Sean checks his gas meter reading. The meter reading is shown below.

2 7 8 6 6 1

1. What is the reading on the meter rounded to the nearest thousand?

2. He checks the reading again six months later. It has increased by 842.
   What is the new meter reading?

Lisa is reading a book. The number of pages she reads each day in one week is shown in a bar chart.
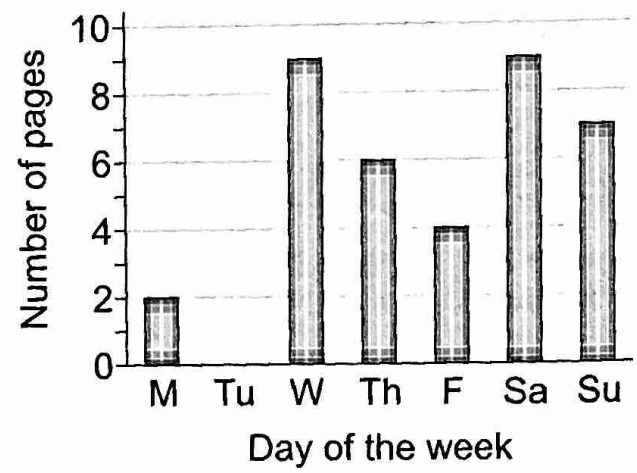

3. How many pages of the book does Lisa read at the weekend?

4. The date on the Monday is 29th April.
   How many pages does Lisa read on 3rd May?

5. What is the volume of a cube with sides of length 5 cm?
Circle the correct option.

    A   25 cm³

    B   125 cm³

    C   100 cm³

    D   15 cm³

    E   50 cm³

Kevin buys a box of corn flakes for £1.40 and some chocolate for £1.50.
Using these ingredients, he makes corn flake cakes, and sells them for £1 each.

6. What's the smallest number of cakes Kevin has to sell in order to make a profit?

7. If Kevin sells ten corn flake cakes, how much profit does he make?

£

8. Each cake is made with 20 g of corn flakes and 15 g of chocolate.
What is the total mass of 60 corn flake cakes? Circle the correct option.

    A   28 000 g

    B   2.1 kg

    C   1.8 kg

    D   2400 g

    E   240 g

9. What is the sum of the only two prime numbers between 50 and 60?

10. Which of the following statements is true? Circle the correct option.

    A $16 \times 30 > 8 \times 60$

    B $15 \times 30 < 30 \times 15$

    C $20 \times 25 = 10 \times 12.5$

    D $18 \times 24 = 9 \times 48$

    E $45 \times 1000 > 900 \times 100$

11. A sequence starts 1, 5, 21, 85, ...
Each term is found by multiplying the previous term by 4 and adding on 1.

Which of these numbers does not appear in the sequence?
Circle the correct option.

    A   341

    B   1365

    C   5461

    D   21 845

    E   87 318

12. Jane uses the formula $E = 8x + 3$ to work out how much money she earns in a day, where E is her earnings in pounds and x is the number of hours worked.
One day she earned £91.

How many hours did she work that day?

hours

/ 12

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1.   On the coordinate grid, point P is moved 7 squares right and 2 squares down.

What are the new coordinates of point P?

(☐ , ☐)

2.   In which of the following numbers does the 6 have the smallest value?
Circle the correct option.

   A   160523

   B   22864

   C   797617.5

   D   8926.53

   E   60.0849

3.   One of the angles in a right-angled triangle is 72°.

Which of the following is also an angle in the triangle? Circle the correct option.

   A   18°

   B   108°

   C   96°

   D   26°

   E   38°

Sundeep has eight pencils on his desk. The lengths of the pencils are listed below.

7 cm, 12 cm, 14 cm, 9 cm, 16 cm, 6 cm, 7 cm, 3 cm

4. Sundeep arranges the pencils in order of increasing length, starting with the shortest on the left. What is the length of the pencil which is fourth from the right?

cm

5. He then picks up the three longest pencils. What is the mean length of these three pencils?

cm

6. Dr. Kapur has a 5 litre jug of water. She pours half on her plants, then gives 1600 ml to patients. How much water is left? Circle the correct option.

| A | 900 ml | C | 0.8 l | E | 1100 ml |
| B | 1.3 l | D | 2400 ml | | |

Julie is watching a film. After 35 minutes, she has watched 25% of the film.

7. What is the total length of the film? Circle the correct option.
    A   2 hours 10 minutes
    B   3 hours 10 minutes
    C   2 hours 45 minutes
    D   1 hour 40 minutes
   E   2 hours 20 minutes

8. Julie starts watching the film at 13:45.
    She pauses the film for 5 minutes halfway through, to make a cup of tea.
    What time does she finish watching the film?
    Give your answer in 24-hour clock format.

:

9. Tony's lasagne recipe is for 12 people, and needs 800 ml of tomato sauce.
   If Tony makes a lasagne for 18 people, how much tomato sauce does he need?

   ☐☐☐☐ ml

10. James wants to run at least 500 m by doing laps
    around the perimeter of a park, shown below.

    50 m

    30 m   Park
    not to scale

   What is the smallest number of whole laps that he must run?

    ☐☐

11. If $4(x + 5) = 44$, what is x? Circle the correct option.

    A 8   **C** 6   **E** 7

    B 11   **D** 35

12. A triangle has sides with lengths a, b and c.

    a b

    c

    Which of the following statements is definitely not true? Circle the correct option.

    A $a + b > c$

    B $c + b = 18$

    C $b > a + c$

    D $0 < b + a$

    E $a < b < c$

    / 12

10

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

Gerard sells four types of sandwich in his cafe.
He records the number of each type of sandwich sold on one day in a pictogram.

Sandwich	Amount sold
Piccalilli	□ □ □ ◤
Ham and cheese	□ □ □ □ □
BLT	□ ▷
Egg mayo	□ □ □ ▷

□ = 4 sandwiches

1. How many more piccalilli sandwiches were sold than BLT on that day?

2. Gerard's profit from selling each ham and cheese sandwich is £1.50.
    How much does he make from selling ham and cheese sandwiches that day?

    £ ◻◻.◻◻

3. Which of the following is the smallest? Circle the correct option.

    A   4%   **C** $^3/_{100}$ **E** $^1/_{20}$

    B   0.65   **D**   0.065

4. An empty steel bucket has a mass of 850 g. When it is filled with sand,
    it has a mass of 16.2 kg. What is the total mass of the sand in the bucket?
    Circle the correct option.

    A   15 550 g   **C**   17 050 g   **E**   14 650 g

    B   15 350 g   **D**   16 950 g

8

5. Tifah makes a cube with sides of length 2 cm out of card. What is the area
    of the net that she needs to make the cube? Circle the correct option.

    A   8 cm²
    B   16 cm²
    C   20 cm²
    D   24 cm²
    E   32 cm²

6. Chris leaves his house, and is out for four hours and twenty minutes,
    before arriving back at his house at 7:15 pm. At what time did he leave his house?
    ⬜⬜:⬜⬜ pm

7. Jonah has a bag with red balls and blue balls. The bag contains twice as many
    red balls as blue balls. What fraction of balls in the bag are blue?
    Circle the correct option.

    A   ¹/₃   C   ²/₃   E   ³/₇
    B   ¹/₂   D   ²/₅

8.

   not drawn
    accurately

    What is the size of angle x?

    ⬜⬜⬜°

9. What is 49 × 138 – 37 × 49?

    ⬜⬜⬜⬜

A sequence is made by joining together squares with sides of length 1.

Shape 1

Perimeter = 4

Shape 2

Perimeter = 6

Shape 3

Perimeter = 8

Shape 4

Perimeter = 10

10. Which expression gives the perimeter of the nth shape? Circle the correct option.

    A $4n$ **C** $3n + 4$ **E** $2n + 2$

    B $4n - 1$ **D** $3n + 1$

11. What is the perimeter of Shape 94?

12.

Rachel has £8. Simon has $12. Who has more money, and by how much?
Use the conversion graph to give an estimate. Circle the correct option.

    A   Rachel has about $0.40 more than Simon.

    B   Rachel has about $0.80 more than Simon.

    C   Rachel has about £1.50 more than Simon.

    D   Simon has about $2.50 more than Rachel.

    E   Simon has about £0.20 more than Rachel.

/ 12

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. The peak temperature in Vanville one year was 18 °C. The lowest temperature in the same year was –25 °C. What was the difference between the highest and lowest temperatures in Vanville that year?

⬜⬜ °C

2. Which number is a factor of both 48 and 27? Circle the correct option.

    A   2

    B   3

    C   4
    D   7

    E   9

3. The heights of Janet's plants are 19 cm, 25 cm, 28 cm and 32 cm. What is the mean height of Janet's plants?

⬜⬜ cm

4. The sizes of three of the angles in a quadrilateral are 47°, 133° and 95°. What is the size of the missing angle? Circle the correct option.

    A   108°

    B   85°

    C   25°

    D   125°

    E   90°

5. Work out the area of the shape below.

7 cm

4 cm

3 cm

not to scale

10 cm

☐☐☐ cm²

6. A company has crates that weigh 14.68 kg each. A shipping container can hold 1024 crates. What is the total weight of the crates in one full container? Circle the correct option.

A   35 191.2 kg

B   15 032.32 kg

C   52 510.8 kg

D   117 493.2 kg

E   205 265.4 kg

The prices of some of the items sold in a DIY shop are shown below.

7. Terry buys a hammer and 50 nails from Di's DIY Shop. How much change does he get from £10?

£☐☐.☐☐

Di's DIY Shop

Hammer   £2.50

Screwdriver   £4.50

10 nails   5p

8. June gets a 10% discount on everything except nails. How much does it cost June for a screwdriver, 30 nails and a hammer?

£☐☐.☐☐

Test 4

9. A shop owner claims that the number of eggs he sold on Sunday is more than double the number he sold on Friday. He uses the chart below to back up his claim.
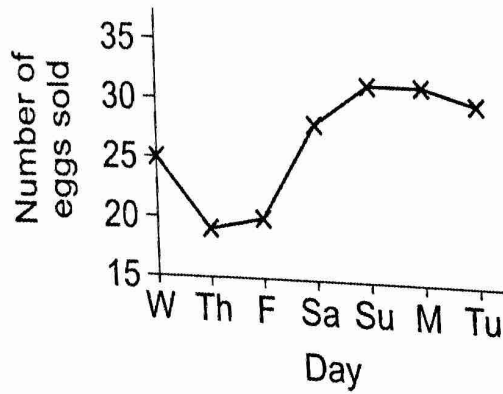

Why is the chart misleading? Circle the correct option.

A It's hard to read the number of eggs sold.

B The numbers don't start at 0.

C The days don't start on Monday.

D The shop is probably open for less time on a Sunday.

E The numbers should go up in 1s or 2s.

Lucy is designing a logo. She makes two identical squares overlap. The overlapping area is also a square, and is $\frac{1}{4}$ of the area of one of the bigger squares.
10. If the overlapping area is 9 cm², what is the area of the logo?

11. What is the perimeter of the logo?

☐☐ cm²

☐☐ cm

12. Sofia is giving out hats at her birthday party. She has five each of red, blue and green hats. The first person is given a blue hat, and the second person is given a green hat. What fraction of the remaining hats are red? Circle the correct option.

A $\frac{4}{15}$ C $\frac{5}{13}$ E $\frac{1}{5}$

B $\frac{3}{13}$ D $\frac{1}{3}$

(/ 12)

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. Use estimating to find 67 132 + 9840.78 + 812.5. Circle the correct option.

   A   17 368.78

   B   77 785.28

   C   166 352.3

   D   107 504.6

   E   2467.898

2. In one season, a football team plays 60 matches. They draw 15% of their matches. How many matches does the team draw?

Mel goes fell-running one day. The graph below shows her distance from home.
3. Mel stops for a rest three times during her run. How long does she stop for the first time she has a rest? Circle the correct option.

   A   30 minutes   C   1 hour, 15 minutes   E   2 hours

   B   1 hour   D   1 hour, 30 minutes

. How long in total does Mel stop for during her run?

   [ ] hours, [ ][ ] minutes

5

14

5. 1 pint = 568 ml. A shop only sells milk in 1 pint cartons.
How many cartons would you need to buy to get at least 6 litres of milk?

☐☐

6. Mrs Rogers has stickers in different shapes. She has four square stickers,
three triangle stickers and one heart sticker.

What fraction of all her stickers are square? Circle the correct option.

   **A** $\frac{1}{8}$ **B** $\frac{1}{3}$ **C** $\frac{4}{9}$ **D** $\frac{3}{7}$ **E** $\frac{1}{2}$

7. A swimming pool has a diving board that is 350 cm above the surface
of the water. The depth of the pool is 4.6 m. What is the distance,
in metres, between the diving board and the bottom of the pool?

☐☐.☐☐ m

8. Shapes 1 and 2 are both made from identical regular hexagons.
In Shape 1, the white space in the middle of the 3 hexagons has an area of 8 cm².
Shape 1   Shape 2

What is the area of the white space in the middle of the 6 hexagons in Shape 2?

☐☐ cm²

9. The test scores of Mr Colin's class are: 8, 21, 22, 13. What is the mean of these scores?

The diagram shows three angles on a straight line.

10. What is the size of angle x?

11. A set of angles all the same size as angle x are put around a point. How many will fit without overlapping?

12. An unfair dice is rolled 36 times. The frequency that each number is rolled is shown in the pie chart.

How many times does the dice land on an odd number? Circle the correct option.

A 4
B 6
C 10
D 12
E 18

/ 12

Time for a break! These puzzles are a great way to practise your maths skills.

Moon, Star, Diamond, Circle

Each shape has a whole number value. Work out the value of each shape, and write the sum of each row and column in the box at the end.

$\text{Moon} = \underline{\quad}$

$\text{Star} = \underline{\quad}$

$\text{Diamond} = \underline{\quad}$

$\text{Circle} = \underline{\quad}$

Circle	Circle	Star	Moon	☐
Moon	Moon	Moon	Moon	36
Star	Diamond	Diamond	Star	18
Star	Moon	Star	Star	☐

☐ 24 ☐ 26

Larry's Test

Larry's class does a test marked out of 100.
All of the scores except Larry's are shown here:

93, 88, 76, 44, 28, ?

What could Larry's score be if:

the difference between the highest and lowest mark is 70? _____

the most common score is 88? _____

the mean score is 55? _____

Kemi cuts the shapes below out of a piece of card.

1. What is the ratio of quadrilaterals to non-quadrilaterals?
   Give your answer in its simplest form.

2. What fraction of the shapes are triangles? Circle the correct answer.

   A $\frac{1}{6}$

   B $\frac{1}{3}$

   C $\frac{2}{3}$

   D $\frac{5}{6}$

   E $\frac{1}{2}$

Daphne bought a painting at an antiques fair for £635.
She sold it one month later for £990.

3. How much profit did she make?

   £

4. Daphne uses her profit to buy blank DVDs. A box of 10 blank DVDs costs £
   How many blank DVDs can Daphne buy with her profit from selling the pain

5. A triangle has one angle of 51° and one angle of 72°.
What is the size of the triangle's third angle? Circle the correct answer.

   A 51°   B 72°   C 123°   D 57°   E 237°

6. The diagram shows the plan of a concrete platform.
   What is the area of the platform?

   ☐☐☐☐ m²

Pete delivers newspapers. The table below shows the number of newspapers
he delivered each day during one week. One of the values is missing.

| Mon	Tue	Wed	Thu	Fri	Sat	Sun
15	15	16	14		30	40

7. One in ten of the newspapers that Pete delivered that week were delivered
on Thursday. How many newspapers did he deliver on Friday?

   ☐☐

8. What percentage of the whole week's newspapers did
Pete deliver on Saturday and Sunday combined?

   ☐☐ %

9. What was the mean number of newspapers he
delivered during the week shown?

   ☐☐

Test 6

10. Sophie sets off from home at 09:00 and jogs to the beach. She then sits on a bench to rest, before jogging home again. The graph below shows her distance from home during her journey.
Circle the time that she sets off back home.

A   09:15

B   09:45

C   10:00

D   10:15

E   10:30

11. What is the sixth term in the sequence shown?

73, 71, 68, 64...

12. Mr Stark has two jars of sweets on his desk.
At the start of the week, each jar contains S sweets.
Mr Stark gives out 30 sweets during the course of the week.
Circle the expression that shows the total number of sweets he has left at the end of the week.

A $30 - 2S$

B $2S - 30$
C $2 - S - 30$

D $30S - 2S$

E   28

Test 7

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. A regular heptagon has sides of length 120 mm.
   What is the heptagon's perimeter?

   ☐☐☐☐ mm

2. Look at the diagram below.

   Circle the best estimate for the size of angle x from the options below.

   A 100°　　　**B** 30°　　　**C** 230°　　　**D** 150°　　　**E** 330°

3. Mikael walks 740 m to the bus stop. He travels 2.5 km on the bus, and then walks another 120 m to his grandparents' house. How far has he travelled altogether, in km? Circle the correct answer.

   A 8.625 km　　**B** 3.2 km　　**C** 3.36 km　　**D** 10.11 km　　**E** 11.1 km

4. Patty is thinking of a number. She subtracts 6 and multiplies the result by 8. The result is 96. What number was she thinking of?

   ☐☐

5. Brian buys a microwave from a supermarket for £70.
   The following week, the supermarket has a sale on electrical items.
   The microwave is reduced by 15%. How much money would Brian have saved if he had bought the microwave in the sale?
   £ ☐☐.☐☐

6. The diagram shows a metal container in the shape of a cuboid.

6 m

15 m

10 m
A builder pours cement into the container until it is $^1/_3$ full.
What is the volume of cement in the container?

☐☐☐☐ m³

Mrs Ormerod asked the members of her class to name their favourite fish.
She recorded the results in the pie chart shown below.

Tuna

45°

Mackerel

Trout

Haddock

Four members of her class said that tuna was their favourite.

7. How many members of her class said that trout was their favourite?

☐☐

8. How many said that either mackerel or haddock was their favourite?

☐☐

9. The *n*th term in a sequence is given by the formula $20 - 4n$.
What is the fifth term in the sequence?

☐☐

The chart below shows the number of games won by each player in a snooker tournament.
10. How many games were won by the person who came third in the tournament?

11. Which three players won a combined total number of games which was the same as the number of games won by Ice? Circle the correct answer.

   A   Tim, Sue and Mel

   B   Tim, Sue and Kym

   C   Sue, Mel and Kym

   D   Sue, Kym and Jen

   E   Mel, Kym and Jen

12. Simone and Callum are collecting conkers.
    Between them, they have collected a total of 29 conkers.
    Which of the following statements could be true? Circle the appropriate letter.

   A   Callum and Simone have each collected the same number of conkers.

   B   Callum has collected half as many conkers as Simone.

   C   Callum and Simone have each collected an even number of conkers.

   D   Callum and Simone have each collected an odd number of conkers.

   E   Callum has collected one more conker than Simone.

/ 12

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. Circle the most suitable unit for measuring the depth of a well.

   A ml   **B** m²   **C** m   **D** m³   **E** mm

2. Sutinder wraps china cups in newspaper to store in his attic.
   One newspaper can wrap up 7 cups.
   How many newspapers does Sutinder need to wrap 161 cups?

Lizzy is drawing a table to show the number of sandwiches sold
in a cafe one lunchtime. She has filled in part of the table.

	White Bread	Brown Bread	Total
Cheese	12		
Turkey		16	35
Total			80

3. How many people chose cheese on brown bread?

4. What fraction of the people chose turkey on brown bread?
   Circle the correct answer.

   **A** ¹⁄₃   **B** ¹⁄₄   **C** ¹⁄₅   **D** ¹⁄₆   **E** ¹⁄₇

5. The shape below is reflected in the dotted mirror line.

The shape and its reflection together make a new shape.
Circle the name of the new shape.

A Pentagon   **C** Quadrilateral   **E** Heptagon
B Hexagon   **D** Octagon

The pictogram shows the number of albums owned by three music fans.

○ = 20 albums

6. How many more albums does Noel own than Jeff?

7. ³⁄₅ of Beth's albums are heavy metal albums. How many albums is this?

8. Noel goes out and buys some new albums, so that he owns the same number of albums as Jeff and Beth put together.
What is the mean number of albums owned by the three music fans now?
9. Look at the diagram shown below.
Which of these points is outside the shaded shape? Circle the correct answer.

A (–2, 0)   B (1, –1)   C (–5, 5)   D (0, –3)   E (4, 0)

10. The diagram below shows a rectangle attached to a right-angled triangle.

a

51°

What is the size of angle a?

□□□

Alicia is a taxi driver. She charges a flat rate of £4 per journey, plus 80p per mile travelled.

11. Circle the formula which gives the amount, A, she would charge in pounds for a journey of d miles.

A $A = 4d + 0.8$ C $A = 4.80d$ E $A = 4 + 0.8d$

B $A = 4 + 80d$ D $A = 480 + d$

12. How much would she charge for a 15 mile journey?

£□□.□□

/ 12

Test 9

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

The timetable below shows the times that a bus stops in five different towns.
The bus always runs exactly on time.

Flarehaven	Poolton	Leveleys	Livham	Vansdell
0900	0946	1021	1059	1132

1. Charles gets on the bus in Poolton.
   How long, in minutes, does it take him to get to Vansdell?
    ☐☐☐ minutes
2. Denise gets on the bus in one town. 35 minutes later, she gets off the bus in another town. Between which two towns did she travel?
    Circle the correct answer.

    A Poolton and Leveleys   D Leveleys and Livham

    B Leveleys and Vansdell   E Livham and Vansdell

    C Poolton and Livham

3. Circle the shape below which is not the same as the others when rotated.
4. Which of the angles below is obtuse? Circle the correct answer.

A   B   C   D   E

5. A stalactite increases in length at a rate of 2 mm per year. Circle the number
    of years it will take to increase from a length of 20 cm to a length of 29 cm.

    A 4.5 years   D 4500 years
    B 45 years   E 45 000 years
    C 450 years

6. What is the angle of the 'Amber' section in the pie chart shown?

   Not drawn accurately

    ☐☐☐ °

A farmer uses 45 kg of hay to feed five horses for one day.

7. How many kilograms of hay would she need to feed 8 horses for one day,
    if each horse eats the same amount of hay?

    ☐☐☐ kg

8. How many horses could she feed for one day with 135 kg of hay?

    ☐☐☐

Six balls, labelled A-F, are placed in a hat. A number of people are asked to pick out a ball at random. The ball is then replaced. The graph shows the number of times each ball was picked.

Frequency

Letter on Ball
9. What fraction of the people picked the ball marked 'D'? Circle the correct answer.

   A $^3/_5$ **B** $^2/_7$ **C** $^4/_9$ **D** $^3/_7$ **E** $^7/_{10}$

10. Bethany is drawing a pie chart to show this data.
     What angle should she use for the 'E' sector?

     ☐☐☐ °

11. Joan is stacking boxes in a pile. Each box is a cuboid with a height of 15 cm and a mass of 0.2 kg. Joan stacks the boxes to a total height of 240 cm.
     What is the total mass of the stack of boxes?

     ☐.☐ kg

12. Raj is thinking of a number. He divides it by 2, subtracts 15, and then multiplies the result by 8. Which of the following expressions shows the result if the number he started with was x? Circle the correct answer.

     A $x \div 2 - 15 \times 8$
     B $(x - 15) \div 2 \times 8$
     C $x \times 8 \div 2 - 15$
     D $x \div (2 - 15 \times 8)$
     E $8(x \div 2 - 15)$

     / 12

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. Ricky buys 3 bags of crisps for 37p each. He pays with a £2 coin.
    How much change does he receive, in pence?

    ☐☐☐ p

A quadrilateral has two sides of length 23 cm and two sides of length 30 cm.
It contains three angles of size 81°.

2. What is the quadrilateral's perimeter?

    ☐☐☐ cm

3. What is the size of the quadrilateral's fourth angle?

    ☐☐☐ °

George carries out a survey. He asks a group of people to say how many fizzy drinks
they each consumed during one week. The pie chart shows the results.

4. What was the most common response?
    Circle the correct answer.

    A 1   **B** 2   **C** 3   **D** 4   **E** 5   **F** 70

5. There were 36 people in the survey.
    How many of them only had 1 fizzy drink during that week?

    ☐☐

6. Look at the sequence of patterns below.

Pattern 1   Pattern 2   Pattern 3   Pattern 4

How many dots will there be in the sixth pattern?

The graph below shows how the temperature of a chemical changed over time during an experiment.

7. After how many seconds did the chemical reach its highest temperature?

s

8. Jeffrey writes down the temperature of the chemical 10 seconds and 20 seconds after the start of the experiment.
What is the difference between the two temperatures he writes down?

°C

The table shows the finishing times, in seconds, of the runners in a 100 m sprint.

Dinah	Tabby	Pam	Debbie	Moirah	Jill	Summer
15.45	14.97	15.21	15.12	15.35	16.01	16.13

9. Circle the option which correctly shows the first, second and third placed finishers.

   A First Place: Tabby   Second Place: Pam   Third Place: Debbie
   B First Place: Jill   Second Place: Debbie   Third Place: Summer
   C First Place: Tabby   Second Place: Jill   Third Place: Summer
   D First Place: Debbie   Second Place: Pam   Third Place: Moirah
   E First Place: Tabby   Second Place: Debbie   Third Place: Pam

10. What was the time difference between the quickest and slowest finishing times?

   ☐☐.☐☐ s

The cost of hiring a floorboard sander from Sandra's Sanders is £60 per day. There is also a one-off hire fee of £150, which covers the whole rental period.

11. Circle the expression which shows the total cost, in pounds, of hiring the sander for n days.

   A $60 + 150n$
   B $210n$
   C $210 + n$
   D $150 + 60n$
   E $150 \times 60n$

12. A rival company, Super Sanderz, charges a one-off fee of £60, plus £80 per day to hire the sander.

   Pat wants to hire a sander for four days.
   How much cheaper would it be to hire a sander from Super Sanderz than Sandra's Sanders?
   £☐☐☐

   ☐ / 12

Time for a break! These puzzles are a great way to practise your maths skills.

Blackboard Blues

Look at the calculations written on the blackboard.

Can you add **one straight line** to each calculation to make them correct?

$$10 - 5 = 15$$
$$111 + 1 = 3$$
$$1 - 3 = 2$$
$$1 + 7 = 14$$
$$5 + 5 + 5 = 550$$

Hint: You can add the straight line to any part of the calculation — symbol or number.

Drawing Straws

The picture below shows nine identical straws arranged to make three equilateral triangles.

Starting with the shape shown, what is the minimum number of moves it would take to rearrange the straws into the following shapes?

- Four equilateral triangles _____ move(s)

- Two equilateral triangles _____ move(s)

- One equilateral triangle _____ move(s)
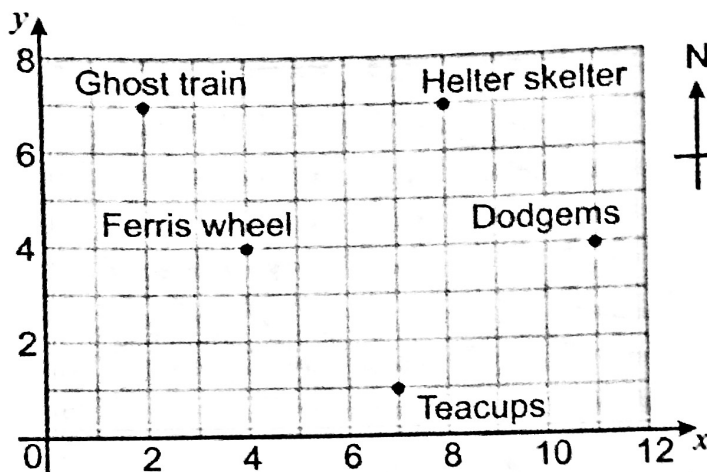

(Repositioning one straw counts as a move.)

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1.   Which of these arrows is pointing to 1.24? Circle the correct answer.

2.   This map shows some of the rides at a funfair.

Craig stands at (7, 4), facing north. He turns 90° anticlockwise.
What can he see? Circle the correct answer.

A   Ghost train

B   Helter skelter

C   Ferris wheel

D   Dodgems

E   Teacups

3.   Ellie buys four bags of flour for £1.20 each. She pays with a £10 note.
How much change does she get?

£ [ ] . [ ] [ ]

4. The diagram shows a parallelogram.

What is the size of angle P?

[ ][ ][ ] °

5. This pie chart shows the results of a survey.
80 people were asked which of four milkshake flavours they prefer.

Key
[ ] Banana
[ ] Strawberry
[ ] Vanilla
[ ] Chocolate

Why is the pie chart misleading? Circle the correct answer.

A   100 people should have been questioned.
B   The sections should be coloured to match the flavours.
C   Only four flavours are included.
D   The chart makes the vanilla section look more important than it should.
E   The key does not list the flavours in alphabetical order.

6. Becky buys ten 330 ml cans of lemonade and two 1.5 litre bottles of cola.
How many litres of drinks does she buy in total?

[ ][ ].[ ][ ][ ] litres

7. Nina, David and Regina sold tickets for a concert. Nina sold 1289,
David sold 1455 and Regina sold 1606. How many tickets did they sell in total?

[ ][ ][ ][ ]

Test 11

Harvey drew the net of a cube of side length 10 cm on a sheet of card, as shown below.
8. What is the area of the original sheet of card?

⬚⬚⬚⬚ cm²

9. What fraction of the sheet is used to make the net? Circle the correct option.

A ³/₅   C ½   E ³/₄

B ⁴/₁₀   D ⅓

10. The mean of five numbers is 180. Four of the numbers are 155, 162, 190 and 198. What is the fifth number?

⬚⬚⬚

Alice is A years old. Barney is twice as old as Alice.
Charlene is 4 years younger than Barney.

11. Which of these expressions represents Charlene's age? Circle the correct answer.

A   A − 2   C   2A + 4   E   2A − 4

B   4 − 2A   D   2(A − 4)

12. Charlene's grandad is three times as old as her. He is 78 years old. How old is Barney?

⬚⬚
/ 12

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. 1562 litres of a new brand of perfume costs £73 414 to make.
    How much does it cost to make 15.62 litres of the perfume, in pounds?

    £ ☐☐☐☐.☐☐

Martina makes the two shapes shown below using identical tiles.
The tiles are equilateral triangles.

Shape 1

Shape 2

2. Shape 1 has a perimeter of 30 cm. What is the perimeter of Shape 2?

    ☐☐ cm

3. Write the perimeter of Shape 2 to the perimeter of Shape 1
    as a ratio in its simplest form.

    ☐☐ : ☐☐

4. In a 'tallest sunflower' competition, the winning sunflower was 5.76 m tall.
    The shortest flower in the competition was 2.89 m shorter than the winner.

    How tall was the shortest sunflower in the competition? Circle the correct answer.

   A   2.73 m   C   2.87 m   E   3.13 m

    B   2.83 m   D   2.89 m

5. Penny and Brian went apple picking.
   Penny collected 1.7 kg of apples. Brian collected 1550 g of apples.

   How many kilograms of apples did they collect between them?

   ☐☐.☐☐☐

Cecilia, Paul and Art made 12 sandwiches.
Cecilia ate $^5/_{12}$ of the sandwiches. Paul ate $^1/_4$ of the sandwiches. Art ate the rest.

6. How many sandwiches did Art eat? Circle the correct answer.

   A 4   **B** 5   **C** 6   **D** 7   **E** 8

7. They also made 4 litres of lemonade. Cecilia drank 25% of the lemonade.
   Paul and Art drank the rest. If Paul drank twice as much as Art, how much
   did Art drink? Circle the correct answer.

   A 1 litres

   B 2 litres

   C 2.25 litres

   D 2.5 litres

   E 3 litres

8. This design has been made with identically-sized grey and white squares.
   How many lines of symmetry does the design have?

9. A group of friends won £6000 in a competition.
   They shared the money equally, and each person received £750.

   How many friends were there in the group? Circle the correct answer.

   A 5   **B** 6   **C** 7   **D** 8   **E** 9

This graph shows the progress of a charity fundraising campaign.
The total amount raised since the start of the campaign was recorded at
the end of each week. They stopped when they reached their target of £4000.
10. How much money was raised during the fourth week? Circle the correct answer.

    A £400   **C** £800   **E** £2100
    B £600   **D** £900

11. If each week they raised the same amount as they did in the first week,
    after how many full weeks would they have passed their target?
    ☐☐ weeks

12. The first five numbers in a sequence are: 100, 98, 94, 88, 80.

    What will the seventh number in the sequence be?

    ☐☐

    / 12

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. A group of people were asked which of six animals would make the best mascot for their local football team. The chart shows the results of the survey.

How many more people answered 'Ape' than answered 'Duck'?

Six competitors took part in a paper aeroplane throwing competition. The tables below show the distance each competitor's aeroplane flew.

Name	Distance
Abigail	18.48 m
Alexei	17.89 m
Cooper	18.25 m

Name	Distance
Li	18.04 m
Dina	17.9 m
Zora	18.31 m

2. The competitors were ranked by their distance, from longest to shortest. Who threw the next longest distance after Cooper? Circle the correct answer.

   A   Abigail

   B   Alexei

   C   Li

   D   Dina

   E   Zora

3. The winner gets £5 for each metre their plane flew, rounded to the nearest metre. How much did the winner get?

£ ☐ ☐ ☐

4. Bella's hens have laid 57 eggs. She puts the eggs into egg boxes. If each box holds six eggs, how many boxes will Bella need?

5. Clive buys 5.5 m of copper wire. He uses 75 cm of the wire.
   How much wire is left? Circle the correct answer.

   A   4.3 m
   B   4.55 m
   C   4.6 m
   D   4.75 m
   E   5.15 m

6. Amber buys a hat in a sale. The hat normally costs £18, but the price has been reduced by 10%. How much does the hat cost in the sale?

   £ ___.___

7. Rudy recorded the temperature in his garden five times during a single day. The temperatures he recorded were 14 °C, 24 °C, 27 °C, 27 °C and 18 °C.
   Which of the following statements is true? Circle the correct answer.

   A   The difference between the hottest and coldest temperatures was 24 °C.
   B   The maximum temperature was 24 °C.
   C   The third-coldest temperature was 24 °C.
   D   The most common temperature he recorded was 24 °C.
   E   The minimum temperature was 24 °C.

8. Jenny walked once around the perimeter of a rectangular field. In total, she walked 2650 m. The length of the field is 850 m. What is the width of the field?

   ____ m

9. What is the size of angle x in the triangle below? Circle the correct answer.

A 30°   B 35°   C 65°   D 85°   E 115°

10. $3m - 7 = 20$. What is the value of m?

$m = $ ☐☐

Lloyd draws the following sketch to show the coordinates of three corners of a rhombus.

11. What are the coordinates of point K?

(☐☐ , ☐☐)

12. Lloyd then draws a horizontal line from K to (13, 8), splitting the rhombus into two triangles. He uses these triangles to find the area of the rhombus. What is the area he calculates? Circle the correct option.

A 8   C 30   E 64

B 16   D 56

/12

9. What is the size of angle x in the triangle below? Circle the correct answer

A 30°   B 35°   C 65°   D 85°   E 115°

10. $3m - 7 = 20$. What is the value of m?

$m = \boxed{}$

Lloyd draws the following sketch to show the coordinates of three corners of a rho

11. What are the coordinates of point K?

$(\boxed{}, \boxed{}$

12. Lloyd then draws a horizontal line from K to (13, 8), splitting the rhombus into two triangles. He uses these triangles to find the area of the rhombus. What is the area he calculates? Circle the correct option.

A 8
B 16
C 30
D 56
E 64

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. Joel is collecting football stickers. There are 121 to collect, and so far he has collected 37. How many more stickers are there for him to collect?

2. How many acute angles are there inside a regular pentagon?

This pictogram shows the number of pupils in each of six classes in a school.

Class 1	⊙⊙⊙⊙◢
Class 2	⊙⊙⊙⊙⊙◖
Class 3	⊙⊙⊙
Class 4	⊙⊙⊙⊙⊙⊙
Class 5	⊙⊙⊙◖
Class 6	⊙⊙⊙⊙◖

| Key |
| ⊙ = 4 pupils |
3. The two smallest classes are combined for a school trip. How many pupils are there in the combined group?

4. ¹⁄₃ of the pupils in Class 4 get ill and can't go on the school trip. How many pupils from Class 4 do go on the trip?

5. Which of the following is equal to $^{23}/_5$?
Circle the correct answer.

   A   5.3   B   4.6   C   5.4   D   3.8   E   3.2

6. Joey starts watching a film at 14:45. The film lasts for 142 minutes. What time will it be when the film ends? Give your answer in 24-hour clock format.

   ☐☐ : ☐☐

7. Harriet makes some purple paint by mixing 1.75 litres of red paint with 480 ml of blue paint and 710 ml of white paint.

   How many litres of purple paint does she end up with? Circle the correct answer.

   A   2.94 litres
   B   1.365 litres
   C   2.79 litres
   D   3.24 litres
   E   2.59 litres

8. What is the volume of this cuboid?

   2.5 cm
   6 cm
   4 cm

   ☐☐☐ cm³
9. Suzy divides a circle into four equally-sized sections. She then divides two of the sections in half. She uses her circle to create the spinner shown below.
What fraction of the whole spinner is made up of star sections?
Circle the correct answer

A $\frac{3}{8}$ B $\frac{1}{4}$ C $\frac{3}{4}$ D $\frac{1}{3}$ E $\frac{3}{5}$

Joan went on holiday. On the second day she took 133 photos. On the third day she took 53 photos. On the fourth and final day she took as many photos as in the first 3 days put together.

10. In total, Joan took 400 photos during her holiday. What was the mean number of photos she took per day?

11. How many photos did she take during the first day?

12. The first four patterns in a sequence are shown below.

How many squares will there be in the eighth pattern in the sequence?

/ 12

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. The parallelogram shown below is reflected in the mirror line.
What are the coordinates of the reflection of point F? Circle the correct answer.

A	(–7, 4)	**C**	(–2, 4)	**E**	(2, –4)
B	(–4, 4)	**D**	(–4, –4)		

2. What number is 9 less than –13? Circle the correct option.

     A   –22   **B**   –4   **C**   4   **D**   6   **E**   22

Seats have been put out in a school hall, ready for a concert.
There are 9 rows of 10 seats and 8 rows of 15 seats.

3. How many seats have been set out in total?

4. The school has a total of 300 seats.
    What percentage of the seats have been set out?

A group of 60 people went on a coach trip. For their lunch, they each had a choice of cheese or ham sandwiches and a choice of an apple or a banana. This table shows the number of people who chose each option.

	Cheese	Ham	Total
Apple		8	
Banana	15		
Total		28	60

5. How many people chose a cheese sandwich and an apple?

6. What fraction of the total number of people had a banana?
   Circle the correct option.

   A $^5/_{12}$ C $^9/_{10}$ E $^2/_3$

   B $^7/_{12}$ D $^{30}/_{40}$

7. Josh is buying a fish tank for his four new tropical fish. Which of the following would be the most sensible choice for the capacity of the fish tank? Circle the correct option.

   A 15 ml   C 500 ml   E 150 000 000 ml

   B 150 ml   D 150 000 ml

8. The programmes shown on a TV channel over a 24-hour period were divided into seven categories. This pie chart shows the proportion of each type of programme.

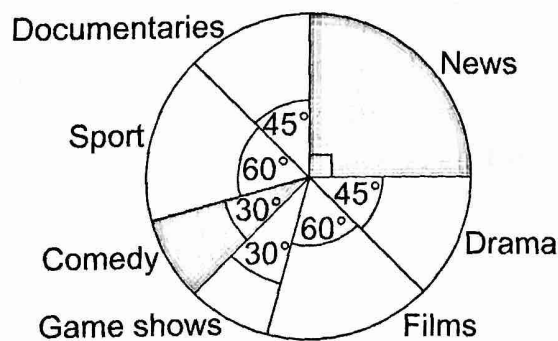

How many hours of sport were shown?

[ ] hours

Test 15

9. For which of the following pairs of dice do both of the faces shown have the same number of lines of symmetry? Circle the correct answer.

A

C

E

B

D
10. Joseph is thinking of a number. He says, "the number is a factor of 66, it is greater than 5, and it is prime".
What number is he thinking of?

11. What is the area of this shape?

9 m

5 m

8 m

13 m

m²

12. A pizza restaurant uses the formula $P = 5 + 0.4t$ to work out P, the price in pounds of a pizza where t is the number of toppings. The chef creates a new recipe with 4 toppings.
What will be the price of this new pizza?

£   .

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. Richard records the colours of all the cars he sees one day in a pie chart.

What is the most common colour that Richard sees? Circle the correct option.

- **A** Black
- **B** Blue
- **C** Silver
- **D** Red
- **E** Cannot tell

2. Chelsea has 1.5 kg of sugar. She divides it into equal piles that each weigh 75 g. How many piles of sugar can Chelsea make?
The ages of Mr Mann's six grandchildren are 13, 10, 6, 3, 3 and 1.

3. What is the mean age of Mr Mann's grandchildren? Circle the correct option.

- **A** 36
- **B** 4
- **C** 6
- **D** 12
- **E** 5.5

4. What was the mean age of Mr Mann's grandchildren two years ago?

What is the size of angle x? The diagram is not drawn accurately.

133° x

☐☐☐ °

A lorry can hold 4096 boxes of chocolate. Each box weighs 807 g.
What is the combined weight, in grams, of all the boxes of chocolate?
Circle the correct option.

| A | 1 886 244 | C | 5 589 636 | E | 9 367 820 |
| B | 3 305 472 | D | 5 987 502 | | |

w is a coordinate grid. The units are in centimetres.
The line L is parallel to the line S and goes through point T.
What are the coordinates of the point where L meets the y-axis?

(☐,☐)

A horizontal line and a vertical line are drawn through point T.
What is the area of the triangle formed by these two lines and line S?

☐☐ cm²

not to be photocopied

9. Cally is thinking of a number. She doubles it, adds four and then doubles it again. She ends up with 44. What number did Cally start with?

10. A rectangular garden has width x m. Its length is 5 m more than its width, as shown, and its area is 126 m².
not drawn accurately

Which equation shows this information? Circle the correct option.

A $x(x + 5) = 126$

B $x + x + 5 = 126$

C $2 \times (2x + 5) = 126$

D $(x - 5)x = 126$

E $x + 5 = 126$

11. There are 240 squirrels in a wood. $\frac{1}{3}$ of them are not grey. Of those that aren't grey, 15% are black. How many black squirrels are there in the wood?

12. John has a bag of 25 sweets, $\frac{1}{5}$ of which are cherry. He picks a cherry sweet out of the bag and eats it. What fraction of the remaining sweets are cherry? Circle the correct option.

A $\frac{5}{24}$

B $\frac{1}{4}$
C $\frac{1}{6}$

D $\frac{4}{25}$

E $\frac{24}{25}$
/ 12

    C   54 cm²
    D   27 cm²
    E   18 cm²

Wayne and Linda work at a guitar shop. The number of guitars they each sold in one week is shown in a line graph.

4. What is the difference in the number of guitars sold by Wayne and Linda on Friday?

☐☐

5. The price of each guitar that Wayne and Linda sold on Monday was £185.45. How much money did they take on Monday from the guitar sales?
£ ☐☐☐☐.☐☐

6. | 459 × 6626 = 3 041 334 |

What is 45.9 × 66.26? Circle the correct option.

A 3.041334

B 30.41334

C 304.1334

D 3041.334

E 30413.34

7. A shop sells 500 g bags of pasta for £1.60, and 1.5 kg bags of pasta for £3.60. Louise needs 3 kg of pasta for a buffet. How much money could she save by buying the 1.5 kg bags?

£ ☐.☐☐

8.

3 ╱‾‾‾‾╲ $2x - 8$ not drawn accurately

6x

What is the perimeter of the triangle above? Circle the correct option.

A $9x + 5$ C $8x - 5$ E $8x + 5$

B $4x + 5$ D $5x - 2$

9. A sequence starts 1, 2, 4, 7, 11, ...
What are the next two terms in the sequence?

☐☐ and ☐☐

10. Which of the following gives the smallest answer? Circle the correct option.

A   10% of 158

B   ½ of 30

C   0.1 × 100

D   ⅔ of 24

E   20% of 90

The sum of the angles in a polygon can be found using the expression $180(x - 2)$, where x is the number of sides of the polygon.

11. What is the sum of the angles in an octagon?

☐☐☐☐ °

12. The sum of the angles in a shape is 1800°.
How many sides does the polygon have?

☐☐☐

/ 12

1. The masses of Sarah's pets are listed below.

   23.5 kg, 8.11 kg, 200 g, 1.1 kg

   What is the difference, in kilograms, between her heaviest and lightest pets?

   ⬜⬜⬜.⬜⬜ kg

2.

   19 cm

   ? cm   not to scale

   The perimeter of the parallelogram is 62 cm.
   What is the length of the shorter side?

   ⬜⬜ cm

   A cup holds 256 ml of water and a bathtub holds 189.4 litres of water.

3. How many cups could you fill from the water in a full bathtub?
   Circle the correct option.

A	739	C	1165	E	341
B	625	D	1373		

4. The bath drains at a rate of 5 litres per minute. How long does it take for a
   full bath to drain completely? Round your answer up to the nearest whole minute.

   ⬜⬜ minutes

5. A poster sold at a museum is a copy of a painting, but at 75% the size of the original. If the poster is 60 cm wide, how wide is the original painting? Circle the correct option.
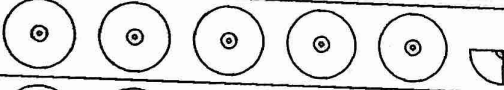

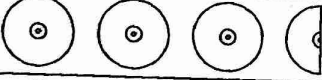

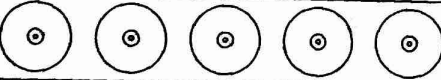

A   45 cm

B   50 cm

C   75 cm

D   80 cm

E   90 cm

6. The museum also sells a postcard version of the painting. It is $1/20$ of the price of the poster. The poster costs £18.00. How much does the postcard cost?

£ ☐☐ . ☐☐

7. Andy records the number of CDs four of his teachers have in their CD collection.

Teacher	Number of CDs
Miss Elliot	
Mrs Robinson	
Miss Jackson	
Miss McKenzie	

⊙ = ? CDs

There are 34 CDs in Mrs Robinson's collection and Miss McKenzie's collection combined. What number should replace the '?' in the key?

☐☐

8. A postman starts his deliveries at 4:20 am. He delivers to two houses per minute, and there are 200 houses on his route. If he has a 20 minute break during his round, what time will he finish?

☐☐ : ☐☐ am

9. What is 7892.3216 rounded to the nearest thousandth? Circle the correct option.

    A   8000

    B   7900

    C   7892.322

    D   7892.321

    E   7892.32

10. On Monday, Miss Leigh marks 50 papers. Each day after that, she marks 5 fewer papers than the day before. How many papers does she mark from Monday to Friday? Circle the correct option.

    A   250

    B   225

    C   200

    D   175

    E   150

11. The diagram below shows three points joined together to form two sides of a shape.
Frank joins the two sides to each of the five crosses in turn, to form five different shapes. How many irregular quadrilaterals are formed as he does this?

12. A rectangular sports pitch needs its perimeter repainting.
Joanna can paint x m of the perimeter every minute.
The pitch is $2x$ m wide, and the length is twice the width.
How long does it take Joanna to paint the perimeter of the pitch?

minutes

/ 12

Test 18

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. How many factors of 30 are also factors of 15? Circle the correct option.

   A   0   **C**   2   **E**   4

   B   1   **D**   3

The table shows the temperature of four cities one day.

City	Temperature (°C)
Oslo	−9
Helsinki	−16
Paris	−1
Rome	11

2. What is the difference between the warmest and coldest temperatures shown?

   ▢▢ °C

3. On the day that these temperatures were recorded, Helsinki was 18.3 °C warmer than its coldest ever temperature.
   What was its lowest ever temperature?

   −▢▢.▢ °C

4. Ellie completes a 400 m race in 80 seconds. It takes Amy 25% longer than Ellie to complete the race. How many seconds does it take Amy to complete the race?

   ▢▢▢ seconds

5. A rectangle has side lengths 4 m and 250 cm. What is its area in m²?
6. There are approximately 35.274 ounces in 1 kg. There are approximately 6.35 kg in 1 stone. Circle the number of ounces in 1 stone.
   A 5.55   C 224   E 828
   B 176   D 0.18

7. A group of people were asked to choose which type of holiday they would like to go on next, out of six different options. The results are given in a bar chart.

   How many more men than women chose skiing?

8. Which of the following shapes has the greatest number of lines of symmetry? Circle the correct option.

   A Isosceles triangle
   B Kite
   C Scalene triangle
   D Rectangle
   E Equilateral triangle

9. Four identical squares with sides of length 5 cm are put together to make a shape where each 'step' from one square to the next is 1 cm.

1 cm →

not to scale

What is the perimeter of this shape?

☐☐ cm

On the coordinate grid is a line and five points labelled A to E.

10. Circle the only labelled point that doesn't form a right-angled triangle or isosceles triangle when joined with the two end points of the line.

11. Two triangles are made — the first one has corners B, D and E, the second one has corners A, D and E. How many times greater is the area of the second triangle than that of the first triangle?

☐

12. In a sequence of dots, there are $\frac{1}{2}n(n + 1)$ dots in the nth pattern. What is the pattern number for the pattern made up of 28 dots? Circle the correct option.

A   5   C   11   E   16
B   7   D   15

/ 12

Test 19

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. A new road is exactly 236 515 cm long. How long is the road in kilometres? Circle the correct option.
    A   0.236515 km

    B   2.36515 km

    C   23.6515 km

    D   236.515 km

    E   2365.15 km

2. Circle the shape below which has a different number of lines of symmetry to the others.

    A   **B**   **C**   **D**   **E**

3. The volume of a triangular prism is:

    | area of triangular face × length |

    5 cm

    9 cm   4 cm

    not to scale

    What is the volume of the triangular prism above?

    cm

4. What is $2140 \times 1.1 + 0.9 \times 2140$?

☐☐☐☐

**5.** The times of five runners who took part in a 200 m race are shown in the table.

Runner	Paula	Andrew	Mohammed	Jenni	Thomas
Time (s)	29.89	47.82	46.95	31.59	28.94

What was the time difference between the fastest and slowest finishers?

☐☐.☐☐ s

6. How many common multiples of 5 and 6 are there between 80 and 100?

☐

The pie chart shows the favourite type of book of 60 people in a book club.

7. How many people said that comedy was their favourite type of book?

☐☐

8. What fraction of the book club said their favourite type of book is a thriller?
Circle the correct option.

   A $\frac{1}{8}$ **C** $\frac{1}{10}$ **E** $\frac{1}{15}$

   B $\frac{1}{9}$ **D** $\frac{1}{12}$

Test 20

9. The Number Cruncher uses a formula to turn one number into another.

When you put x into The Number Cruncher, what comes out?
Circle the correct option.

A $9x$ C $2x + 7$ E $5x + 1$

B $x + 8$ D $5x + 4$

Gregory ploughs a field at a rate of 200 m² per minute,
and trims hedgerows at a rate of 50 m per minute.

10. If he starts ploughing a 300 m × 400 m rectangular field at 9:00 am,
what time will he finish?

☐☐:☐☐ pm

11. The perimeter of the field is a hedgerow. He starts trimming
the hedgerow immediately after finishing ploughing.
What time will he finish trimming the hedgerow?

☐☐:☐☐ pm

12. Keith makes a sequence where every term is greater than the previous term.
To find a term, Keith multiplies the previous term by itself. Which of the following
numbers could Keith have started with? Circle the correct option.

A   −1   C   0.5   E   2

B   0   D   1

/12

Time for a break! These puzzles are a great way to practise your maths skills.

The Chess Tournament

The leaderboard in a chess tournament is shown here:

Some of the players are a bit fussy about who they next play:

Emma says, "I'll only play against another girl."

Hayley says, "I won't play against anyone whose name begins with A."

Andrew says, "If I'm not playing against Mohammed, I'm not playing."

Two people next to each other on the leaderboard can't play each other. Who is playing in the next game?
_____ against _____

Leaderboard	
1st	Aaron
2nd	Mohammed
3rd	Hayley
4th	Emma
5th	Andrew
Pete's Pieces of Pizza
Pete has some pizzas and a pizza cutter that cuts in a straight line.
He makes one cut in Pizza 1, two cuts in Pizza 2, and so on.

Pizza 1   Pizza 2   Pizza 3   Pizza 4
2 pieces   4 pieces   7 pieces   ☐ pieces

Draw cuts onto Pizza 3 to give 7 pieces. (They don't have to be the same size.)
Fill in the box with the maximum number of pieces Pete can make from Pizza 4.

Is there a pattern in the number of pieces that Pete can make?

How many pieces can he make from Pizza 5 and Pizza 6?

Pizza 5 = ☐ pieces   Pizza 6 = ☐ pieces

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. An equilateral triangle has a side length of 4.5 mm. What is its perimeter?

mm

2. Athena is shopping for bargains at a car boot sale.
   She buys four items from the table shown. She spends £14 in total.

| Tea Set £4.00 | Hat £3.20 | Phone £6.00 | Glove £2.00 | Book £0.80 |

Which four items did she buy?

   A   Tea Set, Hat, Phone, Glove

   B   Hat, Phone, Glove, Book

   C   Tea Set, Phone, Glove, Book

   D   Tea Set, Hat, Phone, Book

   E   Tea Set, Hat, Glove, Book

3. Robert has a pile of identical equilateral triangle tiles.
   He places tiles next to each other to make different shapes,
   without the tiles overlapping.
   Which of these shapes can he not make using the tiles? Circle the correct option.

   A   Triangle   **C**   Parallelogram   **E**   Trapezium

   B   Rectangle   **D**   Hexagon

4. A cardboard box weighs 150 g. 24 bags of crisps, each weighing 30 g, are put into the box. What is the total weight of a box filled with 24 bags of crisps?
⬜⬜⬜⬜ g

5. The bar chart below shows the numbers of apples and bananas sold in a grocer's over a period of five months.

Which month had the greatest difference between the number of apples and the number of bananas sold? Circle the correct answer.

A   January

B   February

C   March

D   April

E   May

6. The temperature in Nina's cellar is 8 °C at noon. The temperature in her cellar drops at a steady rate of 1 °C every 30 minutes over the course of the afternoon. What is the temperature in her cellar at 16:30? Circle the correct answer.

A   –1 °C

B   –2 °C

C   –4 °C

D   1 °C

E   0 °C

7. Siobhan starts at 50 and counts back in steps of 12. Which of these numbers will she count? Circle the correct answer.

A   0

B   1

C   2

D   3

E   4

8. Trevor has some square cards, all with the same side length. He uses them to make the shape shown. Some of the cards are cut in half.

←————25 cm————→
What is the area of his shape?

[ ][ ][ ] cm²

Jasmine is on a fishing trip. The mean number of fish she catches each day over the first four days is 7. On the fifth day, she catches 2 fish.

9. What is the mean number of fish she catches over the five days?

[ ][ ]

10. Five of the fish she caught during the first 5 days were salmon. What fraction of the fish she caught over this time were salmon? Circle the correct answer.

A $\frac{5}{28}$ C $\frac{1}{6}$ E $\frac{5}{7}$

B $\frac{1}{5}$ D $\frac{2}{15}$

The diagram shows an L-shaped box.

10 m   7 m

3 m

3 m

5 m

11. What is the volume of the box?

[ ][ ][ ] m³

12. A lid is made to fit on top of the box. Each square metre of the lid weighs 50 kg. What is the weight of the lid?

[ ][ ][ ][ ] kg

(/12)

Test 22

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

At work, Jordi makes himself a cup of tea every hour. Sally makes herself a cup of tea every hour and a half. They both make a cup of tea when they get to work at 09:00.

1. What time will they next both make a cup of tea at the same time?

☐☐:☐☐

2. They both leave work at 17:30. What is the total number of cups of tea that Jordi and Sally make in one day?

☐☐

3. A strip of patterned cloth costs 5p per centimetre.
How much does the strip of cloth shown cost? Circle the correct answer.

A   £0.84   C   £4.00   E   £8.40
B   £0.42   D   £4.20

4. What number will correctly complete the following calculation?

38 + 38 + 38 + 38 = 8 × _____

☐☐

5. A block of butter has a mass of 500 g and costs 99p. Tina buys 6 kg of butter. How much does this cost her?

£ ☐☐ . ☐☐

6. There are 50 packets of crisps on a shelf. 10% are ready salted, $\frac{1}{5}$ are cheese and pickle, 10 are prawn cocktail, and the rest are roast chicken.
What is the most common crisp flavour on the shelf? Circle the correct answer.

A Ready salted

B Cheese and pickle

C Prawn cocktail

D Roast chicken

E Impossible to tell

7. The graph shown converts Cumberland Pounds to Westmorland Dollars.
Cumberland Pounds

Nadine converts 4.50 Cumberland Pounds into Westmorland Dollars.
How many Westmorland Dollars does she receive? Circle the correct answer.

A 2.50   C 3.25   E 5.75

B 3.50   D 4.50

8. Henry and Harriet have 67 racing pigeons between them.
Harriet has 13 more than Henry. How many racing pigeons does Harriet have?

☐☐

9. The diagram shows the lines AB and PQ. AB is perpendicular to PQ.

Which of these could be the coordinates of P and Q? Circle the correct answer.
A $P(3, 3)$ and $Q(8, 8)$

B $P(2, 4)$ and $Q(7, 2)$

C $P(3, 3)$ and $Q(8, 3)$

D $P(4, 2)$ and $Q(8, 4)$

E $P(3, 3)$ and $Q(7, 4)$

Look at the diagram shown below.
not drawn
accurately

10. Circle the expression which correctly describes the angles shown.

A $a + b = 90°$

B $3a + b = 45°$

C $2a + b = 90°$

D $3a + b = 90°$

E $3a + b = 180°$

11. Charmon measures angle a to be $18°$. What is the size of angle b?

⬚⬚⬚ °

12. Zoe is carrying out a survey to find out what people's favourite take-away meal is. 40% of the people she asked said 'kebab'. She draws a pie chart to show the results of the survey. What size angle should she use for the 'kebab' sector?

⬚⬚⬚ °

/ 12

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. The number of people who voted for the winner in a reality TV series was two hundred thousand, five hundred and three. What is this in figures?

2. The bar chart below shows the numbers of different types of vehicle parked at a service station car park.
Which two types of vehicle had a combined total which was the same as the total for 'Bike'? Circle the correct answer.

A Bus and Van   **C** Bus and Car   **E** Van and Lorry

B Car and Van   **D** Car and Lorry

In a shop, each banana costs 18p. Connor buys as many bananas as he can afford.

3. Connor has £2. How many bananas does he buy?

4. The mean mass of each banana that Connor buys is 120 g. What is the total mass of the bananas that Connor buys?

    g

     72

Graeme pours some water into a 500 ml beaker, as shown.

500 ml
Circle the best estimate for the amount of water in the beaker.

A   100 ml

B   250 ml

C   5 ml

D   450 ml

E   1000 ml

6. Find the area of the shape shown.

10 mm

4 mm   22 mm   4 mm
mm²

7. During the first six days of one week, Scott drove a total of 467 miles.
His mean distance driven each day over the full seven-day week was 70 miles.
How many miles did he drive on the seventh day?

miles

8. Donna is training for a marathon. Each week, she increases the distance
she runs. In week 1, she runs 4 miles. In week 2, she runs 6 miles.
In week 3, she runs 8 miles. She continues in this sequence.

In which week will Donna run 26 miles?

Week

9. What fraction of all the faces on a fair six-sided dice show a number which is a factor of 10? Circle the correct answer.

A $\frac{1}{6}$	**C** $\frac{2}{3}$	**E** $\frac{1}{2}$
B $\frac{1}{3}$	**D** $\frac{5}{6}$	

Ronny has four rectangular tiles of size 8 cm × 3 cm and four square tiles with sides of 6 cm. He arranges them to make the pattern shown.
10. What is the perimeter of the octagonal hole at the centre of the shape?

☐☐ cm
11. The tiles cost 10p per square centimetre. How much does it cost Ronny to make the pattern? Circle the correct option.

A £24	**C** £20	**E** £14
B £40	**D** £36	

12. Kylie is mixing red and yellow paint to get the correct shade of tangerine. For every 0.75 litres of red paint, she uses 2.25 litres of yellow paint. She needs a total of 12 litres of paint to decorate her kitchen and bathroom. How many litres of red paint should she buy?

☐.☐ litre(s)

/ 12

Test 24

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. The spinner shown is split into five different lettered sections.
The pointer is turned 270° clockwise from its position shown in the diagram. Which letter is it now pointing to?

Jimi is at an amusement arcade. He gets a £5 note changed into coins. He receives five 50 pence pieces and ten 20 pence pieces. The rest is made up of 10 pence pieces.

2. How many 10 pence pieces does he receive?

3. After a while, Jimi has spent ⁴/₅ of the 50 pence pieces that he received. How much is this?

£ ⬜ . ⬜⬜

4. Theo set off from home at 10:53 and drove to his parents' house. His journey took 2 hours and 42 minutes. What time did he arrive at his parents' house? Circle the correct answer.

A 12:42   C 13:35   E 13:21

B 14:25   D 12:35

Test 24

5. Juliet is buying a coat in the sales. The sales prices of the coat in five different shops are given below. Circle the lowest sales price.

A   50% of £80

B   £38

C $^4/_{10}$ of £80

D $^1/_2$ of £80

E   £32.75

6. Which of the following is the most suitable unit for measuring the distance between two cities? Circle the correct answer.

A   km

B   mm

C   cm

D   m

E   m²

7. Darius is washing cars. He earns £3 for every car he washes. The table shows the number of cars he washes during one week.

Day	Mon	Tue	Wed	Thu	Fri
Number of Cars	5	4	6	7	8

What was the mean amount he earned per day during this week?

£ ⬚⬚

The diagram shows a plastic box and a metal cube.

8. How many of the cubes will fit inside the box?

⬚

9. The box is extended in one direction so that it can fit 1 extra metal cube inside. The minimum amount of space is added. How much does the volume increase by?

⬚⬚ cm³

10. Leo records the eye colours of all the members of his cycling club. He displays his results in the chart shown below.

| Blue | Brown | Green |

0%   20%   40%   60%   80%   100%
What percentage of his cycling club has brown eyes?

☐☐ %

11. David plots the points $A(-5, 5)$ and $B(5, -5)$ on a coordinate grid. He joins them up to form the diagonal line AB. AB passes through the origin $(0, 0)$. Circle the point below which is not on the line AB.

A $(1, -1)$

B $(-1, 1)$

C $(2, 2)$

D $(-2, 2)$

E $(3, -3)$

12. The shape below is a parallelogram.
Circle the expression that gives the shape's perimeter.

A $8x$

B $4x + 2$

C $8x + 2$

D $8x + 4$

E $6x$

/ 12

Test 24

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. Look at the shape below.
The shape is turned 90° anticlockwise. Circle the resulting shape.

A   B   C   D   E
2. Steve creates a sequence using the rule 'multiply the previous number by 3, then subtract 2 from the result'. Circle Steve's sequence from the options below.

   A   1, 2, 4...
   B   2, 4, 10...
   C   2, 4, 8...
   D   3, 9, 27...
   E   3, 7, 18...

3. The price list for a barber's shop is shown below.

   ✂ **GAVIN'S** ✂
   Buzz Cut   £5.50
   Flat Top   £9.00
   Mohawk   £

One weekend, Gavin does 10 buzz cuts, 5 flat tops and 4 mohawks. He earns £144. How much does Gavin charge for a mohawk?

£ ☐☐.☐☐

Two equilateral triangles each have a perimeter of 45 cm.
Toby joins them together as shown, to create a rhombus.
4. What is the perimeter of Toby's rhombus?

☐☐ cm

5. How many more rhombuses does Toby need to make so that they will fit together to make a regular hexagon?

☐

6. The graph shows the number of fish caught when using two different brands of fishing rod on a fishing trip.

Angler's Dream

Fish-o-matic

0 2 4 6 8 10 12 14
Number of Fish Caught
Why is the graph misleading? Circle the correct statement.

A   It is impossible to catch 12 fish in one day.

B   Not everyone likes fishing.

C   The area for Fish-o-matic is more than 3 times the area for Angler's Dream.

D   The horizontal axis values don't increase evenly.

E   Only two brands of rod were tested.

7. Rose is thinking of a number. Her number rounded to the nearest 10 is 1110.
Circle the smallest number she could be thinking of.

A   1110   C   1105   E   1104

B   1100   D   1115

8. Rhoda is drawing a pictogram to show the number of eggs laid by her hens each month. She uses the key shown below.

$\bigcirc$ = 4 eggs
In January, her hens laid 35 eggs. How many egg pictures should she use in the pictogram for January? Circle the correct answer.

A   10

B   9

C $8^{1}/_{2}$

D $7^{1}/_{4}$

E $8^{3}/_{4}$

9. Find the size of angle x, shown below.
10. Shirley is making a cottage pie. She usually uses 450 g of mince for 5 people. Today she is cooking for 8 people. How many grams of mince does she need?

Gina has a collection of stamps. One fifth of all her stamps are from Britain, one third are from France, and one quarter are from Sweden.

11. Which of the following could be the number of stamps in Gina's collection? Circle the correct answer.

A   50

B   40

C   30

D   60

E   20

12. She sells some of her collection for £31.25, which is two and a half times the face value. What is the face value?

£

Puzzles 5

Maths Crossword
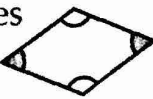

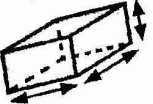

Use the clues given to complete the crossword.
One of the clues has been done for you.
Across

1. A quadrilateral with one pair of parallel sides.
4. The number of sides in a quadrilateral.
6. Using letters to represent numbers. $2x + 1$
8. An eight-sided shape.
9. A 3D shape with triangular faces that meet at a point.
12. A three-sided shape.
15. A 3D shape with the same face at both ends.
17. An angle between 0° and 90°.
21. The top half of a fraction.
22. A 2D shape that folds to create a 3D shape.
23. A circular graph that shows the proportions of different values. (2 words)
24. A triangle with no equal sides or angles.
25. Two lines that will never meet.

Down

2. An amount measured in g or kg.
3. A number which divides exactly into another number.
5. A 2D shape with 4 equal sides and 2 pairs of parallel sides.
7. The order of operations.
8. An angle between 90° and 180°.
9. A chart that uses symbols.
10. The bottom half of a fraction.
11. A shape with sides of equal length and equal angles.
13. A triangle with two equal sides and two equal angles.
14. The units used to measure angles.
15. A number which only has itself and 1 as factors.
16. Average found by adding and dividing.
18. 100 cm.
19. The space in a 3D shape.
20. The space in a 2D shape.

Puzzles 5

(10)

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. A sequence begins 55, 45, 35, ... What is the fifth term in the sequence?

2. A fair spinner numbered 1-6 is spun.
What fraction of the spinner is numbered with a factor of 12?
Circle the correct answer.

A $\frac{1}{2}$ B $\frac{1}{6}$ C $\frac{5}{6}$ D $\frac{1}{3}$ E $\frac{2}{3}$

3. The graph below shows the population of the city of Balonia over time.
Use the graph to find the approximate population of Balonia in 1910.
Circle the correct option.

A 80 000 people

B 90 000 people

C 160 000 people

D 180 000 people

E 190 000 people

82

Mrs Biggs asked each pupil in her class how many siblings they have.
She put the results in a bar chart.
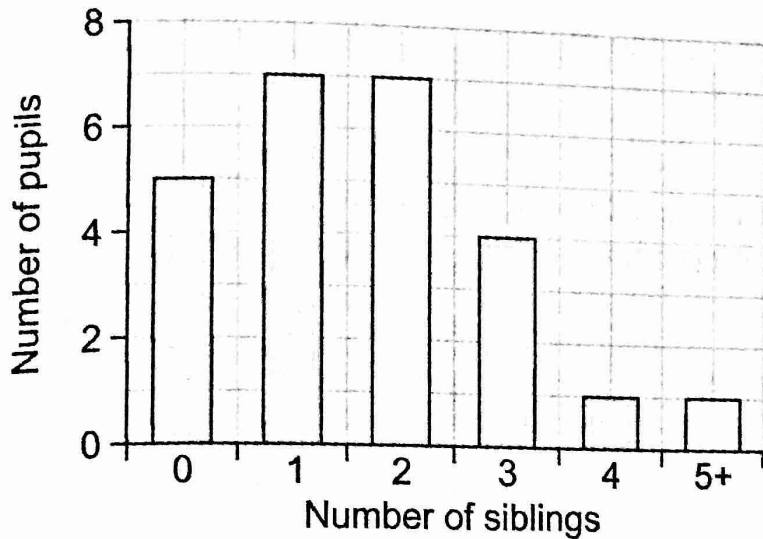

4. What percentage of the class have at least 5 siblings?

☐☐ %

5. Circle the statement below which could be false.

   A   There are 25 pupils in Mrs Biggs' class.
   B   One pupil has five siblings.
   C   Six pupils have at least three siblings.
   D   One in five pupils don't have any siblings.
   E   Twelve pupils have fewer than two siblings.

A recipe says, 'Cook a chicken for 25 minutes, plus 5 minutes for every 100 g it weighs.'

6. Audrey has a chicken that weighs 1.1 kg. How long should she cook it for?
   Circle the correct option.

   A   50 minutes   D   1 hour 10 minutes
   B   1 hour 20 minutes   E   1 hour 50 minutes
   C   2 hours 25 minutes

7. Edward works out that he needs to cook his chicken for 2 hours and 5 minutes.
   How many grams does his chicken weigh?

☐☐☐☐ g

Cp — not to be phot...

Tim makes a table. Each of the 4 legs has the dimensions 4 cm × 4 cm × 50 cm. The top is 20 cm × 20 cm × 1 cm.

8. What is the volume of the material used to make the table?

cm³

9. The material that Tim uses costs 5p per cm³. How much does it cost him to buy enough material to make the table?

£ ☐☐☐☐ . ☐☐

10. Mark has two identical triangles. Each triangle has sides with lengths of 5 cm, 9 cm and 13 cm. He joins the shortest sides together to form a parallelogram. What is the perimeter of the parallelogram?

cm

Ethan has an extra-long strawberry lace. He cuts it in half and gives one half to his big sister. He cuts the other half into three equal pieces and gives two of them to his little brother to eat. He keeps the rest.

11. What fraction of the strawberry lace does Ethan keep? Circle the correct option.

A   ½
B   ²/₆
C   ⅓
D   ⅙
E   ⅔

12. Each extra-long strawberry lace is made from 12 real strawberries. How many strawberries does Ethan's little brother eat?

Test 27

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. What percentage of the grid below has been shaded?

☐☐ %

2. Barry, Mick and Alex were born in the same year.
Barry was born on 25th September, Mick was born on 12th June,
and Alex was born on 1st August.

How many days older than the youngest person is the oldest person?

☐☐☐ days

Xan buys 5 bags of sweets. The numbers of sweets in each bag are listed here.

8, 6, 8, 8, 11

3. Which of the following statements is true? Circle the correct option.
   A   The total number of sweets is a square number.
   B   The total number of sweets is a multiple of 40.
   C   The total number of sweets is a prime number.
   D   The total number of sweets is a factor of 100.
   E   None of the above.

4. Xan buys another bag of sweets, which takes the overall mean number
   of sweets to 9. How many sweets are in this new bag?

☐☐

A group of people were asked whether they went on holiday last year.
The results are shown in a pie chart.

No   Yes
   200°
not drawn accurately

5. What fraction of the group said that they did go on holiday last year?
   Circle the correct option.

   A $^7/_{10}$ **B** $^4/_7$ **C** $^5/_6$ **D** $^2/_3$ **E** $^5/_9$

6. Sixteen people said that they did not go on holiday last year.
   How many people said that they did?

The total area of all the faces of a cube is 54 cm².

7. What is the cube's side length?

8. What is the cube's volume?

cm

cm³

9. On a coordinate grid, a counter is placed at the point with coordinates (–4, 5).
   The counter is moved two squares to the right, then diagonally across one square.
   Which of these points is the counter definitely not at? Circle the correct option.

   A (–1, 6)   **B** (–3, 4)   **C** (–3, 6)   **D** (–2, 6)   **E** (–1, 4)

©

10. One of the angles of a parallelogram is 111°.
What is the size of another of the angles that isn't 111°?

 °
11. Four identical regular octagons are placed together to make the shape below.
The square formed in the middle has a perimeter of 20 cm.
What is the outer perimeter of the shape? Circle the correct option.

A   84 cm   B   95 cm   C   100 cm   D   116 cm   E   125 cm

12. A type of plant pot can stack neatly, as shown below.

$\updownarrow$ 3 cm

8 cm
What is the height, in cm, of a stack of x pots? Circle the correct option.

A $11x$

B $3x + 8$

C $8x + 3$

D $8 + 3 + x$

E $5x$

/ 12

1.

Fruit Shop	
Apple	15p
Pineapple	95p

Joan buys a pineapple and three apples. How much does she spend?

£ ☐ . ☐☐

2. Circle the shape below which has the greatest number of lines of symmetry.

A B C D E
3. Which of these is equal to three thousand and twenty-five millilitres? Circle the correct answer.

A 3.025 litres   C 3025 litres   E 0.3025 litres

B 3.25 litres   D 0.325 litres

4. A cuboid has a length of 14 m, a width of 2 m and a volume of 280 m³. What is the cuboid's height?

☐☐☐ m

5. A crystal glass costs £17.50. A set of 4 glasses costs £56. What is the saving you would make by buying a set, instead of 4 individual glasses? Write your answer as a percentage.

☐☐ %

The diagram below shows a pumpkin, a jar of peanut butter and a jar of mustard.
6. What is the mass of the pumpkin?

☐.☐☐ kg

7. Brett buys the pumpkin, three jars of peanut butter and three jars of mustard. What is the total mass of his purchases?

☐☐.☐☐ kg

The chart below shows the total number of goals scored by all the teams in the first five rounds of an ice hockey tournament. The vertical axis has been left blank.

Number of Goals

Tournament Round
8. Which round had the third highest number of goals? Circle the correct answer.

A 1   B 2   C 3   D 4   E 5

9. Which of these sets of data could be the numbers of goals scored in these five rounds? Circle the correct answer.

A 28, 71, 21, 84, 96   D 90, 51, 10, 66, 89
B 24, 68, 40, 90, 99   E 12, 24, 10, 35, 30
C 30, 11, 19, 77, 88

10. Pam is sorting pencils into pencil pots. Each pot can hold 9 pencils.
    She fills each pencil pot before moving on to the next one.
    She has 570 pencils in total.

    How many pencils will she put in the last pencil pot?

11. Ken has drawn the graph below to help him convert between miles and kilometres.
    He completes a 25 km run for charity.
    Use the graph to estimate how many miles Ken has run. Circle the correct answer.

    A   25 miles
    B   50 miles
    C   20 miles
    D   15 miles
    E   5 miles

12. Circle the expression below which is not equivalent to the others.

    A $12x \div 2$
    B $4x + 2$
    C $6x$
    D $3x \times 2$
    E $7x - x$

/ 12

Test 29

Two angles add up to make a right angle. One of them is 83°.
What is the other angle?

☐☐☐ °

Nikki thinks of a number and divides it by 3. The remainder is 2.
Which of these could have been her original number? Circle the correct answer.

A 31

B 60

C 25

D 23

E 16

A sheet of card has a thickness of 0.5 mm.
Diego piles these sheets to a height of 8 cm.

How many sheets of card are in his pile?

☐☐☐☐

Each sheet of card has a mass of 5 grams.
Diego puts his pile of cards into a box of mass 250 g.
What is the total mass of the box now it contains the pile of cards?
Circle the correct answer.

A 1250 g

B 950 g

C 1000 g

D 1050 g

E 850 g

The diagram below shows the point A with coordinates $(-5, 4)$.
5. Point A is translated 8 squares east and 4 squares south, to give point B. What are the coordinates of B?

(⬚⬚ , ⬚⬚)

6. Point B is reflected in the y-axis, to give point C. What are the coordinates of C? Circle the correct answer.

    A $(0, -3)$ **B** $(0, 3)$ **C** $(-3, 0)$ **D** $(3, -3)$ **E** $(-3, 3)$

7. Althea is thinking of a number. She says, 'the number is a factor of 60, a multiple of 5, and 1 less than a square number'. Which of these is the number she is thinking of? Circle the correct answer.

    A   10

    B   3

    C   35

    D   48

    E   15

A recipe uses 100 g of flour, 100 g of sugar and 80 g of butter.

8. Damian has 120 g of butter, and wants to use it all in this recipe. What total weight of flour and sugar should he use, in grams?

⬚⬚⬚ g

9. Damian realises he only has 60 g of sugar, so can't use all of his butter. How many grams of butter will he have left over when he's finished making the recipe?

⬚⬚⬚ g

10. Circle the statement below which is incorrect.

A   2% is equivalent to 0.02

B   0.25 is equivalent to $\frac{1}{4}$

C $\frac{4}{10}$ is equivalent to 40%

D $\frac{3}{5}$ is equivalent to 0.6

E   35% is equivalent to 3.5

11. The first six terms in a sequence are 1, 4, 9, 16, 25 and 36. What is the eleventh term in the sequence?

12. Sheryl cuts a triangle from a rectangular piece of card, as shown.
What is the area of the shape left over? Circle the correct answer.

A   60 m²

B   54 m²

C   44 m²

D   46 m²

E   32 m²

/ 12

You have **10 minutes** to do this test. Work as quickly and accurately as you can.

1. Liam asks the members of his art class to name their favourite material to work with. He displays the results in the pie chart shown.
There are 28 people in his art class.
How many people said that paint was their favourite?

2. Jamie sets off from home at 13:30. He drives for 25 minutes, stops at a service station for 10 minutes, and then drives for a further hour and a half before arriving at his destination. What time does he arrive? Circle the correct answer.

A	14:05	C	15:25	E	14:50
B	15:35	D	15:05		

3. The shape shown below is made out of seven cubes.
Circle the option below which shows the view when looking down from directly above the shape.

A   B   C   D   E
Aiden has 3 stripy ties, 5 spotty ties and 12 plain ties.

4. What fraction of his ties aren't spotty? Circle the correct answer.

A ³/₂₀   B ¹⁷/₂₀   C ³/₄   D ¹/₄   E ³/₅

5. What is the ratio of plain ties to stripy ties? Give your answer in its simplest form.

$$\boxed{}\boxed{} : \boxed{}\boxed{}$$

6. The shape shown is reflected in the dotted mirror line.
What is the new position of vertex P? Circle the correct answer.

A   (1, 4)

B   (4, 1)

C   (11, 4)

D   (12, 4)

E   (10, 4)

Elise and Lara have a total of 120 trading cards between them.
Elise has three times as many as Lara.

7. How many does Elise have?

$$\boxed{}\boxed{}\boxed{}$$

8. Rashid has twice as many cards as Elise. What percentage of all of Elise, Lara and Rashid's cards belong to Rashid?

$$\boxed{}\boxed{}\ \%$$

9. Sebastian cycles a total of 120 miles over a period of 5 days. What is the mean distance he cycles each day?

 miles

10. The shape below is made by cutting a rectangle from a larger rectangle.

9 m

$y + 2$
Circle the expression below which gives the shape's perimeter.

A $22 + 4y$

B $11 + 2y$

C $22 + 2y$

D $20 + y$

E $11 + y$

11. The formula for finding the nth term in a sequence is $10 - 4n$. What is the third term in the sequence? Circle the correct answer.

A   7

B   –33

C   3

D   –2

E   –4

12. Which number term in the sequence has value 2?

 / 12

Test 31

You have 10 minutes to do this test. Work as quickly and accurately as you can.

Jasmine sells 120324 copies of her new novel in its first week.
What is this figure in words? Circle the correct answer.

A   one hundred and twenty three thousand and twenty four

B   twelve thousand, three hundred and twenty four

C   one hundred and twenty thousand, three hundred and twenty four

D   one million, two hundred thousand, three hundred and twenty four

E   one hundred and twenty million, three hundred and twenty four thousand

Marissa is painting the front of a wooden gate. The front of the gate is a rectangle with sides of length 3 m and 4 m. She buys a tin of paint which will cover an area of 48 m². What fraction of the tin of paint is left over when she has finished?
Circle the correct answer.

A $\frac{1}{5}$ B $\frac{1}{4}$ C $\frac{3}{5}$ D $\frac{3}{4}$ E $\frac{1}{2}$

George is reading a book which has 860 pages.
He reads at an average rate of two pages per minute.
Since starting the book, he has read for 1 hour and 20 minutes.

How many pages does he still have left to read?

A square has a perimeter of 48 m. What is its area? Circle the correct answer.

A   48 m²   D   132 m²

B   12 m²   E   96 m²

C   144 m²

Madison's bookshelf contains 200 books. 22% of her books are horror stories, 37% are sci-fi stories, and the rest are non-fiction.

5. How many of her books are non-fiction?

6. 34 of all her books are hardback.
What percentage of her books is this?

7. The diagram below shows an isosceles triangle.
What is the size of angle *a*?

8. The pictogram below shows the amount of time Henry spent playing different sports during one week.

| Football | Basketball | Tennis | Baseball |
Key:
1 ball = 60 minutes

How many more minutes did Henry spend playing basketball than baseball during this week?

minutes

9. The table below shows the number of pairs of different kinds of footwear in Reuben's wardrobe.

Type	Number of pairs
Smart shoes	2
Boots	5
Trainers	8
Slippers	1

What fraction of his footwear collection is either boots or slippers? Circle the correct answer.

A $^1/_{16}$

B $^1/_4$

C $^1/_2$

D $^3/_8$

E $^5/_{16}$

Malcolm thinks of five numbers. He writes four of them down:

13, 7, 9, 16

He says, 'the mean of the five numbers is 12'.

10. What is the fifth number Malcolm was thinking of?

11. Malcolm thinks of a sixth number. The mean is now 10. What is the sixth number?

12.

$$x^2 > 2 \times 25 - 1$$

x is a positive whole number.
What is the smallest number that x could be?

/ 12

Time for a break! These puzzles are a great way to practise your maths skills.

Equal Shapes

Split each shape on the right in half to make two identical smaller shapes.
Elevenses

Amelia writes down a trick to find out if a number will divide exactly by 11. She uses the trick to show that 3091 divides exactly by 11:

1. Add together all the digits in the even positions:

   3091   0 + 1 = 1

2. Add together all the digits in the odd positions:

   3091   3 + 9 = 12

3. Subtract the smaller sum from the larger sum:

   12 − 1 = 11

4. If the result is 0 or a multiple of 11, then the number divides exactly by 11. ✔

Use Amelia's trick to answer the following:

- Does 29 524 divide exactly by 11?
- Does 312 581 divide exactly by 11?
- What is the only number between 2 165 860 and 2 165 869 that divides exactly by 11?

Test 1 — pages 2-4

1. 279 000
The number in the hundreds column is 6, which is greater than five, so you round the thousands up. This gives 279 000.

2. 279 503
The new reading is 278 661 + 842. You can use the column method to find this:

```
  278661
     842
+ ‾‾‾‾‾‾‾
  279503
    11
```

3. 16
Lisa reads 9 pages on Saturday and 7 on Sunday. So at the weekend Lisa reads 9 + 7 = 16 pages.

4. 4
There are 30 days in April, so Tuesday will be 30th April, Wednesday will be 1st May, Thursday will be 2nd May, and Friday will be 3rd May. On Friday, she reads 4 pages.

5. B
The cube measures 5 cm × 5 cm × 5 cm. So its volume is 5 × 5 × 5 = 125 cm³.

6. 3
Kevin spends £1.40 + £1.50 = £2.90 on ingredients. To make a profit he needs to sell enough to get at least £2.90. So at £1 each, he needs to sell three cakes.

7. £7.10
Kevin spends £2.90. He sells ten cakes for £1 each, so he makes £1 × 10 = £10. So his profit is £10 – £2.90. You can use the partitioning method here: £10 – £2 = £8 and £8 – £0.90 = £7.10.

8. B
Each cake has a mass of 20 g + 15 g = 35 g. So the mass of 60 cakes is 35 g × 60. Break 35 into 30 + 5. 30 g × 60 = 1800 g, 5 g × 60 = 300 g, so 35 g × 60 = 1800 g + 300 g = 2100 g, which is equal to 2.1 kg.

9. 112
Other than 2 and 5, all prime numbers end in 1, 3, 7 or 9. So look at 51, 53, 57 and 59. 51 and 57 both divide by three so they are not prime. The question says there are two prime numbers in this range. So the only prime numbers between 50 and 60 are 53 and 59. Add them together to give 53 + 59 = 112.

10. D
A is false because 16 × 30 = 8 × 60.
B is false because 15 × 30 = 30 × 15.
C is false because 20 × 25 = 10 × 50 > 10 × 12.5.
E is false because 45 × 1000 = 450 × 100 < 900 × 100. D is true as 18 = 9 × 2, and 48 = 2 × 24, so you can write the equation as 9 × 2 × 24 = 9 × 2 × 24.

11. E
The terms in the sequence will all be odd, because you're adding 1 to a multiple of 4 (which is even). 87 318 is even, so cannot appear in this sequence.

12. 11 hours
If 8x + 3 = 91, then a number multiplied by 8 gives 3 less than 91, i.e. 8x = 91 – 3 = 88. The only number that multiplies by 8 to give 88 is 11, so x = 11.

M6XPDE1

Test 2 — pages 5-7

1. (9, 4)
Moving 7 squares to the right gives an x-coordinate of 9. Moving 2 squares down gives a y-coordinate of 4. So the coordinates are (9, 4).

2. D
None of the options have the 6 to the right of the decimal point. So you're looking for the option where the 6 is closest to the decimal point (or where the decimal point would be), which is D.

3. A
The angles in a triangle add up to 180°. It is a right-angled triangle, so one of the angles is 90°. So the missing angle is 180° – 72° – 90° = 18°.

4. 9 cm
Putting the pencils in order gives: 3, 6, 7, 7, 9, 12, 14, 16. So the fourth from the right has length 9 cm.

5. 14 cm
The three longest pencils have lengths 12 cm, 14 cm and 16 cm. Adding these gives a total of 42 cm. Dividing 42 cm by 3 gives 14 cm (use partitioning).

6. A
Half of 5 litres is 5 ÷ 2 = 2.5 litres, which is equal to 2500 ml. Subtracting 1600 ml from this gives 2500 – 1600 = 900 ml (use partitioning or the column method).

7. E
25% of the film is 35 minutes. 100% of the film is four times this: 35 × 4 = 140 minutes. There are 60 minutes in an hour, so 140 mins = 2 hours 20 mins.

8. 16:10
2 hours after 13:45 is 15:45. 20 minutes after this is 16:05 (split it up into 15 minutes + 5 minutes). Adding on the 5 minute break then gives a finishing time of 16:10.

9. 1200 ml
This is an extra 6 people, which is an extra half of the amount in the recipe. The recipe needs 800 ml tomato sauce, so Tony needs an extra half of this: 800 ÷ 2 = 400 ml. Adding this on gives 800 + 400 = 1200 ml.

10. 4
The horizontal sides add up to give two lots of 50 m, and the vertical sides add up to give two lots of 30 m. The perimeter is 2 × 50 + 2 × 30 = 100 + 60 = 160 m. 3 × 160 = 480, so James needs to do one more lap to have run over 500 m. So he needs to run 4 laps.

11. C
4(x + 5) = 44 means that 4 multiplied by a number gives 44. 4 × 11 = 44, so the bit in the brackets is equal to 11. If x + 5 = 11, then x = 6.

12. C
a + b will always be bigger than c, otherwise the sides a and b won't be long enough to make a triangle. So option A is always true. Option B could be true. b can't be greater than a + c for the same reason that option A is true. So option C is definitely not true. Two lengths added together will always be greater than 0, so D is true. E could be true.

Test 3 — pages 8-10

1.   9
In the 'Piccalilli' row there are $3\frac{1}{2}$ squares. So there were $3\frac{1}{2} \times 4 = 14$ piccalilli sandwiches sold (you can work this out using partitioning). In the 'BLT' row there are $1\frac{1}{4}$ squares, so there were $1\frac{1}{4} \times 4 = 5$ BLT sandwiches sold. The difference is $14 - 5 = 9$.

2.   £30.00
There are 5 squares in the 'Ham and cheese' row, so Gerard sold $5 \times 4 = 20$ ham and cheese sandwiches. Each one gives a profit of £1.50, so he made £1.50 $\times$ 20 = £30 (use partitioning here).

3.   C
$4\% = 0.04$, $\frac{3}{100} = 0.03$ and $\frac{1}{20} = \frac{5}{100} = 0.05$. Option B has a 6 in the tenths column so it's bigger than the other four options, which all have a 0 in the tenths column. Out of these four options, 0.03 has the smallest number in the hundredths column, so $\frac{3}{100}$ is the smallest.

4.   B
There are 1000 g in 1 kg, so 16.2 kg = 16 200 g. To find the mass of just the sand, subtract the mass of the bucket. 850 breaks down into $800 + 50$. $16\,200 - 800 = 15\,400$. $15\,400 - 50 = 15\,350$. So the sand has a mass of 15 350 g.

5.   D
The cube has side length 2 cm, so on the net, one face has area $2 \times 2 = 4$ cm². There are six identical faces on a cube, so the total area is $4 \times 6 = 24$ cm².

6.   2:55 pm
Four hours before 7:15 pm is 3:15 pm. 20 minutes before 3:15 pm is 2:55 pm.

7.   A
There are twice as many red balls as blue balls. So for every blue ball, there are 2 red balls, and so out of every 3 balls, 1 is blue. As a fraction, this is $\frac{1}{3}$.

8.   64°
Angles in a quadrilateral add up to 360°. Find the sum of the angles given: $49° + 31° = 80°$. And $216° + 80° = 296°$. So the missing angle is $360° - 296° = 64°$.

9.   4949
Both parts of the calculation are multiplied by 49. So you've got '138 lots of 49' minus '37 lots of 49', which gives $138 - 37 = 101$ lots of 49, or 101×49. $49 \times 100 = 4900$, and $49 \times 1 = 49$. So $49 \times 101 = 4900 + 49 = 4949$.

10.   E
The sequence of the perimeters of the shapes goes: 4, 6, 8, 10, ... So you're adding two each time. So the first part of the expression is $2n$. Shape 1 has a perimeter of 4. $2n = 2 \times 1 = 2$, so you need to add 2 to get 4. So the expression is $2n + 2$.

11.   190
Using the expression that you've just worked out, put 94 into $2n + 2$: $2 \times 94 + 2 = 188 + 2 = 190$.

12.
Rachel has more, so you can rule out options D and E. In pounds, Rachel has about £0.50 more. In dollars, she has about $0.80 more. So the answer is option B.

Test 4 — pages 11-13

1.   43 °C
The difference between –25 °C and 0 °C is 25 °C, and the difference between 0 °C and 18 °C is 18 °C. So the difference between –25 °C and 18 °C is $25 + 18 = 43$ °C.

2.   B
The only factors of 27 are 1, 3, 9 and 27. 3 is also a factor of 48, and 9 is not, so the answer is option B.

3.   26 cm
Add together all the heights of the plants and divide by the number of plants. $19 + 25 + 28 + 32 = 104$ cm. $104 \div 4 = 26$ cm. (You can use partitioning here.)

4.   B
The angles in a quadrilateral add up to 360°. $47 + 133 + 95 = 275°$ (use the column method). Subtracting this from 360 gives $360 - 275 = 85°$.

5.   36 cm²
This is made of a rectangle and a triangle. The rectangle has area $3 \times 10 = 30$ cm². The base of the triangle is $10 - 7 = 3$ cm, so its area is $\frac{1}{2} \times 3 \times 4 = \frac{1}{2} \times 12 = 6$ cm². So the total area is $30 + 6 = 36$ cm².

6.   B
Use estimation — round 14.68 kg to 15 kg and round 1024 to 1000. So one full shipping container weighs about $15 \times 1000 = 15\,000$ kg. Option B is the only option close to this, so the answer is 15 032.32 kg.

7.   £7.25
10 nails cost 5p, so 50 nails cost $5 \times 5p = 25p$. A hammer costs £2.50, so the total cost is £2.50 + 25p = £2.75. So his change is £10 – £2.75 = £7.25.

8.   £6.45
A screwdriver and a hammer together cost £2.50 + £4.50 = £7. 10% of this is 70p, so with the discount this comes to £7 – 70p = £6.30. The nails aren't discounted, so 30 nails cost $3 \times 5p = 15p$. So in total it costs June £6.30 + 15p = £6.45

9.   B
The scale starts at 15, not 0. So the difference between each day looks bigger than it actually is.

10.   63 cm²
You can split the whole logo up into smaller squares, as shown. There are 7 smaller squares, each of area 9 cm², so the total area of the logo is $7 \times 9 = 63$ cm².

11. 36 cm
Using the diagram from the previous answer, the perimeter of the whole logo is made up of 12 smaller side lengths. The overlapping area is 9 cm², so the side length of each smaller square is 3 cm (as 3 × 3 = 9). So the perimeter of the logo is 12 × 3 = 36 cm.

12. C
There are 3 × 5 = 15 hats to start with. After a blue hat and a green hat are given away, there are 15 − 2 = 13 hats. No red hats have been given out, so there are still 5. So the fraction of remaining hats that are red is ⁵/₁₃.

Test 5 — pages 14-16

1. B
Round each number to the nearest thousand — so the sum becomes 67 000 + 10 000 + 1000 = 78 000. The only number close to that value is 77 785.28.

2. 9
10% of 60 is 60 ÷ 10 = 6. 5% is half of 10%, so 5% of 60 is 6 ÷ 2 = 3. So 15% = 10% + 5% = 6 + 3 = 9.

3. B
Mel has stopped when the graph is flat. The first time is between hours 2 and 3, so she has stopped for 1 hour.

4. 3 hours, 0 minutes
You know her first stop lasts 1 hour. The second time she stops is between hours 5 and 6.5, so she stops for 1.5 hours. The third time is between hours 8 and 8.5, so she stops for 0.5 hours. Adding the three times together gives 1 + 1.5 + 0.5 = 3 hours.

5. 11
6 litres = 6000 ml. 1 pint is 568 ml, so 10 pints is 10 × 568 = 5680 ml. This isn't quite enough. Adding one more pint gives over 6000 ml, so the smallest number of 1 pint cartons that you need to buy is 11.

6. E
Mrs Rogers has 4 + 3 + 1 = 8 stickers in total. Four of them are square, so the fraction of stickers that are square is ⁴/₈, which is the same as ¹/₂.

7. 8.1 m
There are 100 cm in 1 metre, so 350 cm = 3.5 m. To find the distance, add the depth to the height — 3.5 + 4.6. 4.6 breaks down into 4 + 0.6. 3.5 + 4 = 7.5, and 7.5 + 0.6 = 8.1. So it's 8.1 m.

8. 48 cm²
The white space in the middle of Shape 2 is six times bigger than the space in the middle of Shape 1 (you can split it up into 6 triangles). So multiply 8 by 6: 8 × 6 = 48 cm².

9. 16
Add up all the test scores and divide by the number of scores. 8 + 21 + 22 + 13 = 64. 64 ÷ 4 = 16.

10. 28°
Angles on a straight line add up to 180°. 180° − 68° = 112°, so 3x + x = 112°, and so 4x = 112°. To find x, divide 112 by 4: 112 ÷ 4 = 28°.

---

11. 12
There are 360° round a point, so you need to find how many times 28 goes into 360. 28 × 10 = 280, so 10 angles can go round a point. Add on 1 angle at a time to see how many more angles can fit. 280 + 28 = 308, so 11 angles can go round a point, with room to spare. 308 + 28 = 336, so 12 angles can go round a point. 336 + 28 = 364, which is over 360. So 12 angles fit.

12. B
The angle for 4 is 180°, the angle for 2 is 90° and the angle for 6 is 30°. So the total angle for even numbers is 180 + 90 + 30 = 300°, and the total angle for odd numbers is 360 − 300 = 60°. The dice is rolled 36 times, so each roll is represented by 360 ÷ 36 = 10°. So 60° represents 60 ÷ 10 = 6 rolls.

Puzzles 1 — page 17

Moon, Star, Diamond, Circle
Larry's Test
If the difference between the highest and lowest mark is 70, then Larry's score must be either 28 + 70 = 98 or 93 − 70 = 23. If the most common score is 88, then Larry's score must be 88. If the mean is 55, then total for all six tests must be 55 × 6 = 330, then the scores add up to 329, so Larry's score must be 1.

Test 6 — pages 18-20

1. 1:1
There are 3 quadrilaterals (the squares), and 3 non-quadrilaterals, so the ratio is 3:3, which is 1:1.

2. B
There are 2 triangles out of a total of 6 shapes. As a fraction, this is ²/₆, which simplifies to ¹/₃.

3. £355
Subtracting £635 from £990 gives a profit of £355. You can use partitioning or the column method here.

4. 710
Divide £355 by £5. 355 breaks down into 350 + 5. 350 ÷ 5 = 70, 5 ÷ 5 = 1, so 355 ÷ 5 = 70 + 1 = 71. 71 boxes gives a total of 71 × 10 = 710 DVDs.

5. D
The three angles in a triangle add up to 180°. Add up the two angles you know, and subtract the total from 180°. 51° + 72° = 123°. 180° − 123° = 57°.

6. 800 m²
The platform is a 50 m × 20 m rectangle with a 20 m × 10 m rectangle removed. 50 × 20 = 1000 (it's just 5 × 2 with two zeros on the end.) 20 × 10 = 200, so the platform's area is: 1000 − 200 = 800 m².

---

7. 10
Add up the values you're given: 15 + 15 + 16 + 14 + 30 + 40. You can break this into chunks: 15 + 15 = 30, 16 + 14 = 30, 30 + 40 = 70. So the total is 30 + 30 + 70 = 130. 1 in 10 of all the newspapers were delivered on Thursday. So ¹/₁₀ of the total is 14, which means that the total is 14 × 10 = 140. So the missing value is 140 − 130 = 10.

8. 50%
He delivered 30 + 40 = 70 of the 140 newspapers at the weekend. ⁷⁰/₁₄₀ is equivalent to ¹/₂, which is 50%.

9. 20
The mean is the total number of newspapers delivered divided by the number of days: 140 ÷ 7 = 20.

10. D
The time that she was sitting on the bench is shown by the straight horizontal line. The time that she set off back home is the point that the horizontal line ends — this was 75 minutes after she initially set off. 75 = 60 + 15, so this is 1 hour and 15 minutes. She set off at 09:00, and 1 hour and 15 minutes after this is 10:15.

11. 53
The difference between the terms increases by 1 each time. So first you subtract 2, then you subtract 3, then you subtract 4 and so on. So the fifth term is 64 − 5 = 59, and the sixth term is 59 − 6 = 53.

12. B
He starts with a total of S + S = 2S sweets and gives away 30. So the number left is 2S − 30.

Test 7 — pages 21-23

1. 840 mm
A heptagon has 7 sides, so the perimeter is 120 × 7. 12 × 7 = 84, so 120 × 7 = 840 mm.

2. D
x is greater than a right angle (90°), but less than a straight line (180°), so it's either A or D. x looks like it's closer to 180° than 90°, so the best estimate is 150°.

3. C
1 km = 1000 m, so 740 m = 0.74 km and 120 m is 0.12 km. So the total distance he walks is 0.74 + 2.5 + 0.12 = 3.36 km (use the column method here).

4. 18
Reverse the operations. 96 ÷ 8 = 12. 12 + 6 = 18.

5. £10.50
10% of £70 = £70 ÷ 10 = £7. 5% is half of this, which is £3.50. So 15% is £7 + £3.50 = £10.50.

6. 300 m³
The container has total volume 10 × 15 × 6 = 10 × 90 = 900 m³ (use partitioning or write out the calculation if you need). ¹/₃ of this is 900 ÷ 3 = 300 m³.

7. 16
The 'Tuna' sector is 45°, which is half of 90°. The 'Trout' sector is half a circle, which is twice 90°. So the 'Trout' sector is four times as big as the 'Tuna' sector. Four people said that tuna was their favourite, so 4 × 4 = 16 people said that trout was their favourite.

---

8. 12
The 'Mackerel' and 'Haddock' sectors together are 3 times as big as the 'Tuna' sector. So 3 × 4 = 12 people said mackerel or haddock was their favourite.

9. 0
Put n = 5 into the formula: 20 − (4 × 5) = 20 − 20 = 0.

10. 6
The third highest line was for Jen, who won 6 games.

11. B
Tim and Sue each won 4 games and Kym won 2 games. Adding these together gives 4 + 4 + 2 = 10 games, which is the number of games that Ice won.

12. E
A is false because half of 29 is 14.5, which isn't a whole number. B is false because if Callum had collected half as many as Simone, then he would have 1 conker for every 2 of Simone's. So the total would be exactly divisible by 1 + 2 = 3, but it is not. C and D are false because an even number plus an even number and an odd number plus an odd number both give an even number, but 29 is odd. E could be true because Callum could have collected 15 and Simone could have collected 14, which would give a total of 29.

Test 8 — pages 24-26

1. C
Depth is a distance, so it can't be ml or m³ (which measure volume), or m² (which measures area). mm are too small to measure the depth of a well sensibly — you'd be more likely to use mm to measure the depth of a puddle. A well is usually several metres deep, so the most suitable unit is m.

2. 23
Divide 161 by 7. 161 breaks into 140 + 21. 140 ÷ 7 = 20 and 21 ÷ 7 = 3, so 161 ÷ 7 = 20 + 3 = 23.
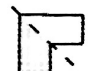

3. 33
The total number of cheese sandwiches sold was 80 − 35 = 45. 12 of these were on white bread, so the number of cheese on brown bread was 45 − 12 = 33.

4. C
16 out of 80 people chose turkey on brown bread. As a fraction, this is ¹⁶/₈₀. Dividing the numerator and denominator by 8 gives ²/₁₀, which is the same as ¹/₅.

5. B
After the reflection, the shape looks like this →
It has 6 sides, so it's a hexagon.

6. 30
¹/₄ of a circle represents 20 ÷ 4 = 5 albums, so Jeff has 20 ÷ 5 = 25 in total. ³/₄ of a circle represents 3 × 5 = 15 albums, so Noel has 20 + 20 + 15 = 55 in total. 55 − 25 = 30.

7. 30
Beth has 2¹/₂ circles, which is 20 + 20 + 10 = 50 albums. ¹/₅ of this is 50 ÷ 5 = 10, and ³/₅ is 3 × 10 = 30.

8. 50
Jeff and Beth own 25 + 50 = 75 albums between them. So Noel now also has 75, giving a grand total of 75 + 75 = 150. The mean is 150 ÷ 3 = 50.

9. C
All the points are inside the shape except for point C, shown on the right.
10. 129°
The angles in the triangle are 51°, 90° and 39°. So a is 90° + 39° = 129°.

11. E
There is a flat rate of £4, so the formula will be "4 + something". There is a charge of 80p per mile — in pounds, this is £0.80 or 0.8. For d miles, this will cost 0.8 × d, or 0.8d. So the total cost is $A = 4 + 0.8d$.

12. £16.00
Substitute $d = 15$ into the formula: $A = 4 + 0.8 \times 15$. $0.8 \times 10 = 8$ and $0.8 \times 5 = 4$, so $0.8 \times 15 = 8 + 4 = 12$. So $A = 4 + 12 = £16$.

Test 9 — pages 27-29

1. 106 minutes
The bus leaves Poolton at 09:46 and arrives in Vansdell at 11:32. 09:46 to 10:00 is 14 mins. 10:00 to 11:32 is 32 mins. 11:00 is 60 mins, and 11:00 to 11:32 is 32 minutes. So the total time is 14 + 60 + 32 = 106 minutes.

2. A
Find the time difference between different towns. Poolton to Leveleys is 09:46 to 10:21. 09:46 to 10:00 is 14 minutes and 10:00 to 10:21 is 21 minutes, so the total journey time is 14 + 21 = 35 minutes. So these are the towns you're looking for.

3. C
If you compare it to the other shapes, you can see that C has one block missing (from the 'base' of the shape).

4. C
An obtuse angle is between 90° and 180°. A, B, D and E are less than 90° (acute). C is the only obtuse angle.

5. B
1 cm = 10 mm, so 9 cm = 90 mm. An increase of 90 mm will take 90 ÷ 2 = 45 years.

6. 107°
The sum of the angles in the pie chart is 360°. The sum of the angles you're given is 78 + 77 + 48 + 50 = 253. So the missing angle is 360° − 253° = 107°.

7. 72 kg
45 ÷ 5 = 9, so 9 kg of hay feeds one horse for one day. 9 × 8 = 72, so 72 kg would feed 8 horses for one day.

8. 15
Work out 135 ÷ 9. 135 breaks down into 90 + 45. 90 ÷ 9 = 10 and 45 ÷ 9 = 5, so 135 ÷ 9 = 10 + 5 = 15. So 135 kg of hay will feed 15 horses.

9. B
The total number of people asked was 2 + 3 + 9 + 10 + 7 + 4 = 35. 10 people picked the ball marked 'D'. As a fraction, this is $^{10}/_{35}$. Dividing the numerator and denominator by 5 simplifies this to $^2/_7$.

---

10. 72°
7 out of 35 people picked 'E'. This is $^7/_{35}$. Dividing the numerator and denominator by 7 gives $^1/_5$. There are 360° in a pie chart, so $^1/_5$ of 360° will be for the 'E' sector. 360 breaks down into 350 + 10. 350 ÷ 5 = 70° and 10 ÷ 5 = 2, so 360° ÷ 5 = 70° + 2° = 72°.

11. 3.2 kg
The total height of the stack is 240 cm. The height of 2 boxes is 2 × 15 cm = 30 cm, and 240 ÷ 30 = 8, so there are 8 lots of 2 boxes = 16 boxes in total. Each box has a mass of 0.2 kg, so total mass of the stack is 16 × 0.2. 16 × 0.2 = 3.2. The total mass is 3.2 kg.

12. E
He starts with x, then divides by 2, giving $x \div 2$. Then he subtracts 15, giving $x \div 2 - 15$. Finally, he multiplies by 8, giving $8(x \div 2 - 15)$.

Test 10 — pages 30-32

1. 89p
37 breaks down into 30 + 7. 30 × 3 = 90 and 7 × 3 = 21, so 37p × 3 = 90p + 21p = 111p. So his change is 200p − 111p = 89p.

2. 106 cm
The perimeter is 2 × 23 + 2 × 30 = 46 + 60 = 106 cm.

3. 117°
Angles in a quadrilateral add up to 360°. 81 breaks down into 80 + 1. 3 × 80 = 240 and 3 × 1 = 3. So 3 × 81° = 240° + 3° = 243°. The remaining angle is 360° − 243° = 117°.

4. B
The most common response is the sector with the biggest angle. This is 80°, so the answer is 2.

5. 7
There are 360° in the pie chart and 36 people in the survey. 360 ÷ 36 = 10, so each person in the survey makes up 10° on the graph. The sector for 1 fizzy drink is 70°, so this is 70 ÷ 10 = 7 people.

6. 16
The number of dots in each term is 1, 4, 7, 10... So it increases by 3 each time. In the 5th term, there will be 10 + 3 = 13, and in the 6th there will be 13 + 3 = 16.

7. 50 s
The highest point on the graph is halfway between 40 s and 60 s on the time axis. This is 50 seconds.

8. 2 °C
From the graph, the temperature after 10 seconds was 4 °C, and the temperature after 20 seconds was 6 °C. So the difference is 6 °C − 4 °C = 2 °C.

9. E
All the times have 1 in the tens column, so compare the units. Tabby has the lowest units value (4), so she came first. Dinah, Pam, Debbie and Moirah all have 5 in the units column, so compare their tenths columns. Debbie has the lowest tenths value (1), so came second. Pam has the next lowest (2), so came third.

---

10. 1.16 s
Tabby's was the quickest time (14.97) and Summer's was the slowest (16.13). Going from 14.97 to 15 you add on 0.03, and going from 15 to 16.13 you add on 1.13. So the difference is 0.03 + 1.13 = 1.16 seconds.

11. D
There is a one-off cost of £150, so the expression will be "150 + something". Then there is a cost of £60 per day. For n days, this will cost 60 × n, or 60n. So the total cost is 150 + 60n.

12. £10
The cost with Sandra's Sanders is 150 + 60(4) = 150 + 240 = £390. The cost with Super Sanderz is 60 + 80(4) = 60 + 320 = £380. So it is £10 cheaper to use Super Sanderz.

Puzzles 2 — page 33

Blackboard Blues

Adding a vertical line to the minus sign will turn it into a plus sign: $10 + 5 = 15$
Adding a horizontal line to the second 1 in 111 will turn it into a plus sign: $1 + 1 + 1 = 3$
Adding a horizontal line before the 2 will turn it into a negative: $1 - 3 = -2$
Adding a horizontal line to the 1 will turn it into a 7: $7 + 7 = 14$
Adding a diagonal line to one of the + signs will turn it into a 4: $545 + 5 = 550$

Drawing Straws

It takes 2 moves to create 4 equilateral triangles:
It takes 2 moves to create 2 equilateral triangles:
It takes 6 moves to create 1 equilateral triangle:
Test 11 — pages 34-36

1. C
There are ten steps from 1.2 to 1.3. 1.3 − 1.2 = 0.1, so each step is worth 0.1 ÷ 10 = 0.01. To get to 1.24, count on 4 steps from 1.2. This brings you to C.

---

2. C
If Craig turns 90° anticlockwise, he will be facing west. He will see the Ferris wheel.
3. £5.20
4 bags cost 4 × £1.20 = £4.80 (use partitioning if you need). So her change is £10 − £4.80 = £5.20.

4. 68°
The angles at opposite corners of a parallelogram are equal, so angle P = 68°.

5. D
The 3D appearance of the pie chart means that the 'vanilla' section looks bigger than the others, because you can see more of the side of that section.

6. 6.3 litres
Becky buys 10 × 330 ml = 3300 ml of lemonade. 1 litre = 1000 ml, so 3300 ml = 3.3 litres. She also buys 2 × 1.5 = 3 litres of cola. In total, this is 3.3 + 3 = 6.3 litres.

7. 4350
The total number of tickets sold is 1289 + 1455 + 1606 = 4350 (use the column method here).

8. 1200 cm²
The net is for a cube with sides of length 10 cm, so each of the faces is a 10 cm × 10 cm square. The sheet of cardboard has a length equal to 4 squares and a width equal to 3. So the cardboard measures 40 cm by 30 cm — its area is 40 cm × 30 cm = 1200 cm².

9. C
Imagine the sheet split into squares with sides of length 10 cm. There will be 12 altogether, 6 of which are used for the net. This is $^6/_{12}$, which is equal to $^1/_2$.

10. 195
The mean of the 5 numbers is 180. So the sum of the 5 numbers is 5 × 180. 180 breaks into 100 + 80. 5 × 100 = 500 and 5 × 80 = 400, so 5 × 180 = 900. 155 + 162 + 190 + 198 = 705 (use the column method). The missing number is 900 − 705 = 195.

11. E
Alice's age is A. Barney's age is twice Alice's age, so Barney's age is 2 × A, or 2A. Charlene's age is 4 years less than Barney's age, so this is 2A − 4.

12. 30
Charlene's age is a third of 78, so find 78 ÷ 3. Break 78 into 60 + 18. 60 ÷ 3 = 20 and 18 ÷ 3 = 6, so Charlene is 20 + 6 = 26 years old. Charlene is 4 years younger than Barney, so Barney is 26 + 4 = 30.

Test 12 — pages 37-39

1. £734.14
15.62 is 100 times smaller than 1562, so the cost of making 15.62 litres will be £73 414 ÷ 100 = £734.14.

2. 42 cm
The perimeter of Shape 1 is 5 times the side length of each tile. So the side length of each tile is 30 cm ÷ 5 = 6 cm. The perimeter of Shape 2 is 7 times the side length of the triangular tiles. This is 7 × 6 cm = 42 cm.

3. 7:5
The perimeter of Shape 1 is 5 sides long, and the perimeter of Shape 2 is 7 sides long. So the ratio is 7:5 (remember it asks for Shape 2 : Shape 1, not the other way round).

4. C
Subtract 2.89 m from 5.76 m:
5.76
− 2.89
‾‾‾‾‾
2.87

5. 3.25 kg
1000 g = 1 kg, so 1550 g = 1.55 kg. 1.55 + 1.7 = 3.25 kg (use partitioning or the column method).

6. A
Cecilia ate $\frac{5}{12}$ of the sandwiches. There were 12 sandwiches, so $\frac{1}{12}$ is 1 sandwich. So Cecilia ate 5. Paul ate $\frac{1}{4}$ of the sandwiches. $\frac{1}{4}$ of 12 = 12 ÷ 4 = 3, so Paul ate 3. Art ate the rest, which is 12 − 5 − 3 = 4.

7. A
Cecilia drank 25% of the lemonade. 25% is the same as $\frac{1}{4}$, so she drank 4 litres ÷ 4 = 1 litre, leaving 3 litres for Art and Paul to share. If Paul drank twice as much as Art, then Paul must have drunk 2 litres, and Art must have drunk 1 litre.

8. 2
There are two lines of symmetry — 1 horizontal and 1 vertical.

9. D
The number of people is 6000 ÷ 750. You can simplify this division by cancelling down the two numbers, like simplifying a fraction. 6000 ÷ 750 = 600 ÷ 75 (divide by 10) = 200 ÷ 25 (divide by 3). 100 ÷ 25 = 4, so 200 ÷ 25 = 8.

10. C
The points on the graph for each week show the total raised by the end of that week. So the total raised during the fourth week is the difference between the total at the end of week 4 and the total at the end of week 3. The graph shows that the amount raised by the end of week 3 was £1200 and the amount raised by the end of week 4 was £2000. So the amount raised during week 4 was £2000 − £1200 = £800.

11. 7 weeks
They raised £600 in the first week. After 6 weeks of raising at this rate they would have raised 6 × £600 = £3600, which isn't quite enough. After 7 weeks they would have raised 7 × £600 = £4200, which is more than the target.

Test 13 — pages 40-42

12. 58
The differences between the first five numbers in the sequence are: 2, 4, 6, 8. The difference increases by 2 each time, so the sixth number will be 80 − 10 = 70 and the seventh number will be 70 − 12 = 58.

1. 7
From the chart, 13 people said 'Ape' and 6 people said 'Duck'. So the difference is 13 − 6 = 7.

2. C
You're looking for the next longest after 18.25 m. Abigail's and Zora's distances are both longer than this, so you want the longest distance out of Alexei, Li and Dina. This is Li's distance of 18.04 m.

3. £90
Abigail's distance was the longest, so she won. Rounding her distance to the nearest metre gives 18 m. So she won 18 × £5 = £90 (you can use partitioning).

4. 10
57 ÷ 6 = 9 remainder 3. So Bella will fill 9 egg boxes, and she'll need a tenth box for the three remaining eggs.

5. D
1 m = 100 cm, so 5.5 m = 550 cm. So the length left over will be 550 − 75 = 475 cm. This is 4.75 m.

6. £16.20
10% of £18 is £18 ÷ 10 = £1.80.
So the sale price is £18 − £1.80 = £16.20.

7. C
The difference between hottest and coldest was 27 °C − 14 °C = 13 °C, so A isn't true. The maximum was 27 °C and the minimum was 14 °C, so B and E aren't true. The most common value was 27 °C (it appears twice in the list), so D isn't true. In order, the temperatures are: 14 °C, 18 °C, 24 °C, 27 °C, 27 °C. So the third-coldest temperature was 24 °C, and so C is true.

8. 475 m
The perimeter is the total distance Jenny walked, 2650 m. Take away 2 × the length:
2650 m − 850 m − 850 m = 1800 m − 850 m = 950 m. So 950 m is 2 × the width, so the width of the field is 950 m ÷ 2 = 475 m.

9. B
Start by finding the other unknown angle in the triangle. Angles on a straight line add up to 180°, so this angle is 180° − 65° = 115°. Angles in a triangle add up to 180°, so 115° + 30° + x = 180°.
So 145° + x = 180°, and x = 180° − 145° = 35°.

10. m = 9
3m − 7 = 20 means that 20 is 7 less than 3m, so 3m = 27. The only number that multiplies by 3 to give 27 is 9, so m = 9.

11. (3, 8)
A rhombus always has lines of symmetry through opposite corners. So K must be the same horizontal distance from (8, 5) and (8, 11) as (13, 8). 13 − 8 = 5, so the x coordinate of K is 8 − 5 = 3. K must be the same vertical distance from (8, 5) and (8, 11) as (13, 8) is, so its y coordinate must also be 8.

Test 14 — pages 43-45

12. C
By drawing a line from K to (13, 8) you can see that the rhombus is two identical triangles joined together. So work out the area of one triangle and double it. The base is 10 and the height is 3. So the area of the rhombus is 2 × $\frac{1}{2}$ × 10 × 3 = 10 × 3 = 30.

1. 84
You're adding a number to 37 to make 121 here, and the opposite of addition is subtraction. So there are 121 − 37 = 84 stickers left for him to collect.

2. 0
Pentagons have 5 angles. The angles in a regular pentagon are all obtuse angles (between 90° and 180°) so a regular pentagon has no acute angles.

3. 31
The two smallest classes are Class 3 and Class 5. On the pictogram, Class 3 has 4 circles and Class 5 has 3$\frac{3}{4}$ circles. Each circle is worth 4 pupils. So Class 3 has 4 × 4 = 16 pupils. The three full circles for Class 5 represent 3 × 4 = 12 pupils, and the $\frac{3}{4}$ of a circle is another 3 pupils. So Class 5 has 12 + 3 = 15 pupils. So the combined group has 16 + 15 = 31 pupils.

4. 16
In the pictogram, 6 circles represent Class 4, so there are 4 × 6 = 24 pupils in Class 4. $\frac{1}{3}$ of 24 is 24 ÷ 3 = 8, so 24 − 8 = 16 pupils go on the school trip.

5. B
23 ÷ 5 = 4 remainder 3, so the decimal you're looking for must be '4.something'. The only option that begins with a 4 is B, so the answer is 4.6.

6. 17:07
Count on 142 minutes from 14:45 in steps. 14:45 is 15 mins before 15:00. 142 − 15 = 127, so the film ends 127 mins after 15:00. 1 hour = 60 mins, so 2 hours = 120 mins. So the film ends at: 15:00 + 2 hours + 7 minutes, which is 17:07.

7. A
1 litre = 1000 ml, so 1.75 litres = 1750 ml. So the total amount of paint is 1750 + 480 + 710 = 2940 ml (use the column method). This is 2.94 litres.

8. 60 cm³
The volume of the cuboid is 6 cm × 4 cm × 2.5 cm. 4 × 2.5 = 10, so the volume is 6 × 10 = 60 cm³.

9. A
Imagine the two larger sections each split in half. This would give 8 sections in total. 3 of these sections would have a star (the large star section would create two smaller star sections). So the fraction is $\frac{3}{8}$.

10. 100
She took 400 photos over a period of 4 days. So the mean number of photos she took was 400 ÷ 4 = 100.

11. 14
Joan took as many photos on day 4 as on days 1-3 put together. So she took half of all her photos on day 4. Half of 400 is 200, so she took 200 photos on days 1-3. On days 2 and 3 she took 133 + 53 = 186 photos. So on day 1 she took 200 − 186 = 14.

Test 15 — pages 46-48

12. 71
The number of squares in each pattern is 1, 5, 11, 19 . So first you add 4, then 6, then 8, and so on. So the number of squares added increases by 2 each time. So the next terms are 19 + 10 = 29, 29 + 12 = 41, 41 + 14 = 55 and 55 + 16 = 71.

1. C
Point F is 3 squares away from the mirror line, so its reflection will also be three squares away from it, but on the other side of the line. This is (−2, 4).

2. A
If you subtract from a negative number, it gets further away from zero on the number line, so counting down 9 from −13 gives −22.

3. 210
The total number of seats is
9 × 10 + 8 × 15 = 90 + 120 = 210.

4. 70%
$\frac{210}{300}$ simplifies down to $\frac{70}{100}$ (divide both numbers by 3), which is the same as 70%.

5. 17
There were 60 people in total, and 28 had a ham sandwich, so 60 − 28 = 32 people had a cheese sandwich. 15 of those had a banana, so 32 − 15 = 17 people had a cheese sandwich and an apple.

6. B
28 − 8 = 20 people chose a ham sandwich and a banana, so 15 + 20 = 35 people had a banana. $\frac{35}{60}$ simplifies down to $\frac{7}{12}$ (by dividing the top and bottom of the fraction by 5).

7. D
The first three options are too small — 500 ml is only about the size of a small bottle of water. 150 000 000 ml is 150 000 litres, which would be an enormous amount for just 4 fish. So the sensible answer is 150 000 ml, or 150 litres.

8. 4 hours
The sport section of the chart is 60°. The full circle is 360°, so as a fraction, the sport section is $\frac{60}{360} = \frac{6}{36} = \frac{1}{6}$ of the pie chart. There are 24 hours in a day, so the number of hours of sport is 24 ÷ 6 = 4 hours.

9. D
The faces all have either two or four lines of symmetry. 1, 4 and 5 have four lines:
2, 3 and 6 have two lines:

So the only pair where both have the same number of lines of symmetry is D.

10. 11
Check the factors of 66 that are greater than 5 and see if they're prime. The first one is 6, but this isn't prime. The next one is 11, which is prime. So 11 must be the number he's thinking of.

11. 92 m²
Divide the shape up into two rectangles — a 9 m × 8 m one and a 9 m × (13 – 9 = 4 m) one. The total area is the sum of the two: 4 × 9 + 9 × 8 = 20 + 72 = 92 m².

12. £6.60
t is the number of toppings, so here $t = 4$. So the price will be $P = 5 + (0.4 × 4) = 5 + 1.6 = 6.6$. This is £6.60.

Puzzles 3 — page 49

Whose House?
19: Edgar, 21: Bex, 23: Carrie, 25: Don, 27: Anna.

Crazy Computer
♥ = 5, ▽ = 8, ● = 1, ▲ = 3, Y = 0, ✱ = 2, ❀ = 4, ☷ = 7, ▮ = 6, ▨ = 9
The code Captain Calculator needs to enter is 9402.

Test 16 — pages 50-52

1. C
The part of the pie chart with the biggest angle is the most common colour — this is silver.

2. 20
There are 1000 g in 1 kg, so 1.5 kg = 1.5 × 1000 = 1500 g. 75 g × 2 = 150 g, and 150 g × 10 = 1500 g, so Chelsea can make 2 × 10 = 20 piles of sugar.

3. C
Add up all the ages and divide by the number of children: 13 + 10 + 6 + 3 + 3 + 1 = 36. 36 ÷ 6 = 6.

4. 5
Subtracting two from each of the grandchildren's ages gives 11, 8, 4, 1, 1. The youngest would not have been born. Adding these together gives 11 + 8 + 4 + 1 + 1 = 25. So their mean age was 25 ÷ 5 = 5 years old.

5. 47°
Angles in a straight line add up to 180°. So $x = 180° – 133° = 47°$. (Do this using partitioning.)

6. B
Use estimating here — round 807 down to 800 and 4096 down to 4000. Then 800 × 4000 = 3 200 000. The only possible option is B, so 807 × 4096 = 3 305 472.

7. (0, 7)
T is 5 units directly above line S. So line L will be 5 units above line S at all times, because they are parallel. So at the y-axis, S is at (0, 2). 5 units above this is (0, 7).

8. 25 cm²
The horizontal distance from T to line S is 10 cm. The vertical distance is 5. So the area of the triangle is ½ × 10 × 5 = 5 × 5 = 25 cm².

9. 9
Work backwards here. 44 ÷ 2 = 22. 22 – 4 = 18. 18 ÷ 2 = 9. So Caity started with the number 9.

10. A
The area of a rectangle is the width multiplied by the length — so the garden's area is $x(x + 5)$. You're told that this is 126 m², so the equation is $x(x + 5) = 126$.

11. 12
⅓ of 240 is 240 ÷ 3 = 80. So 80 squirrels aren't grey. Now work out 15% of 80: 15% = 10% + 5%. 10% of 80 is 80 ÷ 10 = 8. 5% is half of 10%, so 5% of 80 is 8 ÷ 2 = 4. So 15% of 80 is 8 + 4 = 12.

12. C
⅕ of the sweets are cherry, which is 5 out of 25. After John has picked and eaten one cherry sweet, 4 out of 24 of the sweets are cherry. Writing this as a fraction, $\frac{4}{24}$ is the same as $\frac{1}{6}$.

Test 17 — pages 53-55

1. C
Hexagons are shapes with six straight sides. C is the only option that has six sides.

2. 3 minutes, 20 seconds
There are 100 cm in 1 m, so there are 200 lots of 0.5 cm in 1 m. So it takes the snail 200 seconds to travel 1 m. 1 minute = 60 seconds, so 3 minutes is 180 seconds, and so 200 seconds is 3 minutes and 20 seconds.

3. D
The area of a triangle is ½ × base × height. So the area of this triangle is ½ × 9 × 6. ½ × 6 = 3, so ½ × 9 × 6 = 3 × 9 = 27 cm².

4. 3
Reading off the graph, you can see that on Friday, Linda sold 11 guitars and Wayne sold 8 guitars. So the difference is 11 – 8 = 3.

5. £1854.50
Wayne sold 2 guitars on Monday, and Linda sold 8. So they sold 2 + 8 = 10 guitars, each for £185.45. So in total they took 10 × £185.45 = £1854.50.

6. D
45.9 × 66.26 is the same as 459 × 6626 except there are three digits after the decimal points. Taking 3 041 334 and moving the decimal point three places to the left gives 3041.334.

7. £2.40
If Louise bought 3 kg made up of 500 g bags, then she would need 6 bags. This would cost £1.60 × 6 = £9.60 (use the partitioning method). If she bought 3 kg made up of 1.5 kg bags, then she would need 2 bags. This would cost £3.60 × 2 = £7.20. The difference is £9.60 – £7.20 = £2.40.

8. C
The perimeter is $3 + 2x – 8 + 6x$. Combining the x terms gives $2x + 6x = 8x$. Combining the number terms gives $3 – 8 = –5$. So it simplifies to $8x – 5$.

9. 16 and 22
To get from one term to the next you add on 1, then 2, then 3, and so on. So the next term after 11 is 11 + 5 = 16, and the term after this is 16 + 6 = 22.

10. C
Go through each option in turn.
10% of 158 is 158 ÷ 10 = 15.8, so you can rule out option A.
½ of 30 is 30 ÷ 2 = 15, so you can rule out option B.
0.1 × 100 = 10, so you can rule out option C.
⅓ of 24 is 24 ÷ 3 = 8, so ⅔ is 8 × 2 = 16, so you can rule out option D.
10% of 90 is 90 ÷ 10 = 9, so 20% is 9 × 2 = 18, so you can rule out option E.
So option C gives the smallest answer.

11. 1080°
An octagon has 8 sides, so put 8 into the expression — 180(8 – 2) = 180 × 6 = 1080° (use partitioning).

12. 12
If you subtract 2 from the number of sides of the shape and multiply it by 180, you get 1800. So work backwards: 1800 ÷ 180 = 10. Adding 2 to 10 gives 12 sides.

Test 18 — pages 56-58

1. 23.3 kg
Sarah's heaviest pet is 23.5 kg. Her lightest pet is 200 g which is equal to 0.2 kg (because 1000 g = 1 kg). So the difference is 23.5 – 0.2 = 23.3 kg.

2. 12 cm
The shorter side + the longer side make up half the perimeter of a parallelogram, which is 62 ÷ 2 = 31. So the length of the shorter side is 31 – 19 = 12 cm.

3. A
Use estimating here — a cup holds 256 ml, so there are about 4 cups in 1 litre (1000 ml). A bathtub holds 189.4 litres of water, which is approximately 200 litres. So you can fill about 4 × 200 = 800 cups from a full bathtub. The only possible answer is option A — 739.

4. 38 minutes
Break 189.4 into 100 + 80 + 9.4. 100 = 5 × 20, so it takes 20 minutes to drain 100 litres. 80 = 5 × 16, so it takes 16 minutes to drain 80 litres. 9.4 is more than 1 × 5 but less than 2 × 5, so rounding up it takes 2 minutes to drain 9.4 litres. Adding these together gives 20 + 16 + 2 = 38 minutes.

5. D
60 cm is 75% of the original size. You need to find 100%, so first find 25% and then multiply by 4. 75 ÷ 3 = 25, so 25% is 60 ÷ 3 = 20 cm. So the original painting size (100%) is 20 × 4 = 80 cm.

6. £0.90
$\frac{1}{10}$ of £18 is £1.80. $\frac{1}{20}$ is half of this, which is £1.80 ÷ 2 = £0.90 (you can use partitioning here).

7. 4
In the rows for Mrs Robinson and Miss McKenzie, there are a total of 8½ pictures of CDs, representing 34 CDs. There is a quarter of a picture of a CD in the row for Miss Elliot, so the number in the key must divide exactly by 4. 8½ × 4 = 34, so the answer is 4.

8. 6:20 am
There are 200 houses and the postman delivers to 2 houses per minute, so it takes him 200 ÷ 2 = 100 mins. Including the break, this gives 100 + 20 = 120 mins, which is equal to 2 hours. Two hours after 4:20 am is 6:20 am.

9. C
You're rounding to the nearest thousandth (the third column after the decimal point) so you have to look at the last digit in this number. It's 6, so you round the thousandths digit up to give 7 892.322.

10. C
Monday to Friday is 5 days, so Miss Leigh marks 50 + 45 + 40 + 35 + 30 = 200 papers (you can use the column method here).

11. 3
Joining the first cross will make a triangle. Joining the second cross will make a square (a regular quadrilateral). The other three crosses make kites, which are irregular quadrilaterals.

12. 12
The width is $2x$, and the length is twice the width, i.e. $2x × 2 = 4x$. So the perimeter is $2x + 4x + 2x + 4x = 12x$. If Joanna paints x m per minute then it will take 12 minutes.

Test 19 — pages 59-61

1. E
The factors of 30 are 1, 2, 3, 5, 6, 10, 15, 30. The factors of 15 are 1, 3, 5, 15. So there are four factors the same — all of the factors of 15.

2. 27 °C
The warmest temperature is 11 °C, and the coldest is –16 °C. The difference between –16 and 0 is 16, and the difference between 0 and 11 is 11. So the difference between –16 and 11 is 16 + 11 = 27 °C.

3. –34.3 °C
You want to find 18.3 less than –16. Do this using partitioning: 18.3 breaks into 10 + 8 + 0.3. –16 – 10 = –26, –26 – 8 = –34, –34 – 0.3 = –34.3

4. 100 seconds
Amy takes 25% longer than 80 seconds. 25% of 80 is 80 ÷ 4 = 20. So Amy takes 80 + 20 = 100 seconds.

5. 10 m²
250 cm = 2.5 m. The area is width × length, which is 2.5 × 4 = 10 m².

6. C
Round 35.274 to 40, and round 6.35 to 6. So there are about 40 × 6 = 240 ounces in a stone. The only answer close to this is 224.

7. 10
The 'men' bar for skiing is 7.5 units tall. Each vertical unit represents 2 people, so this is 7.5 × 2 = 15 men. The 'women' bar for skiing is 2.5 units tall. This is 2.5 × 2 = 5 women. So 15 – 5 = 10 more men than women chose skiing.

8. E
A scalene triangle has no lines of symmetry. An isosceles triangle and kite each have 1 line of symmetry. A rectangle has 2 lines of symmetry, and an equilateral triangle has 3. So the answer is option E.

9. 56 cm
There are six sides of length 1 cm and ten sides of length 5 cm. So the perimeter is 6 × 1 + 10 × 5 = 6 + 50 = 56 cm.

10.   E
Making a triangle from A or D gives a right-angled triangle. Making a triangle from B or C gives an isosceles triangle. So the answer is E.

11.   2
The area of any triangle is $\frac{1}{2} \times$ base $\times$ height. The two triangles have exactly the same base, so the only thing that changes their area is their heights. The second triangle is twice as tall as the first triangle, so it's two times as big.

12.   B
The best way to do this question is to just try the options — for option A you get $\frac{1}{2} \times 5 \times 6 = 15$. For option B you get $\frac{1}{2} \times 7 \times 8 = 28$. So the answer is 7.

Test 20 — pages 62-64

1.   B
There are 100 cm in 1 m, so the road is $236\,515 \div 100 = 2365.15$ m long. There are 1000 m in 1 km, so the road is $2365.15 \div 1000 = 2.36515$ km long.

2.   C
A, B, D and E each have 1 line of symmetry. C has 4 lines of symmetry.

3.   90 cm³
The area of the triangular face is $\frac{1}{2} \times 9 \times 5$, so the volume of the prism is $\frac{1}{2} \times 9 \times 5 \times 4 = 9 \times 5 \times 2 = 9 \times 10 = 90$ cm³.

4.   4280
You're adding two values which are both the result of multiplying something by 2140. So it's '1.1 lots of 2140' plus '0.9 lots of 2140', which gives $1.1 + 0.9 = 2$ lots of 2140. $2 \times 2140 = 4280$.

5.   18.88 s
The slowest time was Andrew's at 47.82 s. The quickest time was Thomas's at 28.94 s. Subtract to find the difference:

$$\begin{array}{r} 4\,{}^{3}7.\,{}^{1}8\,{}^{7}2 \\ -\,2\,8.\,9\,4 \\ \hline 1\,8.\,8\,8 \end{array}$$

So the difference is 18.88 seconds.

6.   1
Multiples of 5 between 80 and 100 are: 80, 85, 90, 95, 100. Try dividing each of these by 6. The only one which divides exactly is 90 ($90 \div 6 = 15$). So the answer is 1.

7.   10
The sector for 'Comedy' is 60°, and $\frac{60}{360} = \frac{1}{6}$. So $\frac{1}{6}$ of the people asked said 'Comedy'. 60 people were asked, and $\frac{1}{6}$ of 60 is $60 \div 6 = 10$ people.

8.   D
30° of the pie chart represents 'Thriller'. As a fraction, this is $\frac{30}{360}$, which is the same as $\frac{1}{12}$.

9.   C
You're looking for the formula that The Number Cruncher uses. Try out each expression and see which one works. The numbers that go into the Number Cruncher are the different values of x and the numbers that come out are the results of the expression. $2x + 7$ is the only one which works for all the numbers, so C is correct.

10.   7:00 pm
The field Gregory is ploughing has an area of $300 \times 400 = 120\,000$ m². If he ploughs 200 m² per minute, then it'll take him $120\,000 \div 200 = 600$ mins to plough the field (use cancelling down here). There are 60 mins in an hour, so 600 mins is $600 \div 60 = 10$ hours. Gregory starts at 9:00 am. Ten hours after this is 7:00 pm.

11.   7:28 pm
The perimeter is $300 + 400 + 300 + 400 = 1400$ m. There are 2 lots of 50 m in 100 m, and 14 lots of 100 m in 1400 m, so there are $2 \times 14 = 28$ lots of 50 m in 1400 m. So there are $2 \times 14 = 28$ lots of 50 m in 1400 m. So Gregory finishes 28 minutes after 7:00 pm, which is 7:28 pm.

12.   E
Try each option as the starting number for Keith's sequence. For option A, the sequence is $-1, 1, 1, 1, \ldots$
For option B, the sequence is $0, 0, 0, 0, \ldots$
For option C, the sequence is $0.5, 0.25, \ldots$
For option D, the sequence is $1, 1, 1, 1, \ldots$
For option E, the sequence is $2, 4, 16, \ldots$
Option E is the only sequence where each term is greater than the previous term, so 2 could have been Keith's starting number.
Puzzles 4 — page 65

The Chess Tournament
The only possible option for the next game is Andrew against Mohammed.

Pete's Pieces of Pizza
E.g. for Pizza 3:

Pizza 4 can be cut into 11 pieces:

Make a table showing the Pizza number and the maximum number of pieces that can be cut from it:

| Pizza	1	2	3	4
Number of pieces	2	4	7	11

$+2 \quad +3 \quad +4$

To find the next number of pieces, you add on one more than last time. So for Pizza 5 there will be $11 + 5 = 16$ pieces, and for Pizza 6 there will be $16 + 6 = 22$ pieces.

Test 21 — pages 66-68

1.   13.5 mm
An equilateral triangle has 3 equal sides. So the perimeter is 3×4.5. 4.5 breaks down into $4 + 0.5$. $3 \times 4 = 12$, and $3 \times 0.5 = 1.5$. So $3 \times 4.5 = 12 + 1.5 = 13.5$ mm.

2.   D
Add up the prices of all items on the table. $4.00 + 3.20 + 6.00 + 2.00 + 0.80 = 16.00$. She spends £14, so the one item she doesn't buy has price $£16 - £14 = £2$. This is the glove.

3.   B
You can make a triangle, parallelogram, hexagon and trapezium, as shown. So the answer is B — rectangle.
4.   870 g
24 bags of crisps weigh $24 \times 30 = 720$ g (use partitioning here by breaking 24 into $20 + 4$). Adding on the weight of the box gives $720 + 150 = 870$ g.

5.   D
You're looking for the month with the biggest difference between the heights of the two bars. This is April.

6.   A
16:30 is $4\frac{1}{2}$ hours after noon (12:00). The temperature drops 1 °C every half an hour, so it drops temperature 2 °C every hour. Over $4\frac{1}{2}$ hours, the temperature will drop by $(4 \times 2) + 1 = 9$ °C. 9 °C less than 8 °C is -1 °C.

7.   A
Siobhan's sequence is $50, 38, 26, 14, 2 \ldots$ So she will count the number 2.

8.   125 cm²
The width of the whole shape is 25 cm. It is 5 squares wide, so the side length of each square is $25 \text{ cm} \div 5 = 5$ cm. So the area of one square is $5 \times 5 = 25$ cm². There are 3 whole squares and 4 half-squares. The 4 half-squares make 2 full squares. This gives a total of 5 whole squares. So the total area is 5×25 cm². $4 \times 25 = 100$, so 5×25 is $100 + 25 = 125$. So the area is 125 cm².

9.   6
The total number of fish for the first 4 days is $4 \times 7 = 28$. So the total over the 5 days is $28 + 2 = 30$. The mean for this period is $30 \div 5 = 6$.

10.   C
She caught 30 fish in the first five days. So the fraction that were salmon is $\frac{5}{30}$, which is the same as $\frac{1}{6}$.

11.   165 m³
Work out the area of the base — think of it as a 10 m $\times$ 7 m rectangle with a 5 m $\times$ 3 m rectangle removed. $10 \times 7 = 70$ and $5 \times 3 = 15$, so the area of the base is $70 - 15 = 55$ m². Find the volume by multiplying this by the height. 55 breaks down into $50 + 5$. $50 \times 3 = 150$, $5 \times 3 = 15$, so $55 \times 3 = 150 + 15 = 165$ m³.

12.   2750 kg
The lid has the same area as the base, which is 55 m². Each square metre weighs 50 kg, so the total mass of the lid is 55×50. $50 \times 50 = 2500$, $5 \times 50 = 250$, so $55 \times 50 = 2500 + 250 = 2750$ kg.

Test 22 — pages 69-71

1.   12:00
Sally will make a cup of tea at: 09:00, 10:30, 12:00... Jordi makes a cup of tea every hour, so he will also make one at 12:00.

2.   15
If Jordi makes one cup of tea per hour then he makes 9 cups between 09:00 and 17:00 (at 09:00, 10:00, ..., 17:00). Sally makes 6 cups of tea (at 09:00, 10:30, 12:00, 13:30, 15:00, 16:30). So in total they make $9 + 6 = 15$ cups of tea.

3.   B
The strip of cloth measures 8.4 cm. 10p per cm would cost 84p, so 5p per cm is half of this. $84p \div 2 = 42p$. This is £0.42.

4.   19
The calculation on the left is the same as 4×38. 8 is double 4, so the number you're looking for must be half of 38. $38 \div 2 = 19$.

5.   £11.88
500 g is half a kilogram, so there are 12 lots of 500 g in 6 kg. $12 \times 99p = 12 \times £1 - 12 \times 1p = £12 - 12p = £11.88$.

6.   D
10% of 50 is $50 \div 10 = 5$, so there are 5 ready salted. $\frac{1}{5}$ of 50 is $50 \div 5 = 10$, so there are 10 cheese and pickle. There are also 10 prawn cocktail. Adding these up gives $5 + 10 + 10 = 25$. So there are $50 - 25 = 25$ roast chicken. So the flavour with the most bags is roast chicken.

7.   B
Find the point halfway between 4 and 5 on the horizontal axis. Read up to the line, then across to the vertical axis. You end up halfway between 3 and 4, which is 3.50 Westmorland Dollars.

8.   40
First take off the extra 13 that Harriet has: $67 - 13 = 54$. This number of pigeons is split equally between them, so they each have $54 \div 2 = 27$. Adding the extra 13 back on gives $27 + 13 = 40$.

9.   C
AB is vertical, so PQ must be horizontal. So P and Q must have the same y coordinate. The only option where P and Q have the same y coordinate is C.

10.   D
The 3 angles add up to make a right angle (90°). So $a + 2a + b = 90°$. The a and $2a$ add together to give the expression $3a + b = 90°$.

11.   36°
$a = 18°$, so $3a = 3 \times 18° = 54°$. So $b + 54 = 90$. So $b = 90 - 54 = 36°$.

12.   144°
The whole pie chart is 360°. 10% of this is 36°, so 40% is $4 \times 36°$. 36 breaks into $30° + 6°$. $4 \times 30° = 120°$ and $4 \times 6° = 24°$, so $4 \times 36° = 120° + 24° = 144°$.

Test 23 — pages 72-74

1.   200 503
Two hundred thousand is 200 000. Five hundred and three is 503. Adding these together gives 200 503.

2.   C
Use the horizontal lines on the chart to help you compare the heights. Adding the 'Bus' bar to the 'Car' bar will give a total height the same as the 'Bike' bar.

3.   11
10 bananas cost $£0.18 \times 10 = £1.80$. 11 bananas cost $£1.80 + £0.18 = £1.98$. Another banana would take the cost over £2, so he buys 11 bananas.

4.   1320 g
If the mean mass is 120 g, then the total mass is 11×120 g. 10×120 g $= 1200$ g, 1×120 g $= 120$ g. So in total the bananas have a mass of $1200 + 120 = 1320$ g.

5.   A
The amount of water in the beaker is about $^1/_5$ of the total volume of the beaker. So 100 ml is the best estimate for the amount of water.

6.   260 mm²
The area of the rectangle is $10 \times 22 = 220$ mm². The area of each triangle is $^1/_2 \times$ base $\times$ height = $^1/_2 \times 10 \times 4 = 5 \times 4 = 20$ mm². So the total area of the whole shape is $220 + 20 + 20 = 260$ mm².

7.   23 miles
His mean daily distance was 70 miles, so his total distance travelled over the seven days was 7×70. 7×49, so $7 \times 70 = 490$. So on the seventh day, he drove $490 - 467 = 23$ miles.

8.   Week 12
The sequence of her distances is 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26... 26 is the 12th term, so she runs 26 miles in week 12.

9.   E
The factors of 10 between 1 and 6 are 1, 2 and 5. There are three of these, so the fraction of faces showing one of them is $^3/_6$, which is the same as $^1/_2$.

10.   46 cm
The hole has two sides of length 8 cm, two sides of length 3 cm, and four sides of length 6 cm. So the perimeter is $2 \times 8 + 2 \times 3 + 4 \times 6 = 16 + 6 + 24 = 16 + 30 = 46$ cm.

11.   A
There are 4 rectangles of area $8 \times 3 = 24$ cm², and 4 squares of area $6 \times 6 = 36$ cm². So the total area of all the tiles is $4 \times 24 + 4 \times 36$. In both parts of the addition, you're multiplying by 4, so in total you've got $24 + 36 = 60$ lots of 4. So it's $60 \times 4 = 240$ cm². The cost of this will be 240×10p, which is 2400p, or £24.

12.   3.0 litres
0.75 litres of red paint + 2.25 litres of yellow paint gives a total of 3 litres of tangerine paint. Four lots of this will give the total of 12 litres that she needs. So the amount of red paint she needs is 4×0.75 litres. 0.75 breaks into $0.7 + 0.05$. $4 \times 0.7 = 2.8$ and $4 \times 0.05 = 0.2$, so $4 \times 0.75 = 2.8 + 0.2 = 3$ litres.

Test 24 — pages 75-77

1.   B
270° is $^3/_4$ of a turn. $^3/_4$ of a turn clockwise will land the pointer on the section labelled with the letter B.

2.   5
5×50p = £2.50. 10×20p = £2. This gives a total of £4.50, so the rest is 50p, which is 5 lots of 10p.

3.   £2.00
$^4/_5$ of 5 is 4, so Jimi has spent four 50p pieces. 4×50p = 200p, which is equal to £2.

4.   C
2 hours after 10:53 is 12:53. Another 7 minutes takes you to 13:00. There are $42 - 7 = 35$ minutes of journey time still remaining. So he arrives at 13:35.

---

5.   C
£38 is higher than £32.75, so you can rule out B. A and D give the same value — 50% is the same as $^1/_2$, and $^1/_2$ of £80 is £40. This is also higher than E, so you can rule out both A and D.
$^1/_{10}$ of £80 is $80 \div 10 = £8$, so $^4/_{10}$ is $4 \times 8 = £32$. This is less than £32.75, so C is the lowest sales price.

6.   C
mm, cm and m are all too small to measure this distance. m² measures area, not distance. So km is the most suitable out of the options given.

7.   £18
The total number of cars he washed was: $5 + 4 + 6 + 7 + 8 = 30$. So the mean number of cars washed per day was $30 \div 5 = 6$, and the mean amount he earned was $6 \times £3 = £18$.

8.   1
The width of the box is 3 cm, so it's wide enough to hold exactly 1 cube. This leaves 1 cm in its height, which isn't big enough to fit another cube, and 2 cm in its length, which also isn't big enough for another cube. So just 1 cube will fit inside the box.

9.   12 cm³
To fit another cube in the width it'd have to be an extra 3 cm wide. To fit one in the length it'd have to be an extra 1 cm long, and to fit one in the height it'd have to be an extra 2 cm high. So if you want the minimum extra volume, extend along the length. So that's an extra $1 \times 3 \times 4 = 12$ cm³ volume needed.

10.   37%
The 'Brown' section starts at 22% and ends at 59%. The percentage for this section is $59\% - 22\% = 37\%$.

11.   C
All of the points on this line will have x and y coordinates which are negatives of each other. The only one that doesn't match this is (2, 2), where the x and y coordinates are the same.

12.   2
There are 2 sides of length $4x$ and 2 sides of length 2. So the perimeter is $4x + 4x + 2 + 2 = 8x + 4$.

Test 25 — pages 78-80

1.   A
90° is $^1/_4$ of a turn. Turning the shape $^1/_4$ of a turn anticlockwise gives shape A.

2.   B
B is the only one which follows the rule:
$(2 \times 3) - 2 = 6 - 2 = 4$, and $(4 \times 3) - 2 = 12 - 2 = 10$.

3.   £11.00
10 buzz cuts gives $10 \times £5.50 = £55$. 5 flat tops gives $5 \times £9 = £45$. Adding these together gives $£55 + £45 = £100$. So £44 came from 4 mohawks. $£44 \div 4 = £11$.

4.   60 cm
Each triangle has perimeter 45 cm, so has side length $45 \div 3 = 15$ cm. The new shape has 4 sides of length 15 cm, so has perimeter $4 \times 15 = 60$ cm.

---

5.   2
Toby can make a regular hexagon with three rhombuses, as shown. He already has one, so he needs another 2.
6.   C
The lengths of the fish pictures show the number of fish caught with each rod — so the Angler's Dream caught 4 fish, and the Fish-o-matic caught 12 fish. But the Fish-o-matic picture looks a lot more than 3 times as big as the Angler's Dream picture, which makes it seem like it caught even more fish than it actually did.

7.   C
Of the options, 1110 and 1105 will round to 1110 to the nearest 10. 1105 is the smallest of these.

8.   E
1 picture represents 4 eggs, so 8 pictures represents $8 \times 4 = 32$ eggs. $^1/_4$ of a picture represents 1 egg, so $^3/_4$ of a picture will represent the 3 remaining eggs. So in total, Rhoda needs $8^3/_4$ egg pictures.

9.   70°
Angles around a point add up to 360°. The 20°, 40° and 90° angles add up to 150°, and the $2x$ and x angles add up to $3x$. So $3x + 150° = 360°$.
$360° - 150° = 210°$ (use partitioning or the column method), so $3x = 210°$. $210 \div 3 = 70$, so $x = 70°$.

10.   720 g
450 g of mince for 5 people means that she uses 450 g for 5 people. So for 8 people, she'll need $450 \div 5 = 90$ g per person. So for 8 people, she'll need $8 \times 90 = 720$ g.

11.   D
$^1/_5$ are from Britain, so the total number of stamps can be divided exactly by 5. $^1/_3$ are from France, so the total number can be divided by 3, and $^1/_4$ are from Sweden, so the total number can be divided by 4.
The only option which divides exactly by 5, 3 and 4 is 60 ($60 \div 5 = 12$, $60 \div 3 = 20$, and $60 \div 4 = 15$).

12.   £12.50
You want to divide £31.25 by 2.5. £31.25 breaks down into £30 + £1.25. $10 \div 2.5 = 4$, so $30 \div 2.5$ will be 3 times this, which is $4 \times 3 = 12$.
1.25 is half of 2.50, so $1.25 \div 2.50 = 0.5$.
So $£31.25 \div 2.5 = £12 + £0.50 = £12.50$.
Puzzles 5 — page 81

Maths Crossword

Test 26 — pages 82-84

1.   15
You find each term by subtracting 10 from the previous term. So the next terms will be 25, 15, ... The fifth term is 15.

2.   C
Out of the numbers 1-6, five of them are factors of 12 — 1, 2, 3, 4 and 6. So the fraction of the spinner showing a factor of 12 is $^5/_6$.

3.   D
Read off the graph at 1910:

It is approximately 180 000 people.

4.   4%
Mrs Biggs has $5 + 7 + 7 + 4 + 1 + 1 = 25$ pupils in her class. 1 pupil has 5 or more siblings. As a fraction, this is $^1/_{25}$, which is the same as $^4/_{100}$, or 4%.

5.   B
Adding up the total for each bar gives 25, so A is true. Adding up the totals for 3, 4 and 5 siblings gives 6, so C is true. 5 out of 25 pupils have no siblings, which is the same as 1 in 5, so D is true. $5 + 7 = 12$ pupils have 0 or 1 siblings, so E is true. One pupil has 5 or more siblings, but you don't know if they have exactly 5 or more than 5. So B could be false.

6.   B
1.1 kg = 1100 g, so there are $1100 \div 100 = 11$ lots of 100 g. So Audrey needs to cook the chicken for $11 \times 5 + 25 = 55 + 25 = 80$ minutes. This is equal to 1 hour 20 minutes.

7.   2000 g
2 hours and 5 minutes is $120 + 5 = 125$ minutes. Take off the initial 25 minutes to give 100 minutes. This is 20 lots of 5 minutes, so the chicken weighs $20 \times 100 = 2000$ g.

8.   3600 cm³
Each leg has volume $4 \times 4 \times 50 = 4 \times 200 = 800$ cm³. Four legs have a volume of $4 \times 800 = 3200$ cm³. The top is $20 \times 20 \times 1 = 20 \times 20 = 400$ cm³. So the total volume is $3200 + 400 = 3600$ cm³.

9.   £180.00
The total cost is 3600×5 p. $3600 \times 10 = 36 000$, so 3600×5 is half of this, which is 18 000 p. In pounds this is $18 000 \div 100 = £180$.

10.   44 cm
When Mark puts together the two 5 cm sides, they don't make any part of the perimeter of the parallelogram. So the only sides that count towards the perimeter are those with lengths 9 cm and 13 cm. So the perimeter is $9 + 13 + 9 + 13 = 44$ cm.

11.   D
If I than gives away half the lace to his big sister then he has half remaining. ¹/₆ is the same as ³/₆, so when he cuts the remaining half into three pieces, each piece is ¹/₆. I than keeps one of these pieces, which is ¹/₆.

12.   4
I than gives two of the ¹/₆ pieces to his brother. So his brother gets ²/₆ of the lace, which is equivalent to ¹/₃. So I than's brother eats ¹/₃ of 12 strawberries, which is 12 ÷ 3 = 4.

Test 27 — pages 85-87

1.   35%
There are 20 squares, of which 7 have been shaded. As a fraction, this is ⁷/₂₀. Multiplying the numerator and denominator by 5 gives ³⁵/₁₀₀, which is 35%.

2.   105 days
12th June is the earliest date, and 25th September is the latest date. There are 30 days in June, so there are 18 days from 12th June to the end of June. July and August each have 31 days, and then there are 25 days from the start of September to Barry's birthday. So the difference between Barry and Mick's ages is 18 + 31 + 31 + 25 = 105 days.

3.   C
The total number of sweets is 8 + 6 + 8 + 8 + 11 = 14 + 16 + 11 = 41. This is a prime number, (so it has no factors and is not square), and it is not a factor of 100. So C is true.

4.   13
Xan now has 6 bags of sweets, so his total number of sweets is 6 × 9 = 54. The original 5 bags had a total of 8 + 6 + 8 + 11 = 14 + 16 + 11 = 41 sweets. So the new bag has 54 – 41 = 13 sweets.

5.   E
The 'Yes' sector is 200° out of 360°. As a fraction, this is ²⁰⁰/₃₆₀, which is the same as ²⁰/₃₆. Dividing the numerator and denominator by 4 simplifies this to ⁵/₉.

6.   20
The angle of the 'No' sector of the pie chart is 360 – 200 = 160°. This represents 16 people, so in the pie chart each person is 160° ÷ 16 = 10°. So the 'Yes' sector represents 200° ÷ 10° = 20 people.

7.   3 cm
A cube has six identical square faces. If the total area of all these faces is 54 cm², then each face has an area of 54 ÷ 6 = 9 cm². 9 = 3 × 3, so the side length is 3 cm.

8.   27 cm³
The cube's volume is equal to length × width × height, which is just 3 × 3 × 3 = 9 × 3 = 27 cm³.

9.   D
Moving two squares to the right of (–4, 5) ends up at (–2, 5). Moving diagonally across one square, you could end up at one of (–3, 6), (–3, 4), (–1, 6) or (–1, 4). So the answer is D.

10.   69°
In a parallelogram, there are two pairs of equal angles. All of the angles add up to 360°, so the two different angles add up to 180°. So the angle you're asked to find is 180 – 111 = 69°.

---

11.   C
If the square in the centre has a perimeter of 20 cm, then each side length is 20 ÷ 4 = 5 cm. The outer perimeter has 20 sides, so is 20 × 5 = 100 cm.

12.   B
You can see in the diagram of the stacked pots that the number of pots gets multiplied by 3 cm, and the 8 cm is added on. So the answer is 3x + 8.

Test 28 — pages 88-90

1.   £1.40
One pineapple costs 95p. One apple costs 15p, so three apples cost 3 × 15 = 45p. So in total Joan spends 95 + 45 = 140p, which is equal to £1.40.

2.   E
A and C each have 2 lines of symmetry, and B and D each have 1. E has 3 lines of symmetry.

3.   A
Writing the value in figures gives 3025 ml. 1 litre = 1000 ml, so 3025 ml = 3.025 litres.

4.   10 m
Volume = length × width × height, so:
280 = 14 × 2 × height. 14 × 2 = 28, so:
280 = 28 × height, and so the height is 10 m.

5.   20%
If you bought 4 individual glasses, it would cost 4 × £17.50. 17.5 breaks down into 10 + 7 + 0.5.
4 × 10 = 40, 4 × 7 = 28 and 4 × 0.5 = 2.
So 4 × £17.50 = £40 + £28 + £2 = £70. Buying a set would save you £70 – £56 = £14. As a fraction, this saving is ¹⁴/₇₀. Dividing the numerator and denominator by 7 gives ²/₁₀, which is ²⁰/₁₀₀, or 20%.

6.   1.25 kg
The mass of the pumpkin is equal to the difference in the readings on the two scales. The reading on the first scale is 2.5 kg. The reading on the second scale is 1.25 kg (halfway between 1 kg and 1.5 kg). 1.25 is half of 2.5, so 2.5 – 1.25 = 1.25 kg.

7.   5.00 kg
A jar of peanut butter and a jar of mustard have a combined mass of 1.25 kg. So 3 jars of each have a total mass of 3 × 1.25 kg. Adding on the pumpkin gives (3 × 1.25 kg) + 1.25 kg, which is the same as 4 × 1.25 kg. 1.25 breaks into 1 + 0.25. 4 × 1 = 4 and 4 × 0.25 = 1, so 4 × 1.25 = 4 + 1 = 5 kg.

8.   B
You're looking for the round with the third highest bar. This is Round 2.

9.   A
B is incorrect because the value for week 3 is greater than the value for week 1, but on the graph the bar for week 1 is higher. C and D are incorrect because the values for week 1 are higher than those for week 2, which you can see is wrong from the graph. E is incorrect because the value for week 4 is higher than the value for week 5, which doesn't match the graph.
A is the only set of values which matches the graph.

---

10.   3
Divide 570 by 9:
```
  0 6 3 rem 3
9)5 7 0
```
So she can fill 63 pots, with 3 pencils left over for the 64th pot.

11.   D
25 km is not shown on the graph, but 2.5 km is. From the graph, 2.5 km = 1.5 miles. Multiplying both of these values by 10 gives 25 km = 15 miles.

12.   B
12x ÷ 2 = 6x. 3x × 2 = 6x. 7x – x is 7x – 1x = 6x.
4x + 2 doesn't simplify — only one of the terms has an x. (Don't get it confused with 4x + 2x.)

Test 29 — pages 91-93

1.   7°
A right angle is 90°, so the other angle is: 90° – 83° = 7°.

2.   D
You can find this by subtracting 2 from each option and seeing which one gives a multiple of 3. 23 – 2 = 21, which is equal to 7 × 3, so 23 is the correct option.

3.   160
2 sheets of card will have a total thickness of 1 mm. 1 cm = 10 mm, so 8 cm = 80 mm. So the 8 cm pile contains 80 lots of 2 sheets: 2 × 80 = 160 sheets.

4.   D
There are 160 sheets, each of mass 5 grams. The total mass of the pile is 160 × 5. 160 breaks down into 100 + 60. 100 × 5 = 500, and 60 × 5 = 300, so 160 × 5 = 500 + 300 = 800 g. Adding on the mass of the box gives 800 + 250 = 1050 g.

5.   (3, 0)
Moving 8 squares east (to the right) gives the x coordinate 3. Moving 4 squares south (down) gives the y coordinate 0. So the new coordinates are (3, 0).

6.   C
B is 3 squares to the right of the y-axis, so C will be 3 squares to the left of the y-axis, at (–3, 0).

7.   E
10, 3 and 15 are factors of 60. Out of these, 10 and 15 are multiples of 5. 10 + 1 = 11, which isn't square. 15 + 1 = 16, which is 4², so 15 is 1 less than a square number.

8.   300 g
120 g breaks down into 80 g + 40 g, and 40 g is half of 80 g, so Damian has 1¹/₂ times the amount of butter needed. The total weight of flour and sugar in the original recipe is 100 g + 100 g = 200 g. So he should use 1¹/₂ lots of 200 g, which is 200 + 100 = 300 g.

9.   72 g
Damian only has ⁶⁰/₁₀₀ = ⁶/₁₀ of the total amount of sugar he needs, so he will only use ⁶/₁₀ of the amount of butter it says in the original recipe. The recipe uses 80 g of butter. ¹/₁₀ of this is 80 ÷ 10 = 8 g, and ⁶/₁₀ is 6 × 8 = 48 g. He has 120 g of butter altogether, so he will have 120 – 48 = 72 g left over.

---

10.   E
35% is ³⁵/₁₀₀, which is equivalent to 0.35, not 3.5.

11.   121
The sequence is the square numbers. So the 11th term is 11² = 11 × 11 = 121.

12.   D
The shape is a 6 m × 10 m rectangle with a triangle of base 7 m and height 4 m removed. The rectangle's area is = 7 × 2 = 14 m². So the answer is 60 – 14 = 46 m²

Test 30 — pages 94-96

1.   7
The 'Paint' sector is a right angle, so it makes up ¹/₄ of the circle. So ¹/₄ of the people said that paint is their favourite. This is 28 ÷ 4 = 7.

2.   B
25 minutes after 13:30 is 13:55. 10 minutes after this is 14:05. Then, breaking down the final hour into a half into 1 hour + 30 minutes, 1 hour after 14:05 is 15:05, and 30 minutes after this is 15:35.

3.   B
Viewed from above, there will be 4 squares across, plus 1 square below the 4th square from the left. This is B.

4.   C
There are 3 + 5 + 12 = 20 ties in total, of which 3 + 12 = 15 are not spotty. As a fraction, this is ¹⁵/₂₀. Dividing numerator and denominator by 5 gives ³/₄.

5.   4:1
The ratio is 12:3. Dividing both sides of this ratio by 3 simplifies it to 4:1.

6.   C
The reflected shape will look like this →
So the new coordinates of P are (11, 4).
7.   90
For every 1 card that Lara has, Elise has 3. So Lara has 1 out of every 4 = ¹/₄ of the cards. ¹/₄ of 120 = 120 ÷ 4 = 30, so Lara has 30 cards, and Elise has 3 times as many: 3 × 30 = 90.

8.   60%
Rashid has 90 × 2 = 180 cards. In total, the 3 of them have 120 + 180 = 300 cards. So Rashid has ¹⁸⁰/₃₀₀ of all the cards. Dividing the numerator and denominator simplifies this to ⁶⁰/₁₀₀, which is 60%.

9.   24 miles
The mean is the total number of miles divided by the number of days. This is 120 ÷ 5. 120 breaks down into 100 + 20. 100 ÷ 5 = 20, and 20 ÷ 5 = 4, so 120 ÷ 5 = 20 + 4 = 24.

10.   C
All of the horizontal sides add up to two lots of 9 m, which is 18 m in total. All of the vertical sides add up to two lots of y + 2, which is y + 2 + y + 2 = 2y + 4. So the perimeter is 18 + 2y + 4 = 22 + 2y.

11.   D
Substitute $n = 3$ into the formula:
$10 - 4(3) = 10 - 12 = -2$.

12.   2
You know that $10 - 4n = 2$. So $4n$ is a number that subtracts from 10 to give 2. So $4n$ must be 8. This means that n is a number that multiplies by 4 to give 8, so n must be 2. So the second term is 2.

Test 31 — pages 97-99

1.   C
120 324 breaks down into $120\,000 + 324$, which is 'one hundred and twenty thousand', plus 'three hundred and twenty four'. So C is correct.

2.   D
The front of the gate has an area of $3\,m \times 4\,m = 12\,m^2$. So Marissa uses $12\,m^2$ worth of paint out of a total of $48\,m^2$. As a fraction, this is $^{12}/_{48}$. Dividing the numerator and denominator by 12 simplifies this to $^1/_4$. So she has used $^1/_4$ of the tin, and $^3/_4$ is left over.

3.   700
1 hour = 60 minutes, so 1 hour and 20 minutes is $60 + 20 = 80$ minutes. George reads 2 pages per minute, so he has read $2 \times 80 = 160$ pages during this time. He has $860 - 160 = 700$ pages left to read.

4.   C
A square has 4 equal sides, so it will have sides of $48 \div 4 = 12\,m$. So the area is $12\,m \times 12\,m = 144\,m^2$.

5.   82
$22\% + 37\% = 59\%$, so the percentage of non-fiction books is $100\% - 59\% = 41\%$. So 41 out of every 100 books are non-fiction. Madison has 200 books in total, so $41 \times 2 = 82$ are non-fiction.

6.   17%
As a fraction, $^{34}/_{200}$ of Madison's books are hardback. Dividing the numerator and denominator by 2 simplifies this to $^{17}/_{100}$, which is 17%.

7.   115°
The triangle is isosceles, so the other angle at the base of the triangle (inside the triangle) is 65°. Angles on a straight line add up to 180°, so $a = 180° - 65° = 115°$.

8.   75 minutes
Basketball has $2^1/_2$ balls and baseball has $1^1/_4$ balls. So basketball has twice as many balls as baseball. $^1/_4$ of a ball represents $60 \div 4 = 15$ minutes, so $1^1/_4$ balls represent $60 + 15 = 75$ minutes. Twice as long as this is $75 \times 2 = 150$ minutes.
So Henry spent $150 - 75 = 75$ more minutes playing basketball than baseball.

9.   D
Reuben has $2 + 5 + 8 + 1 = 16$ pairs altogether, of which $5 + 1 = 6$ are boots or slippers. As a fraction, this is $^6/_{16}$. Dividing the numerator and denominator by 2 simplifies this to $^3/_8$.

10.   15
If the mean of the 5 numbers is 12, then the sum of the 5 numbers must be $5 \times 12 = 60$. $13 + 7 + 9 + 16 = 20 + 25 = 45$. So the fifth number is $60 - 45 = 15$.
11.   0
The mean is now 10, and there are 6 numbers overall, so the total is $10 \times 6 = 60$. This is the same as the previous total, so the sixth number must be 0.

12.   8
Multiplication comes before subtraction in BODMAS, so $2 \times 25 - 1 = 50 - 1 = 49$. So you want the smallest number that will square to give more than 49. $7^2 = 49$, so the smallest possible value of x is 8.

Puzzles 6 — page 100

Equal Shapes

E.g.

In each case, rotating one of the shapes will give the other shape.

Elevenses

29 524 does divide exactly by 11.
312 581 doesn't divide exactly by 11.
The only number between 2 165 860 and 2 165 869 that is divisible by 11 is 2 165 867.
