

THE LANGUAGE OF MATHS

approximation a close estimate – an approximate answer is one that is close to the exact answer
Example 9×21 is approximately $10 \times 20 = 200$

composite number any number that is greater than 1 and is not a prime number

consecutive things that follow one after another in order
Examples 6, 7, 8 and 9 are consecutive numbers
March, April and May are consecutive months

hectare 10 000 square metres

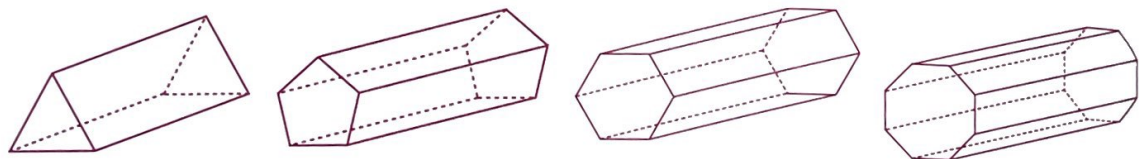

inclusive including all the things that have been mentioned – the opposite of inclusive is exclusive
Example in the question 'How many days from 1 March to 8 March inclusive?', you would include both 1 and 8 March in your calculations (making eight days)

multiple the multiple of a number can be divided exactly by that number (without a remainder)
Example 4, 6, 8 and 100 are all multiples of 2 because 2 divides into them with no remainder

negative number a number less than zero – a negative number has a minus sign in front of it
Example -1 , -2

prime number a number that divides by itself and 1 only
Example 2, 3, 5, 7, 11, 13, 17, 19, 23, 29

prism a three-dimensional (3-D) shape with two ends that are the same size and shape

square number any number made by multiplying a whole number by itself
Example 4 is a square number; it has been made by multiplying 2 by itself $2 \times 2 = 4$ or $2^2 = 4$

square root $\sqrt{\quad}$ a number that has been multiplied by itself to make a square number – a square root is the opposite of a square number
Examples the square root of 4 is 2 because $2 \times 2 = 4$
the square root of 9 is 3 because $3 \times 3 = 9$

CONTENTS

SECTION 1	Tests 1 to 12 (including revision of Mental Arithmetic 4)	4
	Number: number and place value read, write, order and compare numbers up to 10 000 000, interpret negative numbers in context and calculate intervals across zero, read Roman numerals, round any whole number to a required degree of accuracy; addition, subtraction, multiplication and division perform mental calculations with mixed operations and large numbers, use the correct order of operations to carry out calculations (BODMAS), solve addition and subtraction multi-step problems in context, use square and cubic numbers and their notations; fractions (including decimals and percentages) compare and order fractions, add and subtract fractions and mixed numbers, using the concept of equivalent fractions, associate a fraction with division and calculate decimal fraction equivalents for a simple fraction, identify the value of each digit in numbers given to three decimal places and multiply and divide numbers by 10, 100 and 1000, multiply one-digit numbers with up to two decimal places by whole numbers, recall and use equivalences between simple fractions, decimals and percentages, including in different contexts	
	Algebra: use simple formulae, generate and describe linear number sequences, express missing number problems algebraically, work with coordinates in all four quadrants	
	Measurement: solve problems involving the calculation and conversion of units of measurement using decimal notation, use, read, write and convert between standard units, convert measurements of length, mass, volume and time using decimal notation up to three decimal places, calculate the area of parallelograms and triangles, calculate, estimate and compare volume of cubes and cuboids using standard units, recognise when it is possible to use formulae for area and volume of shapes	
	Geometry: properties of shapes compare and classify geometric shapes based on their properties and sizes, find unknown angles in any triangles, quadrilaterals, and regular polygons, illustrate and name parts of circles, including radius, diameter and circumference and know that the diameter is twice the radius, recognise angles where they meet at a point, are on a straight line, or are vertically opposite, and find missing angles; position and direction describe positions on the full coordinate grid (all four quadrants), draw and translate simple shapes on the coordinate plane, and reflect them in the axes	
	Statistics: calculate and interpret the mean as an average	
	Progress Test 1	16
SECTION 2	Tests 1 to 12 (including revision of Section 1)	18
	Number: addition, subtraction, multiplication and division identify common factors, multiples, and prime numbers, use the concepts and vocabulary of prime numbers, factors (or divisors), multiples, common factors, common multiples, highest common factor, lowest common multiple, prime factorisation, including using product notation and the unique factorisation property; fractions (including decimals and percentages) multiply simple pairs of proper fractions, writing the answer in its simplest form, interpret percentages and percentage changes as a fraction or a decimal, interpret these multiplicatively, express one quantity as a percentage of another, compare two quantities using percentages, and work with percentages greater than 100%	
	Ratio and proportion: solve problems involving the relative sizes of two quantities where missing values can be found by using integer multiplication and division facts, solve problems involving unequal sharing and grouping using knowledge of fractions and multiples	
	Progress Test 2	30
SECTION 3	Tests 1 to 12 (including revision of Sections 1 and 2)	32
	Number: addition, subtraction, multiplication and division identify composite numbers, use notation for the priority of operations, including brackets, powers and roots; fractions (including decimals and percentages) divide proper fractions by whole numbers	
	Statistics: solve comparison, sum and difference problems using information presented in a line graph

Answer

- $60000 + 3000 + 70 + 8 =$ _____
- $5 \times 8 \times 7 =$ _____
- $8\text{ l } 550\text{ ml} - \frac{1}{4}\text{ l} =$ l
- $\frac{5}{6}$ of $\pounds 42 =$ _____
- a $3\frac{5}{8} = \frac{\quad}{8}$
b $6\frac{4}{5} = \frac{\quad}{5}$
- $\pounds 7.30 + 10\text{ ps} = \pounds 10$
_____ km _____ m
- $3650\text{ m} =$ _____ km _____ m
- $180^\circ - (86^\circ + 64^\circ) =$ _____
- a $\frac{19}{50} =$ _____ %
b $0.64 =$ _____ %
- $5.08 =$ _____ thousandths
- $6^3 = 6 \times 6 \times 6 =$ _____
- $\pounds 4.50 \div 7 =$ _____ p r _____ p

B

Answer

- Write in words the number which is 400 less than 50 000.

- Find in \pounds the total of 18p, 16p, 25p, 9p. _____ \pounds
- Change these improper fractions to mixed numbers.
a $\frac{35}{6}$ b $\frac{63}{8}$ a _____ b _____
- Find the difference between three 50ps and the sum of twelve 5ps and six 2ps. _____ p
- How many times is 25g contained in 4kg? _____
- Find the change from a $\pounds 5$ note after spending $\pounds 2.03$. _____ \pounds
- Which of these numbers are factors of 56?

2	3	5	7	9
---	---	---	---	---

- What percentage of 2l is 400ml? _____ %
- Approximate
a 29.56 to the nearest 10 a _____
b 180370 to the nearest 1000. b _____
- What fraction in its simplest form is equal to
a 95% b 0.04? a _____ b _____
- Find the cost of 700g at 90p per kilogram. _____ p
- Find the area of a square with sides measuring 20cm each. _____

C

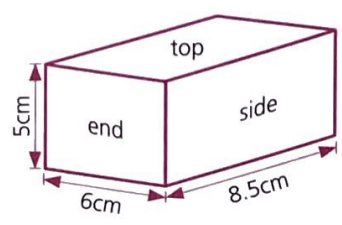

Answer

- How many thousandths must be added to 9.073 to make 10? _____
- Find the change from $\pounds 1.50$ after buying 2kg of oranges at 36p per $\frac{1}{2}$ kg. _____
- Imran faces SE and turns clockwise through $1\frac{1}{2}$ right angles. In which direction is he now facing? _____
- A car travels 40km in 30min. How many kilometres will it travel at this speed in $\frac{3}{4}$ h? _____ km
- A mango weighs 250g. How many mangoes together weigh 50kg? _____
- From the diagram find what fraction of all the employees are
a men a _____
b women. b _____
c If the total number of employees is 400 how many are under 18? c _____

- Multiply the sum of 3.6 and 2.4 by 0.4. _____
- Give the date which is five months before 1 February. _____
- Which of these angles are
 a acute angles _____
 b obtuse angles? _____

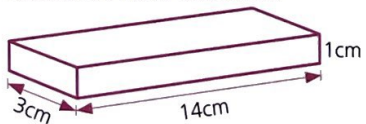

$47^\circ \ 92^\circ \ 138^\circ \ 89^\circ \ 210^\circ$
- Three presents have a mass of 450g, 800g and 230g. Find their total mass in kilograms. _____ kg
- By how many millimetres is 780mm greater than 0.5m? _____ mm
- How many 20ps have the same value as $£9.00$? _____ 20ps
- Write the answer to MD – DCCCXC in Roman numerals. _____
- How many times 0.625 is 625? _____
- Write as a percentage.
 a 17p of $£1.00$ _____ %
 b 300g of 1kg _____ %
- 300ml cost 27p. Find the cost per litre. _____ p
- Approximate
 a $10\frac{3}{10}$ to the nearest whole number _____
 b $£13.52$ to the nearest $£$. _____
- Find the area of a rectangle measuring 7m long and 1.3m wide. _____ m^2
