## MATHEMATICS

## MPC1

Unit Pure Core 1

Wednesday 10 January 20071.30 pm to 3.00 pm
For this paper you must have:
$\bullet$ an 8-page answer book

- the blue AQA booklet of formulae and statistical tables.
You must not use a calculator.

Time allowed: 1 hour 30 minutes

## Instructions

- Use blue or black ink or ball-point pen. Pencil should only be used for drawing.
- Write the information required on the front of your answer book. The Examining Body for this paper is AQA. The Paper Reference is MPC1.
- Answer all questions.
- Show all necessary working; otherwise marks for method may be lost.
- The use of calculators (scientific and graphics) is not permitted.

## Information

- The maximum mark for this paper is 75 .
- The marks for questions are shown in brackets.

## Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.

Answer all questions.

1 The polynomial $\mathrm{p}(x)$ is given by

$$
\mathrm{p}(x)=x^{3}-4 x^{2}-7 x+k
$$

where $k$ is a constant.
(a) (i) Given that $x+2$ is a factor of $\mathrm{p}(x)$, show that $k=10$.
(ii) Express $\mathrm{p}(x)$ as the product of three linear factors.
(b) Use the Remainder Theorem to find the remainder when $\mathrm{p}(x)$ is divided by $x-3$.
(2 marks)
(c) Sketch the curve with equation $y=x^{3}-4 x^{2}-7 x+10$, indicating the values where the curve crosses the $x$-axis and the $y$-axis. (You are not required to find the coordinates of the stationary points.)

2 The line $A B$ has equation $3 x+5 y=8$ and the point $A$ has coordinates $(6,-2)$.
(a) (i) Find the gradient of $A B$.
(ii) Hence find an equation of the straight line which is perpendicular to $A B$ and which passes through $A$.
(b) The line $A B$ intersects the line with equation $2 x+3 y=3$ at the point $B$. Find the coordinates of $B$.
(c) The point $C$ has coordinates $(2, k)$ and the distance from $A$ to $C$ is 5 . Find the two possible values of the constant $k$.

3 (a) Express $\frac{\sqrt{5}+3}{\sqrt{5}-2}$ in the form $p \sqrt{5}+q$, where $p$ and $q$ are integers.
(b) (i) Express $\sqrt{45}$ in the form $n \sqrt{5}$, where $n$ is an integer.
(ii) Solve the equation

$$
x \sqrt{20}=7 \sqrt{5}-\sqrt{45}
$$

giving your answer in its simplest form.

4 A circle with centre $C$ has equation $x^{2}+y^{2}+2 x-12 y+12=0$.
(a) By completing the square, express this equation in the form

$$
(x-a)^{2}+(y-b)^{2}=r^{2}
$$

(b) Write down:
(i) the coordinates of $C$;
(ii) the radius of the circle.
(c) Show that the circle does not intersect the $x$-axis.
(d) The line with equation $x+y=4$ intersects the circle at the points $P$ and $Q$.
(i) Show that the $x$-coordinates of $P$ and $Q$ satisfy the equation

$$
x^{2}+3 x-10=0
$$

(ii) Given that $P$ has coordinates $(2,2)$, find the coordinates of $Q$.
(iii) Hence find the coordinates of the midpoint of $P Q$.

5 The diagram shows an open-topped water tank with a horizontal rectangular base and four vertical faces. The base has width $x$ metres and length $2 x$ metres, and the height of the tank is $h$ metres.

The combined internal surface area of the base and four vertical faces is $54 \mathrm{~m}^{2}$.
(a) (i) Show that $x^{2}+3 x h=27$.
(ii) Hence express $h$ in terms of $x$.
(iii) Hence show that the volume of water, $V \mathrm{~m}^{3}$, that the tank can hold when full is given by

$$
V=18 x-\frac{2 x^{3}}{3}
$$

(b) (i) Find $\frac{\mathrm{d} V}{\mathrm{~d} x}$.
(ii) Verify that $V$ has a stationary value when $x=3$.
(c) Find $\frac{\mathrm{d}^{2} V}{\mathrm{~d} x^{2}}$ and hence determine whether $V$ has a maximum value or a minimum value when $x=3$.

6 The curve with equation $y=3 x^{5}+2 x+5$ is sketched below.

The curve cuts the $x$-axis at the point $A(-1,0)$ and cuts the $y$-axis at the point $B$.
(a) (i) State the coordinates of the point $B$ and hence find the area of the triangle $A O B$, where $O$ is the origin.
(ii) Find $\int\left(3 x^{5}+2 x+5\right) \mathrm{d} x$.
(3 marks)
(iii) Hence find the area of the shaded region bounded by the curve and the line $A B$.
(4 marks)
(b) (i) Find the gradient of the curve with equation $y=3 x^{5}+2 x+5$ at the point $A(-1,0)$.
(ii) Hence find an equation of the tangent to the curve at the point $A$.

7 The quadratic equation $(k+1) x^{2}+12 x+(k-4)=0$ has real roots.
(a) Show that $k^{2}-3 k-40 \leqslant 0$.
(b) Hence find the possible values of $k$.
