

General Certificate of Education June 2009 Advanced Level Examination

# MATHEMATICS Unit Pure Core 4

MPC4

Thursday 11 June 2009 9.00 am to 10.30 am

# For this paper you must have:

• an 8-page answer book

• the blue AQA booklet of formulae and statistical tables.

You may use a graphics calculator.

Time allowed: 1 hour 30 minutes

# Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Write the information required on the front of your answer book. The *Examining Body* for this paper is AQA. The *Paper Reference* is MPC4.
- Answer all questions.
- Show all necessary working; otherwise marks for method may be lost.

# Information

- The maximum mark for this paper is 75.
- The marks for questions are shown in brackets.

### Advice

• Unless stated otherwise, you may quote formulae, without proof, from the booklet.

- 1 (a) Use the Remainder Theorem to find the remainder when  $3x^3 + 8x^2 3x 5$  is divided by 3x - 1.
  - (b) Express  $\frac{3x^3 + 8x^2 3x 5}{3x 1}$  in the form  $ax^2 + bx + \frac{c}{3x 1}$ , where *a*, *b* and *c* are integers. (3 marks)
- 2 A curve is defined by the parametric equations

$$x = \frac{1}{t}, \qquad y = t + \frac{1}{2t}$$

- (a) Find  $\frac{dy}{dx}$  in terms of t. (4 marks)
- (b) Find an equation of the normal to the curve at the point where t = 1. (4 marks)
- (c) Show that the cartesian equation of the curve can be written in the form

$$x^2 - 2xy + k = 0$$

where k is an integer.

- 3 (a) Find the binomial expansion of  $(1-x)^{-1}$  up to and including the term in  $x^2$ . (2 marks)
  - (b) (i) Express  $\frac{3x-1}{(1-x)(2-3x)}$  in the form  $\frac{A}{1-x} + \frac{B}{2-3x}$ , where A and B are integers. (3 marks)
    - (ii) Find the binomial expansion of  $\frac{3x-1}{(1-x)(2-3x)}$  up to and including the term in  $x^2$ . (6 marks)
  - (c) Find the range of values of x for which the binomial expansion of  $\frac{3x-1}{(1-x)(2-3x)}$  is valid. (2 marks)

(3 marks)

4 A car depreciates in value according to the model

$$V = Ak^t$$

where  $\pounds V$  is the value of the car t months from when it was new, and A and k are constants. Its value when new was  $\pounds 12499$  and 36 months later its value was  $\pounds 7000$ .

- (a) (i) Write down the value of A. (1 mark)
  - (ii) Show that the value of k is 0.984025, correct to six decimal places. (2 marks)
- (b) The value of this car first dropped below £5000 during the *n*th month from new. Find the value of *n*. (3 marks)
- 5 A curve is defined by the equation  $4x^2 + y^2 = 4 + 3xy$ . Find the gradient at the point (1, 3) on this curve. (5 marks)
- 6 (a) (i) Show that the equation  $3\cos 2x + 7\cos x + 5 = 0$  can be written in the form  $a\cos^2 x + b\cos x + c = 0$ , where *a*, *b* and *c* are integers. (3 marks)
  - (ii) Hence find the possible values of  $\cos x$ . (2 marks)
  - (b) (i) Express  $7 \sin \theta + 3 \cos \theta$  in the form  $R \sin(\theta + \alpha)$ , where R > 0 and  $\alpha$  is an acute angle. Give your value of  $\alpha$  to the nearest 0.1°. (3 marks)
    - (ii) Hence solve the equation  $7 \sin \theta + 3 \cos \theta = 4$  for all solutions in the interval  $0^{\circ} \le \theta \le 360^{\circ}$ , giving  $\theta$  to the nearest  $0.1^{\circ}$ . (3 marks)
  - (c) (i) Given that  $\beta$  is an acute angle and that  $\tan \beta = 2\sqrt{2}$ , show that  $\cos \beta = \frac{1}{3}$ . (2 marks)
    - (ii) Hence show that  $\sin 2\beta = p\sqrt{2}$ , where p is a rational number. (2 marks)

#### Turn over for the next question

7 The points A and B have coordinates (3, -2, 5) and (4, 0, 1) respectively.

The line 
$$l_1$$
 has equation  $\mathbf{r} = \begin{bmatrix} 6 \\ -1 \\ 5 \end{bmatrix} + \lambda \begin{bmatrix} 2 \\ -1 \\ 4 \end{bmatrix}$ .

- (a) Find the distance between the points *A* and *B*. (2 marks)
- (b) Verify that *B* lies on  $l_1$ .
- (c) The line  $l_2$  passes through A and has equation  $\mathbf{r} = \begin{bmatrix} 3 \\ -2 \\ 5 \end{bmatrix} + \mu \begin{bmatrix} -1 \\ 3 \\ -8 \end{bmatrix}$ .

The lines  $l_1$  and  $l_2$  intersect at the point C. Show that the points A, B and C form an isosceles triangle. (6 marks)

8 (a) Solve the differential equation

$$\frac{\mathrm{d}x}{\mathrm{d}t} = \frac{150\cos 2t}{x}$$

given that x = 20 when  $t = \frac{\pi}{4}$ , giving your solution in the form  $x^2 = f(t)$ . (6 marks)

(b) The oscillations of a 'baby bouncy cradle' are modelled by the differential equation

$$\frac{\mathrm{d}x}{\mathrm{d}t} = \frac{150\cos 2t}{x}$$

where x cm is the height of the cradle above its base t seconds after the cradle begins to oscillate.

Given that the cradle is 20 cm above its base at time  $t = \frac{\pi}{4}$  seconds, find:

- (i) the height of the cradle above its base 13 seconds after it starts oscillating, giving your answer to the nearest millimetre; (2 marks)
- (ii) the time at which the cradle will first be 11 cm above its base, giving your answer to the nearest tenth of a second. (2 marks)
