#### **CAMBRIDGE INTERNATIONAL EXAMINATIONS**

GCE Advanced Subsidiary Level and GCE Advanced Level

## MARK SCHEME for the October/November 2012 series

# 9709 MATHEMATICS

**9709/11** Paper 1, maximum raw mark 75

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2012 series for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level components and some Ordinary Level components.

### **Mark Scheme Notes**

Marks are of the following three types:

- M Method mark, awarded for a valid method applied to the problem. Method marks are not lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, e.g. by substituting the relevant quantities into the formula. Correct application of a formula without the formula being quoted obviously earns the M mark and in some cases an M mark can be implied from a correct answer.
- A Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated method mark is earned (or implied).
- B Mark for a correct result or statement independent of method marks.
- When a part of a question has two or more "method" steps, the M marks are generally independent unless the scheme specifically says otherwise; and similarly when there are several B marks allocated. The notation DM or DB (or dep\*) is used to indicate that a particular M or B mark is dependent on an earlier M or B (asterisked) mark in the scheme. When two or more steps are run together by the candidate, the earlier marks are implied and full credit is given.
- The symbol √ implies that the A or B mark indicated is allowed for work correctly following on from previously incorrect results. Otherwise, A or B marks are given for correct work only. A and B marks are not given for fortuitously "correct" answers or results obtained from incorrect working.
- Note: B2 or A2 means that the candidate can earn 2 or 0.
  B2/1/0 means that the candidate can earn anything from 0 to 2.

The marks indicated in the scheme may not be subdivided. If there is genuine doubt whether a candidate has earned a mark, allow the candidate the benefit of the doubt. Unless otherwise indicated, marks once gained cannot subsequently be lost, e.g. wrong working following a correct form of answer is ignored.

- Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise.
- For a numerical answer, allow the A or B mark if a value is obtained which is correct to 3 s.f., or which would be correct to 3 s.f. if rounded (1 d.p. in the case of an angle). As stated above, an A or B mark is not given if a correct numerical answer arises fortuitously from incorrect working. For Mechanics questions, allow A or B marks for correct answers which arise from taking *g* equal to 9.8 or 9.81 instead of 10.

	GCE AS/A LEVEL – October/November 2012	9709	11		
The follo	The following abbreviations may be used in a mark scheme or used on the scripts:				
AEF	Any Equivalent Form (of answer is equally acceptable)		Com		

AEF	Any Equivalent Form (of answer is equally acceptable)
AG	Answer Given on the question paper (so extra checking is needed to ensure that the detailed working leading to the result is valid)
BOD	Benefit of Doubt (allowed when the validity of a solution may not be absolutely clear)
CAO	Correct Answer Only (emphasising that no "follow through" from a previous error is allowed)
CWO	Correct Working Only – often written by a 'fortuitous' answer
ISW	Ignore Subsequent Working
	ignore careequent tremming
MR	Misread
MR PA	
	Misread  Premature Approximation (resulting in basically correct work that is insufficiently

## **Penalties**

- MR -1 A penalty of MR –1 is deducted from A or B marks when the data of a question or part question are genuinely misread and the object and difficulty of the question remain unaltered. In this case all A and B marks then become "follow through √" marks. MR is not applied when the candidate misreads his own figures - this is regarded as an error in accuracy. An MR -2 penalty may be applied in particular cases if agreed at the coordination meeting.
- PA -1 This is deducted from A or B marks in the case of premature approximation. The PA –1 penalty is usually discussed at the meeting.

	GCE AS/A LEVEL – October/November 2012	9709	11 9th

1	$\frac{n}{2}[122 + (n-1)(-4)]$	M1	Attempt sum formula with $a = 61$ , $d = -4$
	$n = \frac{n}{2}[122 + (n-1)(-4)]$	A1	Equated to <i>n</i> cao
	2n(n-31) = 0 $n = 31$	DM1 A1	Attempt to solve. Accept div. by <i>n</i> cao
		[4]	
2	$y = \frac{4}{r^2} - x  (+c)$	M1A1	Attempt integration. cao
	$Sub(2,4) \rightarrow c = 5$	DM1A1 [4]	Dependent on c present
3	$A = \pi r^2 \rightarrow \left(\frac{\mathrm{d}A}{\mathrm{d}r}\right) = 2\pi r$	B1	
	$\frac{\mathrm{d}A}{\mathrm{d}t} = \frac{\mathrm{d}A}{\mathrm{d}r} \times \frac{\mathrm{d}r}{\mathrm{d}t}  \mathbf{used}$	M1	
	$\frac{\mathrm{d}r}{\mathrm{d}t} = 3$ soi	B1	
	$300\pi$ (or 942)	A1 [4]	
4	(i) $(2x - x^2)^6 = 64x^6 - 192x^7 + 240x^8$	B1B1B1	cao
	(ii) $\times (2+x)$ coeff of $x^8 = 2 \times 240 - 192$ 288	[3] M1 A1√	Looks at exactly 2 terms
	200	[2]	
5	$\frac{\mathrm{d}y}{\mathrm{d}x} = 2 - 2(x - 1)^{-3}$	B2,1,0	$-1$ each error in 2, $-2$ , $(x - 1)^{-3}$
	Sub $x = 2 \rightarrow \frac{dy}{dx} = 2 - 2 = 0 \Rightarrow \text{ stat value at } x = 2$	B1	AG
	$\frac{d^2y}{dx^2} = 6(x-1)^{-4} \text{ (and sub } x = 2)$	M1	Reasonable attempt to diff form $(x-1)^{-n}$
	$(At x = 2, \frac{d^2y}{dx^2} = 6) > 0 \implies Minimum$	A1	Correct $\frac{d^2y}{dx^2}$ and 'minimum' is required
		[5]	Or other valid method for last 2 marks
6	(i) $AC = r - r \cos \theta$	B1 [1]	
	(ii) arc $AB = \frac{4\pi}{3}$	B1	
	$\operatorname{arc} AD = \frac{\pi}{2} \times \operatorname{their} AC = \frac{\pi}{2} \times (4 - 1)$	M1A1	Allow $\pi \times their\ AC$ for M1. Allow 3.14
	$4\cos\frac{\pi}{3}) = \pi$ $BD = 4\sin\frac{\pi}{3} - their\ AC = 2\sqrt{3} - 2$	M1A1	Allow 1.46
	Perimeter = $\frac{3}{7\pi} + 2\sqrt{3} - 2$	A1	cao Accept √12
	3	[6]	
7	(i) $2(1 - \sin^2 \theta) = 3\sin \theta$	M1	Use $c^2 + s^2 = 1$
	$(2 \sin \theta - 1)(\sin \theta + 2) = 0$ $\theta = 30^{\circ} \text{ or } 150^{\circ}$	M1 A1A1	Attempt to solve cao
	(ii) $n = \frac{their\ 30}{10} = 3$	[4] B1√	ft provided <i>n</i> is an integer
	$(their \ ^{10}3)\theta = 720 + their \ ^{15}0 = 870$	M1	Allow full list up to at least 870
	$\theta = 290^{\circ}$	A1 [3]	cao
		[-]

8	(i) $y^2 = 3y \Rightarrow y(y - 3) = 0 \Rightarrow y = 3 \text{ (or 0)}$ $x = \frac{1}{2} \text{ or 5}  (\Rightarrow a = 5)$ AG	M1 A1	<b>OR</b> form equation in $x$ and attempt solution <b>OR</b> sub $x=5$ each eq (M1) $\rightarrow y = 3$ (twice)
	2	[2]	(A1)
	r <sup>3</sup> 1		(5,3) subst only once scores 0/2
	(ii) $\left[\frac{(2x-1)^{\frac{3}{2}}}{\frac{3}{2}}\right]$ [÷ 2], $\left[\frac{2}{3} \times \frac{x^2}{2} - \frac{x}{3}\right]$	B1B1B1	Or $\Delta = \frac{1}{2}(5 - \frac{1}{2}) \times 3$
	$\left[\frac{27}{3} - 0\right], \qquad \left[\frac{25}{3} - \frac{5}{3} - \left(\frac{1}{12} - \frac{1}{6}\right)\right]$	M1	Apply limits ½ and 5 for, at least, curve
	Subtract areas at some stage $\frac{9}{4}$ oe	M1 A1 [6]	Dependent on some integration cao $9/4$ with no working scores $0/6$ , but 9-27/4=9/4 scores $1/6$ (M1 subtraction)
9	(i) $\overrightarrow{CD} = -3 \begin{pmatrix} 2 \\ 1 \\ 2 \end{pmatrix} + 2 \begin{pmatrix} 4 \\ 0 \\ 6 \end{pmatrix} = \begin{pmatrix} 2 \\ -3 \\ 6 \end{pmatrix}$	B1	
	Unit vector = $\frac{1}{7} \begin{pmatrix} 2 \\ -3 \\ 6 \end{pmatrix}$	M1A1 [3]	Allow M1A1 for $\frac{1}{7} \begin{pmatrix} -2\\3\\-6 \end{pmatrix}$ or $\begin{pmatrix} \frac{2}{7} & \frac{-3}{7} & \frac{6}{7} \end{pmatrix}$ etc
	(ii) $\overrightarrow{OE} = \begin{pmatrix} 6\\3\\6 \end{pmatrix} + \begin{pmatrix} 1\\-1\frac{1}{2}\\3 \end{pmatrix} = \begin{pmatrix} 7\\1\frac{1}{2}\\9 \end{pmatrix}$	M1A1	or equivalent method
	$\overrightarrow{OE}.\overrightarrow{OD} = 56 + 0 + 108 = 164$	M1	Use of $x_1x_2 + y_1y_2 + z_1z_2$
	$ \overrightarrow{OE}  = \sqrt{132.25} (= 11.5);  \overrightarrow{OD}  = \sqrt{208}$	M1	Correct method for moduli
	$164 = \sqrt{132.25 \times \sqrt{208 \times \cos \theta}}$	M1	All connected correctly. Dependent on
	$\theta = 8.6^{\circ}$ cao	A1 [6]	$\overrightarrow{OE}, \overrightarrow{EO}, \overrightarrow{OD}, \overrightarrow{DO}$ used
10	(i) $4(x-3)^2-25$	B1B1B1	Or $a = 4$ , $b = 3$ , $c = -25$
	Vertex is (3, –25)	B1√	ft to their $(b, c)$ . Accept if not 'hence'
	(ii) range is $(g(x)) \ge -9$ Allow >	[4] B1B1 [2]	B1 for $\geq$ , B1 for $-9$ Accept e.g. $[-9,\infty]$
	(iii) $(x-3)^2 = \frac{1}{4}(y+25)$	M1	
	$x - 3 = (\pm)^{\frac{1}{2}} \sqrt{y + 25}$	DM1	Attempt to square root both sides
	$g^{-1}(x) = 3 - \frac{1}{2}\sqrt{x + 25}$	A1	cao
	Domain is $x \ge -9$	B1√	ft from their (ii)
