CAMBRIDGE INTERNATIONAL EXAMINATIONS

Cambridge International Advanced Level

MARK SCHEME for the October/November 2014 series

9709 MATHEMATICS

9709/31 Paper 3, maximum raw mark 75

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2014 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

Mark Scheme Notes

Marks are of the following three types:

- M Method mark, awarded for a valid method applied to the problem. Method marks are not lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, e.g. by substituting the relevant quantities into the formula. Correct application of a formula without the formula being quoted obviously earns the M mark and in some cases an M mark can be implied from a correct answer.
- A Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated method mark is earned (or implied).
- B Mark for a correct result or statement independent of method marks.
- When a part of a question has two or more "method" steps, the M marks are generally independent unless the scheme specifically says otherwise; and similarly when there are several B marks allocated. The notation DM or DB (or dep*) is used to indicate that a particular M or B mark is dependent on an earlier M or B (asterisked) mark in the scheme. When two or more steps are run together by the candidate, the earlier marks are implied and full credit is given.
- The symbol
 [↑] implies that the A or B mark indicated is allowed for work correctly following
 on from previously incorrect results. Otherwise, A or B marks are given for correct work only.
 A and B marks are not given for fortuitously "correct" answers or results obtained from
 incorrect working.
- Note: B2 or A2 means that the candidate can earn 2 or 0.
 B2/1/0 means that the candidate can earn anything from 0 to 2.

The marks indicated in the scheme may not be subdivided. If there is genuine doubt whether a candidate has earned a mark, allow the candidate the benefit of the doubt. Unless otherwise indicated, marks once gained cannot subsequently be lost, e.g. wrong working following a correct form of answer is ignored.

- Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise.
- For a numerical answer, allow the A or B mark if a value is obtained which is correct to 3 s.f., or which would be correct to 3 s.f. if rounded (1 d.p. in the case of an angle). As stated above, an A or B mark is not given if a correct numerical answer arises fortuitously from incorrect working. For Mechanics questions, allow A or B marks for correct answers which arise from taking *g* equal to 9.8 or 9.81 instead of 10.

			·17.	2
Page 3	Mark Scheme	Syllabus	Pull	Track of the state
	Cambridge International A Level – October/November 2014	9709	31	The of

The following abbreviations may be used in a mark scheme or used on the scripts:

AEF	Any Equivalent Form (of answer is equally acceptable)
AG	Answer Given on the question paper (so extra checking is needed to ensure that the detailed working leading to the result is valid)
BOD	Benefit of Doubt (allowed when the validity of a solution may not be absolutely clear)
CAO	Correct Answer Only (emphasising that no "follow through" from a previous error is allowed)
CWO	Correct Working Only – often written by a 'fortuitous' answer
ISW	Ignore Subsequent Working
MR	Misread
MR PA	Misread Premature Approximation (resulting in basically correct work that is insufficiently accurate)
	Premature Approximation (resulting in basically correct work that is insufficiently

Penalties

- MR −1 A penalty of MR −1 is deducted from A or B marks when the data of a question or part question are genuinely misread and the object and difficulty of the question remain unaltered. In this case all A and B marks then become "follow through \"" marks. MR is not applied when the candidate misreads his own figures this is regarded as an error in accuracy. An MR −2 penalty may be applied in particular cases if agreed at the coordination meeting.
- PA –1 This is deducted from A or B marks in the case of premature approximation. The PA –1 penalty is usually discussed at the meeting.

					°C/01.
1	Use la	w of the logarithm of a power		M1	- CA
	Obtair	a correct linear equation in any form, e.g. $x = (x-2) \ln 3$		A 1	COM

Obtain answer x = 22.281A1 [3] 2 State or imply ordinates 2, 1.1547..., 1, 1.1547... **B**1 Use correct formula, or equivalent, with $h = \frac{1}{6}\pi$ and four ordinates M1Obtain answer 1.95 **A**1 [3] (ii) Make recognisable sketch of $y = \csc x$ for the given interval B1 Justify a statement that the estimate will be an overestimate **B**1 [2]

1

4

Use chain rule correctly at least once

Obtain either $\frac{dx}{dt} = \frac{3\sin t}{\cos^4 t}$ or $\frac{dy}{dt} = 3\tan^2 t \sec^2 t$, or equivalent

Substitute $x = -\frac{1}{3}$, equate result to zero or divide by 3x + 1 and equate the remainder to zero and obtain a correct equation, e.g. $-\frac{1}{27}a + \frac{1}{9}b - \frac{1}{3} + 3 = 0$ Substitute x = 2 and equate result to 21 or divide by x - 2 and equate constant remainder to 21

Obtain a correct equation, e.g. 8a + 4b + 5 = 21Solve for a or for bObtain a = 12 and b = -20A1 [5]

M1

A1

Use $\frac{dy}{dx} = \frac{dy}{dt} \div \frac{dx}{dt}$ M1Obtain the given answerA1 [4](ii) State a correct equation for the tangent in any form
Use Pythagoras
Obtain the given answerB1
M1
A1 [3]

5 (i) Substitute
$$z = 1 + i$$
 and obtain $w = \frac{1+2i}{1+i}$

EITHER: Multiply numerator and denominator by the conjugate of the denominator, or equivalent M1 Simplify numerator to $3 + i$ or denominator to 2 A1 Obtain final answer $\frac{3}{2} + \frac{1}{2}i$, or equivalent A1

OR: Obtain two equations in x and y , and solve for x or for y M1 Obtain $x = \frac{3}{2}$ or $y = \frac{1}{2}$, or equivalent A1

Obtain final answer $\frac{3}{2} + \frac{1}{2}i$, or equivalent A1 [4]

			7,7, 3
Page 5	Mark Scheme	Syllabus	P. Nyman
	Cambridge International A Level – October/November 2014	9709	31 9//20 %
			- °C

- (ii) EITHER: Substitute w = z and obtain a 3-term quadratic equation in z, e.g. $iz^2 + z i = 0$ B1

 Solve a 3-term quadratic for z or substitute z = x + iy and use a correct method to solve for x and y M1

 OR: Substitute w = x + iy and obtain two correct equations in x and y by equating real and imaginary parts

 Solve for x and y M1

 Obtain a correct solution in any form, e.g. $z = \frac{-1 \pm \sqrt{3} i}{2i}$ A1
 - Obtain final answer $-\frac{\sqrt{3}}{2} + \frac{1}{2}i$ A1 [4]
- 6 (i) Integrate and reach $bx\ln 2x c\int x \cdot \frac{1}{x} dx$, or equivalent

 Obtain $x\ln 2x \int x \cdot \frac{1}{x} dx$, or equivalent

 A1
 - Obtain integral $x \ln 2x x$, or equivalent

 Substitute limits correctly and equate to 1, having integrated twice

 Obtain a correct equation in any form, e.g. $a \ln 2a a + 1 \ln 2 = 1$ Obtain the given answer

 A1

 [6]
 - (ii) Use the iterative formula correctly at least once
 Obtain final answer 1.94
 Show sufficient iterations to 4 d.p. to justify 1.94 to 2d.p. or show that there is a sign change in the interval (1.935, 1.945).

 A1 [3]
- 7 (i) Separate variables correctly and attempt to integrate at least one side

 Obtain term $\ln R$ Obtain $\ln x 0.57x$ Evaluate a constant or use limits x = 0.5, R = 16.8, in a solution containing terms of the form $a \ln R$ and $b \ln x$ Obtain correct solution in any form

 A1
 - Obtain a correct expression for R, e.g. $R = xe^{(3.80 0.57x)}$, $R = 44.7xe^{-0.57x}$ or $R = 33.6xe^{(0.285 0.57x)}$
 - (ii) Equate $\frac{dR}{dx}$ to zero and solve for x M1

 State or imply $x = 0.57^{-1}$, or equivalent, e.g. 1.75

 Obtain R = 28.8 (allow 28.9)

 A1 [3]
- 8 (i) Use $\sin(A + B)$ formula to express $\sin 3\theta$ in terms of trig. functions of 2θ and θ M1

 Use correct double angle formulae and Pythagoras to express $\sin 3\theta$ in terms of $\sin \theta$ M1

 Obtain a correct expression in terms of $\sin \theta$ in any form

 Obtain the given identity

 [SR: Give M1 for using correct formulae to express RHS in terms of $\sin \theta$ and $\cos 2\theta$,

[SR: Give M1 for using correct formulae to express RHS in terms of $\sin\theta$ and $\cos2\theta$, then M1A1 for expressing in terms of $\sin\theta$ and $\sin3\theta$ only, or in terms of $\cos\theta$, $\sin\theta$, $\cos2\theta$ and $\sin2\theta$, then A1 for obtaining the given identity.]

			2.7. 12
Page 6	Mark Scheme	Syllabus	P. My Oby
	Cambridge International A Level – October/November 2014	9709	31 Piths the
	-		

(ii) Substitute for x and obtain the given answer

B1 [1]

(iii) Carry out a correct method to find a value of x

M1

Obtain answers 0.322, 0.799, -1.12

A1 + A1 + A1 [4]

[Solutions with more than 3 answers can only earn a maximum of A1 + A1.]

- 9 (i) State or imply the form $\frac{A}{1-x} + \frac{B}{2-x} + \frac{C}{(2-x)^2}$
 - Use a correct method to determine a constant

 M1
 - Obtain one of A = 2, B = -1, C = 3
 - Obtain a second value

 A1
 - Obtain a third value A1 [5]
 - [The alternative form $\frac{A}{1-x} + \frac{Dx + E}{(2-x)^2}$, where A = 2, D = 1, E = 1 is marked

B1M1A1A1A1 as above.]

*OR*1:

(ii) Use correct method to find the first two terms of the expansion

of
$$(1-x)^{-1}$$
, $(2-x)^{-1}$, $(2-x)^{-2}$, $(1-\frac{1}{2}x)^{-1}$ or $(1-\frac{1}{2}x)^{-2}$

M1

Obtain correct unsimplified expansions up to the term in x^2 of each partial fraction

$$A1 \checkmark + A1 \checkmark + A1 \checkmark$$

Obtain final answer $\frac{9}{4} + \frac{5}{2}x + \frac{39}{16}x^2$, or equivalent

A1 **[5]**

[Symbolic binomial coefficients, e.g. $\binom{-1}{1}$ are not sufficient for M1. The \checkmark is on A,B,C.]

[For the A,D,E form of partial fractions, give M1 A1 \checkmark A1 \checkmark for the expansions then, if $D \neq 0$, M1 for multiplying out fully and A1 for the final answer.]

[In the case of an attempt to expand $(x^2 - 8x + 9)(1 - x)^{-1}(2 - x)^{-2}$, give M1A1A1 for the expansions, M1 for multiplying out fully, and A1 for the final answer.]

10 (i) EITHER: Find \overrightarrow{AP} (or \overrightarrow{PA}) for a point P on l with parameter λ ,

e.g.
$$\mathbf{i} - 17\mathbf{j} + 4\mathbf{k} + \lambda(-2\mathbf{i} + \mathbf{j} - 2\mathbf{k})$$

B1

M1

- Calculate scalar product of \overrightarrow{AP} and a direction vector for l and equate to zero M1 Solve and obtain $\lambda = 3$
- Carry out a complete method for finding the length of AP M1
- Obtain the given answer 15 correctly

 A1
- Calling (4, -9, 9) B, state BA (or AB) in component form, e.g. $-\mathbf{i} + 17\mathbf{j} 4\mathbf{k}$ B1
- Calculate vector product of \overrightarrow{BA} and a direction vector for l,
- e.g. $(-\mathbf{i} + 17\mathbf{j} 4\mathbf{k}) \times (-2\mathbf{i} + \mathbf{j} 2\mathbf{k})$
- Obtain correct answer, e.g. $-30\mathbf{i} + 6\mathbf{j} + 33\mathbf{k}$ A1
- Divide the modulus of the product by that of the direction vector

 Obtain the given answer correctly

 A1
- OR2: State \overrightarrow{BA} (or \overrightarrow{AB}) in component form
 - Use a scalar product to find the projection of BA (or AB) on I M1
 - Obtain correct answer in any form, e.g. $\frac{27}{\sqrt{9}}$
 - Use Pythagoras to find the perpendicular M1

Page 7	Mark Scheme	Syllabus	P. 77/77	6
	Cambridge International A Level – October/November 2014	9709	31	9ths
	Obtain the given answer correctly		A1	6
C	$\overrightarrow{DR3}$: State \overrightarrow{BA} (or \overrightarrow{AB}) in component form		B1	
	Use a scalar product to find the cosine of ABP		M1	
	Obtain correct answer in any form, e.g. $\frac{27}{\sqrt{9.\sqrt{306}}}$		A1	
	Use trig. to find the perpendicular		M1	
	Obtain the given answer correctly		A1	
\mathcal{C}	$\overrightarrow{DR4}$: State \overrightarrow{BA} (or \overrightarrow{AB}) in component form		B1	
	Find a second point C on l and use the cosine rule in triangle A			
	cosine of angle A, B, or C, or use a vector product to find the an	rea of <i>ABC</i>	M1	
	Obtain correct answer in any form		A1	
	Use trig. or area formula to find the perpendicular		M1	
	Obtain the given answer correctly		A1	
C	State correct AP (or PA) for a point P on l with parameter λ in	n any form	B1	
	Use correct method to express AP^2 (or AP) in terms of λ		M1	
	Obtain a correct expression in any form,			
	e.g. $(1-2\lambda)^2 + (-17+\lambda)^2 + (4-2\lambda)^2$		A 1	
	Carry out a method for finding its minimum (using calculus, al	gebra		
	or Pythagoras)		M1	
	Obtain the given answer correctly		A1	[5]
(ii)	EITHER: Substitute coordinates of a general point of l in equation of p			
	equate constant terms or equate the coefficient of λ to zero, or	btaining an	3.514	
	equation in a and b Obtain a correct equation $a = 4\pi$, $a = 2\pi$, $a = 4\pi$		M1* A1	
	Obtain a correct equation, e.g. $4a-9b-27+1=0$ Obtain a second correct equation, e.g. $-2a+b+6=0$		A1	
	Solve for a or for b	M16	dep*)	
	Obtain $a = 2$ and $b = -2$	1.11(A1
