Pearson Edexcel International Advanced Level In Further Pure Mathematics F3 (WFM03/01)

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <u>www.pearson.com/uk</u>

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

PEARSON EDEXCEL IAL MATHEMATICS

General Instructions for Marking

- 1. The total number of marks for the paper is 75
- 2. The Edexcel Mathematics mark schemes use the following types of marks:
- **M** marks: Method marks are awarded for 'knowing a method and attempting to apply it', unless otherwise indicated.
- **A** marks: Accuracy marks can only be awarded if the relevant method (M) marks have been earned.
- **B** marks are unconditional accuracy marks (independent of M marks)
- Marks should not be subdivided.
- 3. Abbreviations

These are some of the traditional marking abbreviations that will appear in the mark schemes.

- bod benefit of doubt
- ft follow through
- the symbol \sqrt{w} will be used for correct ft
- cao correct answer only
- cso correct solution only. There must be no errors in this part of the question to obtain this mark
- isw ignore subsequent working
- awrt answers which round to
- SC: special case
- o.e. or equivalent (and appropriate)
- d... or dep dependent
- indep independent
- dp decimal places
- sf significant figures
- * The answer is printed on the paper or ag- answer given
- L or d... The second mark is dependent on gaining the first mark
- 4. All A marks are 'correct answer only' (cao), unless shown, for example, as A1ft to indicate that previous wrong working is to be followed through. After a misread however, the subsequent A marks affected are treated as A ft, but manifestly absurd answers should never be awarded A marks.
- 5. For misreading which does not alter the character of a question or materially simplify it, deduct two from any A or B marks gained, in that part of the question affected.

- 6. If a candidate makes more than one attempt at any question:
 - If all but one attempt is crossed out, mark the attempt which is NOT crossed out.

WWW. THY THE HESE COLISCON

- If either all attempts are crossed out or none are crossed out, mark all the attempts and score the highest single attempt.
- 7. Ignore wrong working or incorrect statements following a correct answer.

General Principles for Further Pure Mathematics Marking

(But note that specific mark schemes may sometimes override these general principles)

Method mark for solving 3 term quadratic:

1. Factorisation

$$(x^2 + bx + c) = (x + p)(x + q)$$
, where $|pq| = |c|$, leading to $x = ...$

 $(ax^2 + bx + c) = (mx + p)(nx + q)$, where |pq| = |c| and |mn| = |a|, leading to x = ...

2. Formula

Attempt to use the correct formula (with values for *a*, *b* and *c*).

3. Completing the square

Solving
$$x^2 + bx + c = 0$$
: $\left(x \pm \frac{b}{2}\right)^2 \pm q \pm c = 0$, $q \neq 0$, leading to $x = ...$

Method marks for differentiation and integration:

1. Differentiation

Power of at least one term decreased by 1. $(x^n \rightarrow x^{n-1})$

2. Integration

Power of at least one term increased by 1. $(x^n \rightarrow x^{n+1})$

(a)	$\frac{dx}{d\theta} = -5\sin\theta, \ \frac{dy}{d\theta} = 4\cos\theta$ or $\frac{2x}{25} + \frac{2y}{16}\frac{dy}{dx} = 0 \text{ oe}$ or $\frac{dy}{dx} = -\frac{4x}{25}\left(1 - \frac{x^2}{25}\right)^{-\frac{1}{2}}\text{ oe}$	Correct derivatives or correct implicit differentiation or correct explicit differentiation.	B1
	$\frac{\mathrm{d}y}{\mathrm{d}x} = \frac{4\cos\theta}{-5\sin\theta}$	Divides their derivatives correctly or substitutes and rearranges	M1
	$M_N = \frac{5\sin\theta}{4\cos\theta}$	Correct perpendicular gradient rule – may be implied when they form the normal equation.	M1
	$y - 4\sin\theta = \frac{5\sin\theta}{4\cos\theta} (x - 5\cos\theta)$	Correct straight line method (any complete method). Must use their gradient of the normal.	M1
	$5x\sin\theta - 4y\cos\theta = 9\sin\theta\cos\theta^*$ or $9\sin\theta\cos\theta = 5x\sin\theta - 4y\cos\theta^*$	Achieves the printed answer with no errors and allow this answer to be obtained from the previous line. Allow $5\sin\theta x$ for $5x\sin\theta$ and $4\cos\theta y$ for $4y\cos\theta$.	A1*
		a function of x and y initially (even in the g as this is recovered correctly.

$x = \frac{9}{5}\cos\theta$	Correct x coordinate (of Q)	B1
$PF^{2} = (5\cos\theta - "3")^{2} + (4\sin\theta)^{2}$ or $PF = \sqrt{(5\cos\theta - "3")^{2} + (4\sin\theta)^{2}}$	Correct application of Pythagoras to find <i>PF</i> or <i>PF</i> ² . Their "3" should be positive but allow work in terms of <i>e</i> e.g. "5 <i>e</i> ".	M1
$= 25\cos^2\theta - 30\cos\theta + 9 + 16\sin^2\theta$ $= 25\cos^2\theta - 30\cos\theta + 9 + 16(1-\cos^2\theta)$	Applies $\sin^2 \theta = 1 - \cos^2 \theta$ to obtain a quadratic expression in $\cos \theta$. If the correct identity is not seen explicitly then their working must imply that a correct identity has been used. Depends on the previous M.	d M1
$PF = \pm (5 - 3\cos\theta)$ $PF^{2} = 9\cos^{2}\theta - 30\cos\theta + 25$	Correct expression for PF or PF^2 in terms of $\cos \theta$ with terms collected.	A1
