

**Tuesday 18 June 2013 – Morning**

**A2 GCE MATHEMATICS**

**4730/01** Mechanics 3

**QUESTION PAPER**

Candidates answer on the Printed Answer Book.

**OCR supplied materials:**

- Printed Answer Book 4730/01
- List of Formulae (MF1)

**Other materials required:**

- Scientific or graphical calculator

**Duration:** 1 hour 30 minutes

**INSTRUCTIONS TO CANDIDATES**

These instructions are the same on the Printed Answer Book and the Question Paper.

- The Question Paper will be found in the centre of the Printed Answer Book.
- Write your name, centre number and candidate number in the spaces provided on the Printed Answer Book. Please write clearly and in capital letters.
- **Write your answer to each question in the space provided in the Printed Answer Book.** Additional paper may be used if necessary but you must clearly show your candidate number, centre number and question number(s).
- Use black ink. HB pencil may be used for graphs and diagrams only.
- Answer **all** the questions.
- Read each question carefully. Make sure you know what you have to do before starting your answer.
- Do **not** write in the bar codes.
- You are permitted to use a scientific or graphical calculator in this paper.
- Give non-exact numerical answers correct to 3 significant figures unless a different degree of accuracy is specified in the question or is clearly appropriate.
- The acceleration due to gravity is denoted by  $g \text{ ms}^{-2}$ . Unless otherwise instructed, when a numerical value is needed, use  $g = 9.8$ .

**INFORMATION FOR CANDIDATES**

- This information is the same on the Printed Answer Book and the Question Paper.
- The number of marks is given in brackets [ ] at the end of each question or part question on the Question Paper.
- **You are reminded of the need for clear presentation in your answers.**
- The total number of marks for this paper is **72**.
- The Printed Answer Book consists of **12** pages. The Question Paper consists of **4** pages. Any blank pages are indicated.

**INSTRUCTION TO EXAMS OFFICER/INVIGILATOR**

- Do not send this Question Paper for marking; it should be retained in the centre or recycled. Please contact OCR Copyright should you wish to re-use this document.

1

A small object  $W$  of weight  $100\text{ N}$  is attached to one end of each of two parallel light elastic strings. One string is of natural length  $0.4\text{ m}$  and has modulus of elasticity  $20\text{ N}$ ; the other string is of natural length  $0.6\text{ m}$  and has modulus of elasticity  $30\text{ N}$ . The upper ends of both strings are attached to a horizontal ceiling and  $W$  hangs in equilibrium at a distance  $d\text{ m}$  below the ceiling (see diagram). Find  $d$ . [5]

- 2 A particle of mass  $0.3\text{ kg}$  is projected horizontally under gravity with velocity  $3.5\text{ m s}^{-1}$  from a point  $0.4\text{ m}$  above a smooth horizontal plane. The particle first hits the plane at point  $A$ ; it bounces and hits the plane a second time at point  $B$ . The distance  $AB$  is  $1\text{ m}$ . Calculate
- (i) the vertical component of the velocity of the particle when it arrives at  $A$ , and the time taken for the particle to travel from  $A$  to  $B$ , [3]
  - (ii) the coefficient of restitution between the particle and the plane, [3]
  - (iii) the impulse exerted by the plane on the particle at  $A$ . [2]
- 3 A particle  $P$  of mass  $0.2\text{ kg}$  moves on a smooth horizontal plane. Initially it is projected with velocity  $0.8\text{ m s}^{-1}$  from a fixed point  $O$  towards another fixed point  $A$ . At time  $t\text{ s}$  after projection,  $P$  is  $x\text{ m}$  from  $O$  and is moving with velocity  $v\text{ m s}^{-1}$ , with the direction  $OA$  being positive. A force of  $(1.5t - 1)\text{ N}$  acts on  $P$  in the direction parallel to  $OA$ .
- (i) Find an expression for  $v$  in terms of  $t$ . [3]
  - (ii) Find the time when the velocity of  $P$  is next  $0.8\text{ m s}^{-1}$ . [2]
  - (iii) Find the times when  $P$  subsequently passes through  $O$ . [4]
  - (iv) Find the distance  $P$  travels in the third second of its motion. [2]

- 4 Two uniform smooth spheres  $A$  and  $B$  of equal radius are moving on a horizontal surface when they collide.  $A$  has mass  $0.1 \text{ kg}$  and  $B$  has mass  $0.2 \text{ kg}$ . Immediately before the collision  $A$  is moving with speed  $3 \text{ m s}^{-1}$  along the line of centres, and  $B$  is moving away from  $A$  with speed  $1 \text{ m s}^{-1}$  at an acute angle  $\theta$  to the line of centres, where  $\cos \theta = 0.6$  (see diagram).

The coefficient of restitution between the spheres is  $0.8$ . Find

- (i) the velocity of  $A$  immediately after the collision, [6]  
 (ii) the angle turned through by the direction of motion of  $B$  as a result of the collision. [5]

5

A fixed smooth sphere of radius  $0.6 \text{ m}$  has centre  $O$  and highest point  $T$ . A particle of mass  $m \text{ kg}$  is released from rest at a point  $A$  on the sphere, such that angle  $TOA$  is  $\frac{\pi}{6}$  radians. The particle leaves the surface of the sphere at  $B$  (see diagram).

- (i) Show that  $\cos TOB = \frac{\sqrt{3}}{3}$ . [6]  
 (ii) Find the speed of the particle at  $B$ . [2]  
 (iii) Find the transverse acceleration of the particle at  $B$ . [2]

- 6 Two uniform rods  $AB$  and  $BC$ , each of length  $2l$ , are freely jointed at  $B$ . The weight of  $AB$  is  $W$  and the weight of  $BC$  is  $2W$ . The rods are in a vertical plane with  $A$  freely pivoted at a fixed point and  $C$  resting in equilibrium on a rough horizontal plane. The normal and frictional components of the force acting on  $BC$  at  $C$  are  $R$  and  $F$  respectively. The rod  $AB$  makes an angle  $30^\circ$  to the horizontal and the rod  $BC$  makes an angle  $60^\circ$  to the horizontal (see diagram).

- (i) By considering the equilibrium of rod  $BC$ , show that  $W + \sqrt{3}F = R$ . [2]
- (ii) By taking moments about  $A$  for the equilibrium of the whole system, find another equation involving  $W$ ,  $F$  and  $R$ . [4]
- (iii) Given that the friction at  $C$  is limiting, calculate the value of the coefficient of friction at  $C$ . [5]
- 7 A particle  $P$  of mass  $m$  kg is attached to one end of a light elastic string of natural length  $0.8$  m and modulus of elasticity  $39.2m$  N. The other end of the string is attached to a fixed point  $O$ . The particle is released from rest at  $O$ .
- (i) Show that, while the string is in tension, the particle performs simple harmonic motion about a point  $1$  m below  $O$ . [3]
- (ii) Show that when  $P$  is at its lowest point the extension of the string is  $0.8$  m. [3]
- (iii) Find the time after its release that  $P$  first reaches its lowest point. [6]
- (iv) Find the velocity of  $P$   $0.8$  s after it is released from  $O$ . [4]
