IYGB - MP2 PAPER Z - QUESTION 1

THE n^{th} TERM OF AN ARITHMETIC SERIES OF COMMON DIFFERENCE 2 IS GIVEN BY

$$u_n = a + (n-1)\times 2$$
$$u_n = a + 2(n-1)$$

HENCE WE NOW HAVE

u_3	u_6	u_{10}
$a+4$	$a+10$	$a+18$

AS THESE ARE IN GEOMETRIC PROGRESSION

$$\frac{a+10}{a+4} = \frac{a+18}{a+10} \Rightarrow (a+10)^2 = (a+4)(a+18)$$
$$\Rightarrow a^2+20a+100 = a^2+22a+72$$
$$\Rightarrow 28 = 2a$$
$$\Rightarrow a = 14$$

SO THE COMMON RATIO IS

$$r = \frac{a+10}{a+4} = \frac{24}{18} = \frac{4}{3}$$

IYGB - MP2 PAPER Z - QUESTION 2

a) ARITHMETIC SERIES

$$u_n = a + (n-1)d$$

$$u_{11} = 2 + 10X$$

GEOMETRIC SERIES

$$u_n = ar^{n-1}$$

$$u_{11} = 2 \times X^{10}$$

NOW THE SUM

$$\Rightarrow (2 + 10X) + 2X^{10} = 900$$

$$\Rightarrow 2X^{10} + 10X = 898$$

$$\Rightarrow X^{10} + 5X = 449$$

AS REQUIRED

b) USING FUNCTION NOTATION

$$f(X) \equiv X^{10} + 5X - 449$$

$$f(1.8) = -82.953... < 0$$

$$f(1.9) = +173.606.. > 0$$

AS $f(x)$ IS CONTINUOUS AND CHANGES SIGN IN THE INTERVAL $(1.8, 1.9)$ THERE IS AT LEAST ONE SOLUTION OF THE EQUATION IN $(1.8, 1.9)$

c) DIFFERENTIATING FIRST

$$f'(X) = 10X^9 + 5$$

BY THE N-R FORMULA

$$X_{n+1} = X_n - \frac{f(X_n)}{f'(X_n)}$$

$$X_1 = 1.8$$

$$X_2 = 1.8 - \frac{1.8^{10} + 5 \times 1.8 - 449}{10 \times 1.8^9 + 5}$$

$$\simeq 1.8417...$$

$$X_3 \approx 1.838$$
