# AP ${ }^{\circ}$ Calculus $A B$ and <br> AP ${ }^{\circledR}$ Calculus BC Exam 

Originally published in the Fall 2014 $A P^{\circledR}$ Calculus $A B$ and $A P^{\circledR}$ Calculus BC Curriculum Framework

## The College Board

The College Board is a mission-driven not-for-profit organization that connects students to college success and opportunity. Founded in 1900, the College Board was created to expand access to higher education. Today, the membership association is made up of over 6,000 of the world's leading educational institutions and is dedicated to promoting excellence and equity in education. Each year, the College Board helps more than seven million students prepare for a successful transition to college through programs and services in college readiness and college success - including the SAT ${ }^{\circ}$ and the Advanced Placement Program. The organization also serves the education community through research and advocacy on behalf of students, educators, and schools. For further information, visit www. collegeboard.org.

## AP Equity and Access Policy

The College Board strongly encourages educators to make equitable access a guiding principle for their AP programs by giving all willing and academically prepared students the opportunity to participate in AP We encourage the elimination of barriers that restrict access to AP for students from ethnic, racial, and socioeconomic groups that have been traditionally underrepresented. Schools should make every effort to ensure their AP classes reflect the diversity of their student population. The College Board also believes that all students should have access to academically challenging course work before they enrollin AP classes, which can prepare them for AP success. It is only through a commitment to equitable preparation and access that true equity and excellence canbe achieved.

## Introduction

These sample exam questions were originally included in the $A P$ Calculus $A B$ and $A P$ Calculus $B C$ Curriculum Framework, published in fall 2014. The $A P$ Calculus $A B$ and $A P$ Calculus $B C$ Course and Exam Description, which is out now, includes that curriculum framework, along with a new, unique set of exam questions. Because we want teachers to have access to all available questions that support the new exam, we are making those from the fall 2014 curriculum framework available in this supplementary document.

The sample exam questions illustrate the relationship between the curriculum framework and the redesigned $A P$ Calculus $A B$ Exam and $A P$ Calculus BC Exam, and they serve as examples of the types of questions that appear on the exam.

Each question is accompanied by a table containing the main learning objective(s), essential knowledge statement(s), and Mathematical Practices for AP Calculus that the question addresses. For multiple-choice questions, an answer key is provided. In addition, each free-response question is accompanied by an explanation of how the relevant Mathematical Practices for AP Calculus can be applied in answering the question. The information accompanying each question is intended to aid in identifying the focus of the question, with the underlying assumption that learning objectives, essential knowledge statements, and MPACs other than those listed may also partially apply. Note that in the cases where multiple learning objectives, essential knowledge statements, or MPACs are provided for a multiple-choice question, the primary one is listed first.

## AP Calculus AB Sample Exam Questions

## Multiple Choice: Section I, Part A

A calculator may not be used on questions on this part of the exam.

1. $\lim _{x \rightarrow \pi} \frac{\cos x+\sin (2 x)+1}{x^{2}-\pi^{2}}$ is
(A) $\frac{1}{2 \pi}$
(B) $\frac{1}{\pi}$
(C) 1
(D) nonexistent

| Learning Objectives | Essential Knowledge | Mathematical Practices for AP Calculus |
| :---: | :---: | :---: |
| LO 1.1C: Determine limits of functions. | EK 1.1C3: Limits of the indeterminate forms $\frac{0}{0}$ and $\frac{\infty}{\infty}$ may be evaluated using L'Hospital's Rule. | MPAC 1: Reasoning with definitions and theorems |
| LO 2.1C: Calculate derivatives. | EK 2.1C2: Specific rules can be used to calculate derivatives for classes of functions, including polynomial, rational, power, exponential, logarithmic, trigonometric, and inverse trigonometric. | MPAC 3: Implementing algebraic/computational processes |

2. $\lim _{x \rightarrow \infty} \frac{\sqrt{9 x^{4}+1}}{x^{2}-3 x+5}$ is
(A) 1
(B) 3
(C) 9
(D) nonexistent

| Learning Objectives | Essential Knowledge | Mathematical Practices <br> for AP Calculus |
| :--- | :--- | :--- |
| LO 1.1C: Determine limits of <br> functions. | EK 1.1C2: The limit of a function may be found <br> by using algebraic manipulation, alternate forms <br> of trigonometric functions, or the squeeze <br> theorem. | MPAC 3: Implementing <br> algebraic/computational <br> processes |
|  | EK 1.1A2:The concept of a limit can be extended |  |
| Lo 1.1A(b): Interpret limits |  |  |
| expressed symbolically. | infinite limits. | MPAC 2: Connecting <br> concepts |

Graph of $f$
3. The graph of the piecewise-defined function $f$ is shown in the figure above. The graph has a vertical tangent line at $x=-2$ and horizontal tangent lines at $x=-3$ and $x=-1$. What are all values of $x,-4<x<3$. at which $f$ is continuous but not differentiable?
(A) $x=1$
(B) $x=-2$ and $x=0$
(C) $x=-2$ and $x=1$
(D) $x=0$ and $x=1$

| Learning Objectives | Essential Knowledge | Mathematical Practices for AP Calculus |
| :---: | :---: | :---: |
| LO 2.2B: Recognize the connection between differentiability and continuity. | EK 2.2B1: A continuous function may fail to be differentiable at a point in its domain. | MPAC 4: Connecting multiple representations MPAC 2: Connecting |
| LO 1.2A: Analyze functions for intervals of continuity or points of discontinuity. | EK 1.2A3:Types of discontinuities include removable discontinuities, jump discontinuities, and discontinuities due to vertical asymptotes. | concepts |

4. An ice sculpture in the form of a sphere melts in such a way that it maintains its spherical shape. The volume of the sphere is decreasing at a constant rate of $2 \pi$ cubic meters per hour. At what rate, in square meters per hour, is the surface area of the sphere decreasing at the moment when the radius is 5 meters? (Note: For a sphere of radius $r$, the surface area is $4 \pi r^{2}$ and the volume is $\frac{4}{3} \pi r^{3}$.)
(A) $\frac{4 \pi}{5}$
(B) $40 \pi$
(C) $80 \pi^{2}$
(D) $100 \pi$

| LO 2.3F: Estimate solutions <br> to differential equations. | EK 2.3F1: Slope fields provide visual clues to the <br> behavior of solutions to first order differential <br> equations. | MPAC 4: Connecting <br> multiple representations |

$$
f(x)= \begin{cases}2 x-2 & \text { for } x<3 \\ 2 x-4 & \text { for } x \geq 3\end{cases}
$$

6. Let $f$ be the piecewise-linear function defined above. Which of the following statements are true?
I. $\lim _{h \rightarrow 0^{-}} \frac{f(3+h)-f(3)}{h}=2$
II. $\lim _{h \rightarrow 0^{+}} \frac{f(3+h)-f(3)}{h}=2$
III. $f^{\prime}(3)=2$
(A) None
(B) II only
(C) I and II only
(D) I, II, and III

| Learning Objectives | Essential Knowledge | Mathematical Practices for AP Calculus |
| :---: | :---: | :---: |
| LO 2.1A: Identify the derivative of a function as the limit of a difference quotient. | EK 2.1A2: The instantaneous rate of change of a function at a point can be expressed by $\lim _{h \rightarrow 0} \frac{f(a+h)-f(a)}{h}$ <br> or $\lim _{x \rightarrow a} \frac{f(x)-f(a)}{x-a},$ <br> provided that the limit exists. These are common forms of the definition of the derivative and are denoted $f^{\prime}(a)$. | MPAC 2: Connecting concepts <br> MPAC 5: Building notational fluency |
| LO 1.1A(b): Interpret limits expressed symbolically. | EK 1.1A2: The concept of a limit can be extended to include one-sided limits, limits at infinity, and infinite limits. |  |

7. If $f(x)=\int_{1}^{x^{3}} \frac{1}{1+\ln t} d t$ for $x \geq 1$, then $f^{\prime}(2)=$
(A) $\frac{1}{1+\ln 2}$
(B) $\frac{12}{1+\ln 2}$
(C) $\frac{1}{1+\ln 8}$
(D) $\frac{12}{1+\ln 8}$

| Learning Objectives | Essential Knowledge | Mathematical Practices <br> for AP Calculus |

|  | to the size of the quantity" is $\frac{d y}{d t}=k y$. | MPAC 4: Connecting <br> multiple representations |

## Multiple Choice: Section I, Part B

A graphing calculator is required for some questions on this part of the exam.

Graph of $f^{\prime}$
11. The graph of $f^{\prime}$, the derivative of the function $f$, is shown above. Which of the following could be the graph of $f$ ?
(A)

(B)

(C)

(D)

| Learning Objectives | Essential Knowledge | Mathematical Practices <br> for AP Calculus |
| :--- | :--- | :--- |
| LO 2.2A: Use derivatives to <br> analyze properties of <br> a function. | EK 2.2A3: Key features of the graphs of $f, f^{\prime}$, and <br> $f^{\prime \prime}$ are related to one another. | MPAC 4: Connecting <br> multiple representations |
| LO 2.2B: Recognize the <br> connection between <br> differentiability and continuity. | EK 2.2B2: If a function is differentiable at a <br> point, then it is continuous at that point. | MPAC 2: Connecting <br> concepts |

12. The derivative of a function $f$ is given by $f^{\prime}(x)=e^{\sin x}-\cos x-1$ for $0<x<9$. On what intervals is $f$ decreasing?
(A) $0<x<0.633$ and $4.115<x<6.916$
(B) $0<x<1.947$ and $5.744<x<8.230$
(C) $0.633<x<4.115$ and $6.916<x<9$
(D) $1.947<x<5.744$ and $8.230<x<9$

| Learning Objective | Essential Knowledge | Mathematical Practices <br> for AP Calculus |

| LO 2.2A: Use derivatives | EK 2.2A1: First and second derivatives of a <br> fo analyze properties of <br> function can provide information about the <br> function and its graph including intervals of <br> increase or decrease, local (relative) and global <br> (absolute) extrema, intervals of upward or <br> downward concavity, and points of inflection. | MPAC 4: Connecting <br> concepts |

13. The temperature of a room, in degrees Fahrenheit, is modeled by $H$, a differentiable function of the number of minutes after the thermostat is adjusted. Of the following, which is the best interpretation of $H^{\prime}(5)=2$ ?
(A) The temperature of the room is 2 degrees Fahrenheit, 5 minutes after the thermostat is adjusted.
(B) The temperature of the room increases by 2 degrees Fahrenheit during the first 5 minutes after the thermostat is adjusted.
(C) The temperature of the room is increasing at a constant rate of $\frac{2}{5}$ degree Fahrenheit per minute.
(D) The temperature of the room is increasing at a rate of 2 degrees Fahrenheit per minute, 5 minutes after the thermostat is adjusted.

| definitions and theorems |
| notational fluency |

15. A rain barrel collects water off the roof of a house during three hours of heavy rainfall. The height of the water in the barrel increases at the rate of $r(t)=4 t^{3} e^{-1.5 t}$ feet per hour, where $t$ is the time in hours since the rain began. At time $t=1$ hour, the height of the water is 0.75 foot. What is the height of the water in the barrel at time $t=2$ hours?
(A) 1.361 ft
(B) 1.500 ft
(C) 1.672 ft
(D) 2.111 ft

| LO 3.3B(b): Evaluate definite integrals. | EK 3.3B2: If $f$ is continuous on the interval $[a, b]$ and $F$ is an antiderivative of $f$, then $\int_{a}^{b} f(x) d x=F(b)-F(a)$. | algebraic/computational processes |

16. A race car is traveling on a straight track at a velocity of 80 meters per second when the brakes are applied at time $t=0$ seconds. From time $t=0$ to the moment the race car stops, the acceleration of the race car is given by $a(t)=-6 t^{2}-t$ meters per second per second. During this time period, how far does the race car travel?
(A) 188.229 m
(B) 198.766 m
(C) 260.042 m
(D) 267.089 m
$\left.\begin{array}{lll}\hline \text { Learning Objectives } & \text { Essential Knowledge } & \begin{array}{l}\text { Mathematical Practices } \\ \text { for AP Calculus }\end{array} \\ \hline \begin{array}{lll}\text { LO 3.4C: Apply definite } \\ \text { integrals to problems } \\ \text { involving motion. }\end{array} & \begin{array}{l}\text { EK 3.4C1: For a particle in rectilinear motion } \\ \text { over an interval of time, the definite integral of } \\ \text { velocity represents the particle's displacement } \\ \text { over the interval of time, and the definite } \\ \text { integral of speed represents the particle's total } \\ \text { distance traveled over the interval of time. }\end{array} & \begin{array}{l}\text { MPAC 2: Connecting } \\ \text { concepts }\end{array} \\ \text { MPAC 3: Implementing } \\ \text { algebraic/computational } \\ \text { processes }\end{array}\right]$.

## Free Response: Section II, Part A

A graphing calculator is required for problems on this part of the exam.

1. The height of the water in a conical storage tank, shown above, is modeled by a differentiable function $h$, where $h(t)$ is measured in meters and $t$ is measured in hours. At time $t=0$, the height of the water in the tank is 25 meters. The height is changing at the rate
$h^{\prime}(t)=2-\frac{24 e^{-0.025 t}}{t+4}$ meters per hour for $0 \leq t \leq 24$.
(a) When the height of the water in the tank is $h$ meters, the volume of water is $V=\frac{1}{3} \pi h^{3}$. At what rate is the volume of water changing at time $t=0$ ? Indicate units of measure.
(b) What is the minimum height of the water during the time period $0 \leq t \leq 24$ ? Justify your answer.
(c) The line tangent to the graph of $h$ at $t=16$ is used to approximate the height of the water in the tank. Using the tangent line approximation, at what time $t$ does the height of the water return to 25 meters?

| Learning Objectives | Essential Knowledge | Mathematical Practices for AP Calculus |
| :---: | :---: | :---: |
| LO 2.1C: Calculate derivatives. | EK 2.1C5:The chain rule is the basis for implicit differentiation. | MPAC 1: Reasoning with definitions and theorems |
| LO 2.3A: Interpret the meaning of a derivative within a problem. | EK 2.3A1: The unit for $f^{\prime}(x)$ is the unit for $f$ divided by the unit for $x$. | MPAC 2: Connecting concepts |
|  |  | MPAC 3: Implementing algebraic/computational processes |
| LO 2.3B: Solve problems involving the slope of a tangent | EK 2.3B2:The tangent line is the graph of a locally linear approximation of the function near the point |  |

| LO 2.3C: Solve problems involving related rates, optimization, rectilinear motion, $(B C)$ and planar motion. | EK 2.3C2:The derivative can be used to solve related rates problems, that is, finding a rate at which one quantity is changing by relating it to other quantities whose rates of change are known. | MPAC 6: Communicating |

| Learning Objectives | Essential Knowledge | Mathematical Practices <br> for AP Calculus |
| :--- | :--- | :--- |
| LO 2.3C: Solve problems <br> involving related <br> rates, optimization, <br> rectilinear motion, $(B C)$ <br> and planar motion. | EK 2.3C3: The derivative can be used to solve <br> optimization problems, that is, finding a <br> maximum or minimum value of a <br> function over a given interval. |  |
| LO 3.3B(b): Evaluate <br> definite integrals. | EK 3.3B2: If $f$ is continuous on the interval |  |
| $[a, b]$ and $F$ is an antiderivative of $f$, |  |  |
| then $\int_{a}^{b} f(x) d x=F(b)-F(a)$. |  |  |

To answer Question 1 successfully, students must apply the Mathematical Practices for AP Calculus as described below:

- Engage in reasoning with theorems (MPAC 1) in order to find the derivative of volume with respect to time as well as in using the Fundamental Theorem of Calculus to find $h(t)$ for particular values of $t$.
- Connect the concept (MPAC 2) of derivative to both the concept of optimization and the concept of slope of a tangent line.
- Use proper notational fluency (MPAC 5) to communicate (MPAC 6) the process of finding the values for $h(24)$ and $h(6.261)$ and to interpret the meaning of $h^{\prime}(t)$.
- Use algebraic manipulation (MPAC 3) to substitute $\frac{d h}{d t}$ into the expression for $\frac{d V}{d t}$ and find the equation of a tangent line.

## Free Response: Section II, Part B

No calculator is allowed for problems on this part of the exam.

2. The graph of a differentiable function $f$ is shown above for $-3 \leq x \leq 3$. The graph of $f$ has horizontal tangent lines at $x=-1, x=1$, and $x=2$. The areas of regions $A, B, C$, and $D$ are 5,4 , 5 , and 3, respectively. Let $g$ be the antiderivative of $f$ such that $g(3)=7$.
(a) Find all values of $x$ on the open interval $-3<x<3$ for which the function $g$ has a relative maximum. Justify your answer.
(b) On what open intervals contained in $-3<x<3$ is the graph of $g$ concave up? Give a reason for your answer.
(c) Find the value of $\lim _{x \rightarrow 0} \frac{g(x)+1}{2 x}$, or state that it does not exist. Show the work that leads to your answer.
(d) Let $h$ be the function defined by $h(x)=3 f(2 x+1)+4$. Find the value of $\int_{-2}^{1} h(x) d x$.

| LO 3.2C: Calculate a definite <br> integral using areas and <br> properties of definite integrals. | EK 3.2C1: In some cases, a definite <br> integral can be evaluated by using <br> geometry and the connection between <br> the definite integral and area. |
|  | Mathematical Practices <br> for AP Calculus |
| LO 3.2C: Calculate a definite | EK 3.2C2: Properties of definite integrals include <br> the integral of a constant times a function, |
| integral using areas and |  |
| properties of definite integrals. | the integral of the sum of two functions, <br> reversal of limits of integration, and the <br> integral of a function over adjacent intervals. |

To answer Question 2 successfully, students must apply the Mathematical Practices for AP Calculus as described below:

- Reason with definitions and theorems (MPAC 1) by applying the Fundamental Theorem of Calculus and the concept of area to find the integral over specific intervals.
- Confirm that the hypotheses have been satisfied when applying L'Hospital's rule to find a limit. Correctly using L'Hospital's rule involves manipulating algebraic (MPAC 3) quantities.
- Connect the concepts (MPAC 2) of a function and its derivative to identify a maximum value and to determine concavity, and connect the concepts (MPAC 2) of continuity and limit to find $g(0)$.
- Connect the graphical representation (MPAC 4) of a function to the words describing certain attributes of the function and to a symbolic description involving the function.
- Extract information from the graph of $f(x)$ to compute (MPAC 3) definite integrals for $f$ and $h$ over specified intervals.
- Build notational fluency (MPAC5) when using integration by substitution to find the integral of $h(x)=3 f(2 x+1)+4$ over an interval, including adjusting the endpoints of the interval.
- Clearly communicate (MPAC 6) the justification for why a critical point is a relative maximum and indicate the direction of concavity.

| (b) The absolute minimum must be at a critical point or an endpoint. <br> $h^{\prime}(t)=0$ when $t=6.261$.$h(t)=25+\int_{0}^{t} h^{\prime}(x) d x$$t$ $h(t)$ <br> 0 25 <br> 6.261 16.33873 <br> 24 34.56246 <br> The minimum height is 16.339 (or 16.338 ) meters. | $4:\left\{\begin{array}{l} 1: \text { considers } h^{\prime}(t)=0 \\ 1: \text { Fundamental Theorem } \\ \quad \text { of Calculus } \\ 1: \text { absolute minimum value } \\ 1: \text { justification } \end{array}\right.$ |
| (c) $\begin{aligned} & h(16)=25+\int_{0}^{16} h^{\prime}(t) d t=23.49607 \\ & h^{\prime}(16)=1.19562 \end{aligned}$ <br> An equation for the tangent line is $\begin{aligned} & y=1.196(t-16)+23.496 \\ & y=25 \text { when } t=17.258 \text { (or } 17.257 \text { ). } \end{aligned}$ | $3:\left\{\begin{array}{l} 1: h(16) \\ 1: \text { tangent line equation } \\ 1: \text { answer } \end{array}\right.$ |

## Question 2

| (a) $g$ has a relative maximum at $x=-2$ since $g^{\prime}=f$ changes sign from positive to negative at $x=-2$. | 1 : answer with justification |
| :---: | :---: |
| (b) The graph of $g$ is concave up for $-1<x<1$ and $2<x<3$ because $g^{\prime}=f$ is increasing on those intervals. | $2:\left\{\begin{array}{l}1: \text { answer } \\ 1: \text { reason }\end{array}\right.$ |
| (c) Because $g$ is continuous at $x=0, \lim _{x \rightarrow 0} g(x)=g(0)$. $\begin{aligned} & g(3)=g(0)+\int_{0}^{3} f(x) d x \\ & g(0)=g(3)-\int_{0}^{3} f(x) d x=7-(5+3)=-1 \\ & \lim _{x \rightarrow 0} g(x)+1=0 \text { and } \lim _{x \rightarrow 0} 2 x=0 . \end{aligned}$ <br> Using L'Hospital's Rule, $\lim _{x \rightarrow 0} \frac{g(x)+1}{2 x}=\lim _{x \rightarrow 0} \frac{g^{\prime}(x)}{2}=\lim _{x \rightarrow 0} \frac{f(x)}{2}=\frac{f(0)}{2}=0$ | $3:\left\{\begin{array}{l} 1: g(0) \\ 1: \text { L'Hospital's Rule } \\ 1: \text { answer } \end{array}\right.$ |
| (d) $\int_{-2}^{1} h(x) d x=\int_{-2}^{1}(3 f(2 x+1)+4) d x=3 \int_{-2}^{1} f(2 x+1) d x+\int_{-2}^{1} 4 d x$ Let $u=2 x+1$. Then $d u=2 d x$ and $\begin{aligned} 3 \int_{-2}^{1} f(2 x+1) d x+\int_{-2}^{1} 4 d x & =\frac{3}{2} \int_{-3}^{3} f(u) d u+12 \\ & =\frac{3}{2}(5-4+5+3)+12=25.5 \end{aligned}$ | $3:\left\{\begin{array}{l} 2: \text { Fundamental Theorem } \\ \quad \text { of Calculus } \\ 1: \text { answer } \end{array}\right.$ |

## AP Calculus BC Sample Exam Questions

## Multiple Choice: Section I, Part A

A calculator may not be used on questions on this part of the exam.

1. The position of a particle moving in the $x y$-plane is given by the parametric equations $x(t)=\frac{6 t}{t+1}$ and $y(t)=\frac{-8}{t^{2}+4}$. What is the slope of the line tangent to the path of the particle at the point where $t=2$ ?
(A) $\frac{1}{2}$
(B) $\frac{2}{3}$
(C) $\frac{3}{4}$
(D) $\frac{4}{3}$

|  |  | Mathematical Practices <br> Lear AP Calculus |

## Free Response: Section II, Part A

A graphing calculator is required for problems on this part of the exam.

1. At time $t \geq 0$, the position of a particle moving along a curve in the $x y$-plane is $(x(t), y(t))$, where $\frac{d x}{d t}=t-5 \cos t$ and $\frac{d y}{d t}=6 \cos (1+\sin t)$. At time $t=3$, the particle is at position $(-1,2)$.
(a) Write an equation for the line tangent to the path of the particle at time $t=3$.
(b) Find the time $t$ when the line tangent to the path of the particle is vertical. Is the direction of motion of the particle up or down at that moment? Give a reason for your answer.
(c) Find the $y$-coordinate of the particle's position at time $t=0$.
(d) Find the total distance traveled by the particle for $0 \leq t \leq 3$.

| Learning Objectives | Essential Knowledge | Mathematical Practices <br> for AP Calculus |
| :--- | :--- | :--- |
| LO 2.1C: Calculate derivatives. | EK 2.1C7: $(B C)$ Methods for calculating <br> derivatives of real-valued functions can be <br> extended to vector-valued functions, parametric | MPAC 1: Reasoning with <br> definitions and theorems |
|  | functions, and functions in polar coordinates. | MPAC 2: Connecting |
| concepts |  |  |

To answer Question 1 successfully, students must apply the Mathematical Practices for AP Calculus as described below:

- Engage in reasoning with definitions and theorems (MPAC 1) when finding the total distance traveled.
- Connect the concepts (MPAC 2) of derivative and position of a particle as well as the concepts of vertical tangent lines and motion.
- Use algebraic manipulation (MPAC 3) to find $\frac{d y}{d x}$ and the equation of a tangent line.
- Build notational fluency (MPAC 5) by expressing $\frac{d y}{d x}$ in terms of $\frac{d y}{d t}$ and $\frac{d x}{d t}$ and in communicating (MPAC 6) the process that leads to finding the $y$-coordinate and the total distance.
- Communicate (MPAC 6) using accurate and precise language and notation (MPAC 5) in reporting information provided by technology and in explaining what the sign of $\left.\frac{d y}{d t}\right|_{t=3}$ implies about the vertical direction of motion of the particle.

## Free Response: Section II, Part B

No calculator is allowed for problems on this part of the exam.
2. The function $f$ has derivatives of all orders at $x=0$, and the Maclaurin series for $f$ is

$$
\sum_{n=2}^{\infty} \frac{\ln n}{3^{n} n^{3}} x^{n}
$$

(a) Find $f^{\prime}(0)$ and $f^{(4)}(0)$.
(b) Does $f$ have a relative minimum, a relative maximum, or neither at $x=0$ ? Justify your answer.
(c) Using the ratio test, determine the interval of convergence of the Maclaurin series for $f$. Justify your answer.

| Learning Objectives | Essential Knowledge | Mathematical Practices for AP Calculus |
| :---: | :---: | :---: |
| LO 1.1A(b): Interpret limits expressed symbolically. | EK 1.1A2: The concept of a limit can be extended to include one-sided limits, limits at infinity, and infinite limits. | MPAC 1: Reasoning with definitions and theorems <br> MPAC 2: Connecting concepts |
| LO 2.2A: Use derivatives to analyze properties of a function. | EK 2.2A1: First and second derivatives of a function can provide information about the function and its graph including intervals of increase or decrease, local (relative) and global (absolute) extrema, intervals of upward or downward concavity, and points of inflection. | MPAC 3: Implementing algebraic/computational processes <br> MPAC 5: Building notational fluency |
| LO 4.1A: Determine whether a series converges or diverges. | EK 4.1A3: Common series of numbers include geometric series, the harmonic series, and $p$-series. |  |
| LO 4.1A: Determine whether a series converges or diverges. | EK 4.1A5: If a series converges absolutely, then it converges. |  |
| LO 4.1A: Determine whether a series converges or diverges. | EK 4.1A6: In addition to examining the limit of the sequence of partial sums of the series, methods for determining whether a series of numbers converges or diverges are the $n$th term test, the comparison test, the limit comparison test, the integral test, the ratio test, and the alternating series test. |  |
| LO 4.2A: Construct and use Taylor polynomials. | EK 4.2A1: The coefficient of the $n$ th-degree term in a Taylor polvnomial centered at $x=a$ for the function f is $\frac{f^{(n)}(a)}{n!}$. |  |
| LO 4.2C: Determine the radius and interval of convergence of a power series. | EK 4.2C2: The ratio test can be used to determine the radius of convergence of a power series. |  |

To answer Question 2 successfully, students must apply the Mathematical Practices for AP Calculus as described below:

- Engage in reasoning with the definition (MPAC 1) of the coefficients of the Maclaurin series to find the coefficients for $f^{\prime}(0)$ and $f^{(4)}(0)$ and in applying the ratio test and comparison test to determine convergence.
- Connect the concepts (MPAC 2) of the first and second derivative to find a relative minimum and the concepts of convergence and absolute convergence when finding the interval of convergence.
- Use algebraic manipulation (MPAC 3) including working with logarithms and functions to find specific coefficients in the Maclaurin series, the limit in the ratio test, and the interval of convergence.
- Display facility with notation (MPAC 5) in communicating (MPAC 6) the justification for why $f$ has a relative minimum and what constitutes the interval of convergence.

## Question 1

Solutions
Point Allocation

| (a) $\left.\frac{d y}{d x}\right\|_{t=3}=\left.\frac{d y / d t}{d x / d t}\right\|_{t=3}=\left.\frac{6 \cos (1+\sin t)}{t-5 \cos t}\right\|_{t=3}=0.314$ <br> An equation for the tangent line is $y=2+0.314(x+1)$. | $2:\left\{\begin{array}{l}1: \text { considers } \frac{d y}{d x} \text { at } t=3 \\ 1: \text { tangent line equation }\end{array}\right.$ |
| :---: | :---: |
| (b) The tangent line is vertical when $\frac{d x}{d t}=0$ and $\frac{d y}{d t} \neq 0$. $\frac{d x}{d t}=0$ when $t=1.30644$. <br> Because $y^{\prime}(1.30644)=-2.305884<0$, the $y$-coordinate is decreasing and so the particle is moving down at that moment. | $3:\left\{\begin{array}{l}1: \text { considers } \frac{d x}{d t}=0 \\ 1: t=1.30644 \\ 1: \text { conclusion with reason }\end{array}\right.$ |
| $\begin{aligned} \text { (c) } y(3) & =y(0)+\int_{0}^{3} y^{\prime}(t) d t \\ y(0) & =y(3)-\int_{0}^{3} y^{\prime}(t) d t=y(3)+1.63359=3.634 \quad(\text { or } 3.633) \end{aligned}$ | $2:\left\{\begin{array}{l}1: \text { Fundamental Theorem } \\ \text { of Calculus } \\ 1: \text { answer }\end{array}\right.$ |
| (d) Distance $=\int_{0}^{3} \sqrt{\left(x^{\prime}(t)\right)^{2}+\left(y^{\prime}(t)\right)^{2}} d t=13.453$ | $2:\left\{\begin{array}{l}1: \text { integral } \\ 1: \text { answer }\end{array}\right.$ |

## Question 2

| $\begin{aligned} & \text { (a) } \frac{f^{\prime}(0)}{1!}=a_{1}=0 \Rightarrow f^{\prime}(0)=0 \\ & \frac{f^{(4)}(0)}{4!}=a_{4}=\frac{\ln 4}{3^{4} 4^{3}} \Rightarrow f^{(4)}(0)=\frac{\ln 4}{3^{4} 4^{3}} \cdot 4!=\frac{\ln 4}{216} \end{aligned}$ | $2:\left\{\begin{array}{l}1: f^{\prime}(0) \\ 1: f^{(4)}(0)\end{array}\right.$ |
| :---: | :---: |
| (b) $f^{\prime}(0)=0$ $\frac{f^{\prime \prime}(0)}{2!}=a_{2}=\frac{\ln 2}{3^{2} 2^{3}} \Rightarrow f^{\prime \prime}(0)=\frac{\ln 2}{3^{2} 2^{3}} \cdot 2!=\frac{\ln 2}{36}>0$ <br> By the Second Derivative Test, $f$ has a relative minimum at $x=0$. | $2:\left\{\begin{array}{l}1: \text { considers } f^{\prime \prime}(0) \\ 1: \text { answer with justification }\end{array}\right.$ |
| (c) Using the ratio test, $\lim _{n \rightarrow \infty}\left\|\frac{\frac{\ln (n+1)}{3^{n+1}(n+1)^{3}} x^{n+1}}{\frac{\ln n}{3^{n} n^{3}} x^{n}}\right\|=\lim _{n \rightarrow \infty}\left\|\frac{\ln (n+1)}{\ln n} \cdot\left(\frac{n}{n+1}\right)^{3} \cdot \frac{x}{3}\right\|=\left\|\frac{x}{3}\right\|<1$ <br> $\|x\|<3$, therefore the radius of convergence is $R=3$, and the series converges on the interval $-3<x<3$. <br> When $x=3$, the series is $\sum^{\infty} \frac{\ln n}{n^{3}}$. | $5:\left\{\begin{array}{l}1: \text { sets up ratio } \\ 1: \text { computes limit of ratio } \\ 1: \text { determines radius } \\ \quad \text { of convergence } \\ 1: \text { considers both endpoints } \\ 1: \text { analysis and interval } \\ \quad \text { of convergence }\end{array}\right.$ |
| Because $0<\frac{\ln n}{n^{3}}<\frac{n}{n^{3}}=\frac{1}{n^{2}}$ for all $n \geq 2$ and the $p$-series $\sum_{n=2}^{\infty} \frac{1}{n^{2}}$ converges, the series $\sum_{n=2}^{\infty} \frac{\ln n}{n^{3}}$ converges by the comparison test. |  |

When $x=-3$, the series is $\sum_{n=2}^{\infty}(-1)^{n} \frac{\ln n}{n^{3}}$.
This series is absolutely convergent because $\sum_{n=2}^{\infty} \frac{\ln n}{n^{3}}$ converges.
The interval of convergence is $-3 \leq x \leq 3$.
