Each cat eats $\frac{1}{4}$ of a tin of cat food each day.

Sue buys 8 tins of cat food.

Has Sue bought enough cat food to feed her 2 cats for 14 days?

Angles on a straight line add up to 180°

$$\text{Angle } BCD = 50^\circ$$

Opposite angles are equal

$$\begin{aligned} \text{Angle } ABC &= 360 - 50 - 100 - 105 \\ &= 360 - 255 \\ &= 105^\circ \end{aligned}$$

Shahid has 300 ml of orange juice but he only has 160 ml of lemonade.

22 A bonus of £2100 is shared by 10 people who work for a company.
 40% of the bonus is shared equally between 3 managers. 1
 The rest of the bonus is shared equally between 7 salesmen.

One of the salesmen says,

2

“If the bonus is shared equally between all 10 people I will get 25% more money.”

Is the salesman correct?
 You must show how you get your answer.

① 40% of 2100 =
 $10\% = 210$
 $40\% = 840$ ← 3 manager's bonus

$$\begin{array}{r} 2100 \\ - 840 \\ \hline 1260 \end{array}$$

$7 \overline{) 1260} \begin{array}{l} 180 \\ \hline \end{array}$ ← splitting between 7 salesmen

②

$$2100 \div 10 = \pounds 210$$

Each sales man gets £210

Each salesman gets £180

25% more :
 $25\% \text{ of } 180 = 45$
 $45 + 180 = \pounds 225$

The salesman is incorrect because if it is shared equally he would get £210 not £225
