CAMBRIDGE INTERNATIONAL EXAMINATIONS

Cambridge International General Certificate of Secondary Education

MARK SCHEME for the October/November 2015 series

0606 ADDITIONAL MATHEMATICS

0606/11 Paper 1, maximum raw mark 80

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2015 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

| | | 1 | |
|---|-----------------------------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------|
| 1 | $kx^2 + (2k - 8)x + k = 0$ | M1 | for attempt to obtain a 3 term quadratic in the form $ax^2 + bx + c = 0$, where b contains a term in k and a constant |
| | $b^2 - 4ac > 0$ so $(2k - 8)^2 - 4k^2 (> 0)$ | DM1 | for use of $b^2 - 4ac$ |
| | $4k^2 - 32k + 64 - 4k^2 (>0)$ | DM1 | for attempt to simplify and solve for <i>k</i> |
| | leading to $k < 2$ only | A1 | A1 must have correct sign |
| 2 | $\left(\frac{dy}{dx}\right) = -5x(+c)$ When $x = -1$, $\frac{dy}{dx} = 2$ leading to | M1 | for attempt to integrate, do not penalise omission of arbitrary constant. |
| | $\frac{\mathrm{d}y}{\mathrm{d}x} = -5x - 3$ | A1 | Must have $\frac{dy}{dx} = \dots$ |
| | $y = -\frac{5x^2}{2} - 3x + d$ | DM1 | for attempt to integrate <i>their</i> $\frac{dy}{dx}$, but |
| | When $x = -1$, $y = 3$ leading to | | penalise omission of arbitrary constant. |
| | $y = \frac{5}{2} - \frac{5x^2}{2} - 3x$ | A1 | |
| | Alternative scheme: | | |
| | $y = ax^{2} + bx + c \text{ so } \frac{dy}{dx} = 2ax + b$ When $x = -1$, $\frac{dy}{dx} = 2$ | M1 | for use of $y = ax^2 + bx + c$, differentiation and use of conditions to give an equation in a and b |
| | | A1 | for a correct equation |
| | $\frac{d^2y}{dx^2} = 2a$ | DM1 | for a second differentiation to obtain a |
| | so $a = -\frac{5}{2}$, $b = -3$, $c = \frac{5}{2}$ | A 1 | for a , b and c all correct |

|-----------|----------------------------------------------------------------------------------------------|----------|--------------------------------------------------------------------------------------------------------------|
| 3 | $\sqrt{(\sec^2 \theta - 1)} + \sqrt{(\csc^2 \theta - 1)} = \sec \theta \csc \theta$ | | Jour.Co |
| | $LHS = \tan \theta + \cot \theta$ | B1 | may be implied by the next line |
| | $=\frac{\sin\theta}{\cos\theta}+\frac{\cos\theta}{\sin\theta}$ | B1 | for dealing with $\tan \theta$ and $\cot \theta$ in terms of $\sin \theta$ and $\cos \theta$ |
| | $=\frac{\sin^2\theta + \cos^2\theta}{\sin\theta\cos\theta}$ | M1 | for attempt to obtain as a single fraction |
| | $=\frac{1}{\sin\theta\cos\theta}$ | M1 | for the use of $\sin^2 \theta + \cos^2 \theta = 1$ in correct context |
| | $= \sec \theta \csc \theta$ | A1 | Must be convinced as AG |
| | Alternate scheme: | | |
| | $LHS = \tan \theta + \cot \theta$ | | |
| | $= \tan \theta + \frac{1}{\tan \theta}$ | B1 | may be implied by subsequent work |
| | $=\frac{\tan^2\theta+1}{\tan\theta}$ | M1 | for attempt to obtain as a single fraction |
| | $=\frac{\sec^2\theta}{\tan\theta}$ | B1 | for use of the correct identity |
| | $= \frac{\sec \theta}{\tan \theta} \times \sec \theta$ | M1 | for 'splitting' $\sec^2 \theta$ |
| | $= \csc\theta \sec\theta$ | A1 | Must be convinced as AG |
| 4 (a) (i) | 28 | B1 | |
| (ii) | 20160 | B1 | |
| (iii) | $6 \times (5 \times 4 \times 3)$ oe to give 360 $6 \times (5 \times 4 \times 3) \times 2$ | B1 | for realising that the music books can be arranged amongst themselves and consideration of the other 5 books |
| | = 720 | B1 | for the realisation that the above arrangement can be either side of the clock. |
| (b) | Either ${}^{10}C_6 - {}^7C_6 = 210 - 7$ | B1, B1 | B1 for ${}^{10}C_6$, B1 for ${}^{7}C_6$ |
| | = 203 | B1 | |
| | Or $1W 5M = 63$ 2W 4M = 105 | B1 | for 1 case correct, must be considering more than 1 different case, allow <i>C</i> notation |
| | 3W 3M = 35 $Total = 203$ | B1 B1 | for the other 2 cases, allow <i>C</i> notation for final result |

| | | | O/La |
|-------|---------------------------------------------------------------------------------------------------------------------------------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5 (i) | $\frac{dy}{dx} = (x-3)\frac{4x}{2x^2 + 1} + \ln(2x^2 + 1)$ when $x = 2$, $\frac{dy}{dx} = -\frac{8}{9} + \ln 9$ oe or 1.31 or better | B1 M1 A1 | for correct differentiation of ln function for attempt to differentiate a product for correct product, terms must be bracketed where appropriate for correct final answer |
| (ii) | $\partial y \approx \text{ (answer to (i))} \times 0.03$ = 0.0393, allow awrt 0.039 | M1 A1FT | for attempt to use small changes follow through on <i>their</i> numerical answer to (i) allow to 2 sf or better |
| 6 (i) | $A \cap B = \{3\}$ | B1 | |
| (ii) | $A \cup C = \{1, 3, 5, 6, 7, 9, 11, 12\}$ | B1 | |
| (iii) | $A' \cap C = \{1, 5, 7, 11\}$ | B1 | |
| (iv) | $(D \cup B)' = \{1, 9\}$ | B1 | |
| (v) | Any set containing up to 5 positive even numbers ≤ 12 | B1 | |
| 7 (i) | Gradient = $\frac{0.2}{0.8}$ = 0.25 b = 0.25 | M1 A1 | for attempt to find the gradient |
| | Either $6 = 0.25(2.2) + c$ Or $5.8 = 0.25(1.4) + c$ leading to $A = 233$ or $e^{5.45}$ | M1 A1 | for a correct substitution of values from either point and attempt to obtain c or solution by simultaneous equations dealing with $c = \ln A$ |
| | Alternative schemes: | Al | dealing with $\mathcal{C} = \operatorname{III} A$ |
| | Either Or $6 = b(2.2) + c$ $e^6 = A(e^{2.2})^b$ $5.8 = b(1.4) + c$ $e^{5.8} = A(e^{1.4})^b$ | M1 | for 2 simultaneous equations as shown |
| | Leading to $A = 233$ or $e^{5.45}$ and $b = 0.25$ | DM1 A1, A1 | for attempt to solve to get at least one solution for one unknown A1 for each |
| (ii) | Either $y = 233 \times 5^{0.25}$ Or $\ln y = 0.25 \ln 5 + \ln 233$ | M1 | for correct use of either equation in attempt to obtain <i>y</i> using <i>their</i> value of <i>A</i> and of <i>b</i> found in (i) |
| | leading to $y = 348$ | A1 | |

| | • | | 300 |

| 8 | $\frac{dy}{dx} = \frac{2(x^2 + 5)^{\frac{1}{2}} - \frac{1}{2}(2x)(x^2 + 5)^{-\frac{1}{2}}(2x - 1)}{x^2 + 5}$ or $\frac{dy}{dx} = 2(x^2 + 5)^{-\frac{1}{2}} - \frac{1}{2}(2x)(x^2 + 5)^{-\frac{3}{2}}(2x - 1)$ | B1 M1 A1 | for $\frac{1}{2}(2x)(x^2+5)^{-\frac{1}{2}}$ for a quotient or $-\frac{1}{2}(2x)(x^2+5)^{-\frac{3}{2}}$ for a product allow if either seen in separate working for attempt to differentiate a quotient or a correct product for all correct, allow unsimplified |
|-------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| | When $x = 2$, $y = 1$ and $\frac{dy}{dx} = \frac{4}{9}$ (allow 0.444 or 0.44) | B1, B1 | B1 for each |
| | Equation of tangent: $y - 1 = \frac{4}{9}(x - 2)$ (9y = 4x + 1) | M1 A1 | for attempt at straight line, must be tangent using <i>their</i> gradient and <i>y</i> allow unsimplified. |
| 9 (i) | $\frac{2}{3}(4+x)^{\frac{3}{2}}(+c)$ | B1,B1 | B1 for $k(4+x)^{\frac{3}{2}}$ only, B1 for $\frac{2}{3}(4+x)^{\frac{3}{2}}$ only |
| (ii) | Area of trapezium = $\left(\frac{1}{2} \times 5 \times 5\right)$ = 12.5 | M1 A1 | Condone omission of c for attempt to find the area of the trapezium |
| | Area = $\left[\frac{2}{3}(4+x)^{\frac{3}{2}}\right]_{0}^{5} - \left(\frac{1}{2} \times 5 \times 5\right)$ = $\left(\frac{2}{3} \times 27\right) - \frac{16}{3} - \frac{25}{2}$ | M1 A1 | for correct use of limits using $k(4+x)^{\frac{3}{2}}$ only (must be using 5 and 0) for $18 - \frac{16}{3}$ or equivalent |
| | (3) 3 2 = $\frac{1}{6}$ or awrt 0.17 | A1 | 3 |
| | Alternative scheme: Equation of AB $y = \frac{1}{5}x + 2$ | M1 | for a correct attempt to find the equation of AB |
| | Area = $\int_{0}^{6} \sqrt{4+x} - \left(\frac{1}{5}x+2\right) dx$ = $\left[\frac{2}{3}(4+x)^{\frac{3}{2}} - \frac{x^{2}}{10} - 2x\right]_{0}^{5}$ | M1 | for correct use of limits using $k(4+x)^{\frac{3}{2}}$ only (must be using 5 and 0) |
| | $= \left(\frac{2}{3} \times 27\right) - \frac{16}{3} - \frac{25}{2}$ $= \frac{1}{6} \text{ or awrt } 0.17$ | A1 A1 A1 | for $18 - \frac{16}{3}$ or equivalent for 12.5 or equivalent |

|--------|-------------------------------------------------------------------------------------|----|----------------------------------------------------------------------------------------------------------------------------------------------------|
| 10 (i) | All sides are equal to the radii of the circles which are also equal | B1 | for a convincing argument |
| (ii) | Angle $CBE = \frac{2\pi}{3}$ | B1 | must be in terms of π , allow 0.667π , or better |
| (iii) | $DE = 10\sqrt{3}$ | M1 | for correct attempt to find <i>DE</i> using <i>their</i> angle <i>CBE</i> |
| | | A1 | for correct <i>DE</i> , allow 17.3 or better |
| | $Arc CE = 10 \times \frac{2\pi}{3}$ | M1 | for attempt to find arc length with <i>their</i> angle <i>CBE</i> (20.94) |
| | Perimeter = $20 + 10\sqrt{3} + \frac{20\pi}{3}$ | M1 | for $10 + 10 + DE + $ an arc length |
| | = 58.3 or 58.2 | A1 | allow unsimplified |
| (iv) | Area of sector: $\frac{1}{2} \times 10^2 \times \frac{2\pi}{3} = \frac{100\pi}{3}$ | M1 | for sector area using <i>their</i> angle <i>CBE</i> allow unsimplified, may be implied |
| | Area of triangle: $\frac{1}{2} \times 10^2 \times \sin \frac{2\pi}{3} = 25\sqrt{3}$ | M1 | for triangle area using <i>their</i> angle <i>DBE</i> which must be the same as <i>their</i> angle <i>CBE</i> , allow unsimplified, may be implied |
| | Area = $\frac{100\pi}{3} + 25\sqrt{3}$ or awrt 148 | A1 | allow in either form |
| | | | |

| | <u> </u> | | 00. |

| 11 (a) (i) | $(x+3)^2-5$ | B1, B1 | B1 for 3, B1 for -5 |
|------------|-------------------------------------------|--------|------------------------------------------------------------------|
| (ii) | $y \geqslant 4 \text{ or } f \geqslant 4$ | B1 | Correct notation or statement must be used |
| (iii) | $y = \sqrt{x+5} - 3$ | M1 | for a correct attempt to find the inverse function |
| | | A1 | must be in the correct form and positive root only |
| | Domain $x \ge 4$ | B1FT | Follow through on <i>their</i> answer to (ii), must be using x |
| (b) | $h^2g(x) = h^2(e^x)$ | M1 | for correct order |
| | $= h(5e^x + 2)$ | M1 | for dealing with h ² |
| | $=25e^{x}+12$ | | |
| | $25e^x + 12 = 37,$ | DM1 | for solution of equation (dependent on both previous M marks) |
| | leading to $x = 0$ | A1 | previous wi marks) |
| | Alternative scheme 1: | | |
| | $hg(x) = h^{-1}(37)$ | M1 | for correct order |
| | $h^{-1}(37) = 7$ | M1 | for dealing with h ⁻¹ (37) |
| | $5e^x + 2 = 7,$ | DM1 | for solution of equation (dependent on both previous M marks) |
| | leading to $x = 0$ | A1 | previous ivi marks) |
| | Alternative scheme 2: | | |
| | $g(x) = h^{-2}(37)$ | M1 | for correct order |
| | $h^{-2}(37) = 1$ | M1 | for dealing with h ⁻² (37) |
| | $e^x = 1$, | DM1 | for solution of equation (dependent on both |
| | leading to $x = 0$ | A1 | previous M marks) |
