Pearson Edexcel International GCSE Mathematics A (4MA0) Higher Paper 3HR www.mymathscloud.com

Edexcel and BTEC Qualifications

www.mymathscloud.com Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information, please visit our website at www.edexcel.com.

Our website subject pages hold useful resources, support material and live feeds from our subject advisors giving you access to a portal of information. If you have any subject specific questions about this specification that require the help of a subject specialist, you may find our Ask The Expert email service helpful.

www.edexcel.com/contactus

Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

January 2018 Publications Code 4MA0_3HR_1801_MS All the material in this publication is copyright © Pearson Education Ltd 2018

General Marking Guidance

- www.mymathscloud.com All candidates must receive the same treatment. Examiners must mark the first candidate in exactly • the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown • they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where • the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately. •
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full • marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will • be awarded and exemplification may be limited.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative • response.

Types of mark

- M marks: method marks
- A marks: accuracy marks
- B marks: unconditional accuracy marks (independent of M marks)

Abbreviations

- \circ cao correct answer only
- \circ ft follow through
- isw ignore subsequent working
- SC special case
- oe or equivalent (and appropriate)
- \circ dep dependent
- \circ indep independent
- \circ eeoo each error or omission

• No working

www.mymathscloud.com If no working is shown then correct answers normally score full marks If no working is shown then incorrect (even though nearly correct) answers score no marks.

• With working

If there is a wrong answer indicated on the answer line always check the working in the body of the script (and on any diagrams), and award any marks appropriate from the mark scheme. If it is clear from the working that the "correct" answer has been obtained from incorrect working, award 0 marks.

Any case of suspected misread loses A (and B) marks on that part, but can gain the M marks. If working is crossed out and still legible, then it should be given any appropriate marks, as long as it has not been replaced by alternative work.

If there is a choice of methods shown, then no marks should be awarded, unless the answer on the answer line makes clear the method that has been used.

If there is no answer on the answer line then check the working for an obvious answer.

• Ignoring subsequent work

It is appropriate to ignore subsequent work when the additional work does not change the answer in a way that is inappropriate for the question: eg. Incorrect cancelling of a fraction that would otherwise be correct.

It is not appropriate to ignore subsequent work when the additional work essentially makes the answer incorrect eg algebra.

Transcription errors occur when candidates present a correct answer in working, and write it incorrectly on the answer line; mark the correct answer.

Parts of questions •

Unless allowed by the mark scheme, the marks allocated to one part of the question CANNOT be awarded in another.

				mm.myn.
Question	Working	Answer	Mark	Notes
1 (a)	5x + 5y - 3x + 3y	2x + 8y	2	M1
				A1
(b)		t^{10}	1	B1
(\mathbf{c})		m ¹²	1	B1
(0)		m	1	
2	$\angle ADF = 180 - 124 (= 56) \text{ or } \angle ADF - \frac{360 - 2 \times 124}{(-56)}$	112	4	M1
	$\frac{1}{2} = \frac{1}{2} = \frac{1}$			N(1
	$ZDAE = ZADE = 56^{\circ}$			M1
	$\angle AEC = 2 \times 56^{\circ}$			M1 for 2×56 or for $\angle AED =$
				$180 - 2 \times 56^{\circ} (=68)$ and
				∠ <i>AEC</i> = 180 – '68'
				A1
