## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.
- **Types of mark**
  - M marks: method marks
  - A marks: accuracy marks
  - B marks: unconditional accuracy marks (independent of M marks)
- **Abbreviations**
  - cao – correct answer only
  - ft – follow through
  - isw – ignore subsequent working
  - SC - special case
  - oe – or equivalent (and appropriate)
  - dep – dependent
  - indep – independent
  - eeo – each error or omission

- **No working**

If no working is shown then correct answers normally score full marks

If no working is shown then incorrect (even though nearly correct) answers score no marks.

- **With working**

If there is a wrong answer indicated on the answer line always check the working in the body of the script (and on any diagrams), and award any marks appropriate from the mark scheme.

If it is clear from the working that the "correct" answer has been obtained from incorrect working, award 0 marks.

Any case of suspected misread loses A (and B) marks on that part, but can gain the M marks.

If working is crossed out and still legible, then it should be given any appropriate marks, as long as it has not been replaced by alternative work.

If there is a choice of methods shown, then no marks should be awarded, unless the answer on the answer line makes clear the method that has been used.

If there is no answer on the answer line then check the working for an obvious answer.

- **Ignoring subsequent work**

It is appropriate to ignore subsequent work when the additional work does not change the answer in a way that is inappropriate for the question: eg. Incorrect cancelling of a fraction that would otherwise be correct.

It is not appropriate to ignore subsequent work when the additional work essentially makes the answer incorrect eg algebra.

Transcription errors occur when candidates present a correct answer in working, and write it incorrectly on the answer line; mark the correct answer.

- **Parts of questions**

Unless allowed by the mark scheme, the marks allocated to one part of the question CANNOT be awarded in another.

**International GCSE Maths:** Apart from Question 9, 10, 14b, 19b and 22, where the mark scheme states otherwise, the correct answer, unless clearly obtained by an incorrect method, should be taken to imply a correct method.

		$\frac{1}{2(x-8)}$	5	A1 dep on at least M2 for $\frac{1}{2(x-8)}$ or $\frac{1}{2x-16}$ or $\frac{-1}{16-2x}$ or $\frac{-1}{2(8-x)}$

22	E.g. $\frac{3}{2(x+6)} - \frac{x-15}{(x-8)(x+6)} \text{ or } \frac{3}{2x+12} - \frac{x-15}{(x-8)(x+6)}$			M1 $x^2 - 2x - 48$ correctly factorised NB : May be seen at a later stage
	$\frac{3(x^2 - 2x - 48) - (2x+12)(x-15)}{(2x+12)(x^2 - 2x - 48)}$			M1 for a correct common denominator with numerators correct  This may be a single fraction or two fractions; denominators may be expanded – if so, must be correct.
	E.g. $\frac{3x^2 - 6x - 144 - 2x^2 + 30x - 12x + 180}{(2x+12)(x^2 - 2x - 48)} \text{ or } \frac{x^2 + 12x + 36}{(2x+12)(x^2 - 2x - 48)}$			M1 for a correct single fraction with brackets in numerator removed correctly; denominators may be expanded – if so, must be correct ( $2x^3 + 8x^2 - 120x - 576$ )
	E.g. $\frac{(x+6)^2}{(2x+12)(x^2 - 2x - 48)} \text{ or } \frac{x+6}{2(x-8)(x+6)}$			M1 for a correct single fraction with the numerator factorised; denominators may be expanded – if so, must be correct.
