## Student-friendly mark scheme

Please note that this mark scheme is not the one used by examiners for making scripts. It is intended more as a guide to good practice, indicating where marks are given for correct answers. As such, it doesn't show follow-through marks (marks that are awarded despite errors being made) or special cases.

It should also be noted that for many questions, there may be alternative methods of finding correct solutions that are not shown here - they will be covered in the formal mark scheme.

## NOTES ON MARKING PRINCIPLES

Guidance on the use of codes within this mark scheme

M1 - method mark. This mark is generally given for an appropriate method in the context of the question. This mark is given for showing your working and may be awarded even if working is incorrect.

P1 - process mark. This mark is generally given for setting up an appropriate process to find a solution in the context of the question.

A1 - accuracy mark. This mark is generally given for a correct answer following correct working.

B1 - working mark. This mark is usually given when working and the answer cannot easily be separated.

C1 - communication mark. This mark is given for explaining your answer or giving a conclusion in context supported by your working.

Some questions require all working to be shown; in such questions, no marks will be given for an answer with no working (even if it is a correct answer).

## Question 1 (Total 4 marks)

| Part | Working or answer an examiner might <br> expect to see | Mark | Notes |
| :---: | :--- | :---: | :--- |
| (a) | $\frac{10}{6+8+9+7+10} \times \frac{10}{6+8+9+7+10}$ <br> $=\frac{10}{40} \times \frac{10}{40}=\frac{100}{1600}$ | M1 | This mark is given for a method to find <br> the probability of a score of 5 both times |
|  | $\frac{1}{16}$ | A1 | This mark is given for the correct answer <br> only |
| (b) | $\frac{6}{40} \times 100$ | M1 | This mark is given for a method to find <br> the percentage of times a score of 1 is <br> expected |
|  | 15 | This mark is given for the correct answer <br> only |  |

Question 2 (Total 3 marks)

| Part | Working or answer an examiner might <br> expect to see | Mark | Notes |
| :--- | :--- | :---: | :--- |
|  | For example: <br> $a \times 8$ for the first product, where $0 \leq a \leq 10$ | M1 | This mark is given for finding five <br> products within the intervals <br> (including end points) |
|  | $\frac{(5 \times 8)+(15 \times 10)+(25 \times 7)+(35 \times 2)+(45 \times 3)}{8+10+7+2+3}$ | M1 | This mark is given for a method to <br> work out an estimate for the mean <br> amount of snow per day |
| $=\frac{40+150+175+70+135}{30}=\frac{570}{30}$ | A1 | This mark is given for the correct <br> answer only |  |
| 19 |  |  |  |

Question 3 (Total 4 marks)

| Part | Working or answer an examiner might <br> expect to see | Mark | Notes |
| :--- | :--- | :--- | :--- |
|  | $\left(5 \frac{4}{9}\right)^{-\frac{1}{2}}=\left(\frac{49}{9}\right)^{-\frac{1}{2}}=\left(\frac{9}{49}\right)^{\frac{1}{2}}=\frac{3}{7}$ | M1 | This mark is given for a method to <br> simplify $\left(5 \frac{4}{9}\right)^{-\frac{1}{2}}$ |
|  | $\frac{3}{7} \times\left(4 \frac{2}{3}\right)=\frac{3}{7} \times \frac{14}{3}=2$ | M1 | This mark is given for a method to <br> simplify the numerator |
|  | M1 | This mark is given for a method to divide <br> by the denominator |  |
|  | A1 | This mark is given for a correct answer <br> only |  |

Question 4 (Total 2 marks)

| Part | Working an or answer examiner might <br> expect to see | Mark | Notes |
| :--- | :--- | :---: | :--- |
|  | $(180,-1)$ | B1 | This mark is given for 180 |
|  |  | B1 | This mark is given for -1 |

## Question 5 (Total 3 marks)

| Part | Working or answer an examiner might <br> expect to see | Mark | Notes |
| :--- | :--- | :---: | :--- |
|  | $\frac{4 \pi}{2 \times \pi \times 18}=\frac{x}{360}$ | P1 | This mark is given for a process to use <br> equal proportions |
|  | $x=\frac{4 \pi}{36 \pi} \times 360$ | P1 | This mark is given for a process to find <br> the value of $x$ |
|  | 40 | A1 | This mark is given for the correct answer <br> only |

Question 6 (Total 3 marks)

| Part | Working or answer an examiner might <br> expect to see | Mark | Notes |
| :--- | :--- | :---: | :--- |
| $\frac{3}{11} \times \frac{8}{10}$ or $\frac{7}{11} \times \frac{4}{10}$ or $\frac{1}{11} \times \frac{10}{10}$ P1 <br> $\left(\frac{3}{11} \times \frac{8}{10}\right)+\left(\frac{7}{11} \times \frac{4}{10}\right)+\left(\frac{1}{11} \times \frac{10}{10}\right)$ P1 <br> process to find a probability of two cards  <br> of different colours  |  |  |  |
|  | This mark is given for a complete <br> process to find a probability of two cards <br> of different colours |  |  |
|  | A1 | This mark is given for a correct answer <br> only (accept equivalent fractions, <br> decimals) |  |

## Question 7 (Total 3 marks)

| Part | Working or answer an examiner might expect to see | Mark | Notes |
| :---: | :---: | :---: | :---: |
|  | $O B A=\frac{180-x}{2}$ <br> angles in a triangle add up to 180 <br> base angles of an isosceles triangle are equal | M1 | This mark is given for a method to find the angle $O B A$ |
|  | $\begin{aligned} A B C & =90-\frac{180-x}{2}=\frac{180}{2}-\frac{180-x}{2} \\ & =\frac{180}{2}-\frac{180}{2}+\frac{x}{2}=\frac{x}{2}\left(\text { or } \frac{1}{2} x\right) \end{aligned}$ <br> the tangent to a circle is perpendicular to the radius | M1 | This mark is given for a method to find the angle $A B C$ |
|  | or <br> the angle at the centre of a circle is twice the angle at the circumference (alternate segment theorem) | C1 | This mark is given for correct reasons given for each stage of working |

Question 8 (Total 5 marks)

| Part | Working an or answer examiner might expect to see | Mark | Notes |
| :---: | :---: | :---: | :---: |
|  | $\frac{(x+1)-x}{x(x+1)}=4 \quad \text { so } \quad \frac{1}{x(x+1)}=4,$ | P1 | This mark is given for a process to find a common denominator |
|  | $\begin{aligned} & 1=4 x(x+1) \\ & 1=4 x^{2}+4 x \\ & 4 x^{2}+4 x-1 \end{aligned}$ | P1 | This mark is given for rearranging to express the equation as a quadratic to be solved |
|  | $\frac{-4 \pm \sqrt{4^{2}-4 \times 4 \times-1}}{2 \times 4}$ <br> or $\left(x+\frac{1}{2}\right)^{2}-\frac{1}{2}=0$ | P1 | This mark is given for a process to substitute into the quadratic formula or to complete the square |
|  | $\frac{-4 \pm \sqrt{32}}{8}$ or $\pm \sqrt{\frac{1}{2}}-\frac{1}{2}$ | A1 | This mark is given for finding solutions for the values of $x$ |
|  | $-\frac{1}{2}+\frac{1}{2} \sqrt{ } 2, \quad-\frac{1}{2}-\frac{1}{2} \sqrt{ } 2$ | A1 | This mark is given for answers in the form $a \pm b \sqrt{ } 2$ as required |

## Question 9 (Total 4 marks)

| Part | Working or answer an examiner might <br> expect to see | Mark | Notes |
| :--- | :--- | :---: | :--- |
|  | $\frac{8-3}{6--1}=\frac{5}{7}$ | P 1 | This mark is given for a process to find <br> the gradient from the centre of the circle <br> to the point $(6,8)$ |
|  | Gradient of tangent to the circle at $A=-\frac{7}{5}$ | P 1 | The mark is given for a process using <br> $m n=-1$ to find the gradient to the <br> tangent |
|  | $40=-\frac{7}{5} x+c$ so $5 y=-7 x+c$ | P 1 | This mark is given for a process to find <br> the equation of the tangent |
| $7 x+5 y-82=0$ | A1 | This mark is given for a correct answer <br> only in the form $a x+b y+c=0$ |  |

## Question 10 (Total 4 marks)

| Part | Working or answer an examiner might expect to see | Mark | Notes |
| :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & y=k \sqrt{ } t \quad \text { or } y \propto \sqrt{ } t \\ & t=\frac{k}{x^{3}} \end{aligned} \text { or } t \propto \frac{1}{x^{3}}$ | P1 | This mark is given for a process to set up proportionality (the mark is awarded for any one of these four expressions seen) |
|  | $\begin{aligned} & 15=k \sqrt{ } 9 \text { so } k=5 \\ & 8=\frac{k}{2^{3}} \text { so } k=64 \end{aligned}$ | P1 | This mark is given for a process to find the constants of proportionality |
|  | $y=5 \sqrt{\frac{64}{x^{3}}}$ | P1 | This mark is given for a process to combine equations |
|  | $y=\frac{40}{\sqrt{x^{3}}}$ or $\frac{40}{x^{\frac{3}{2}}}$ | A1 | This mark is given for a correct answer only |

## Question 11 (Total 4 marks)

| Part | Working an or answer examiner might expect to see | Mark | Notes |
| :---: | :---: | :---: | :---: |
|  | $\sin 30^{\circ}=0.5$ | P1 | This mark is given for recognising the sine of $30^{\circ}$ is 0.5 |
|  | $\frac{6.5}{\sin A B C}=\frac{10.7}{\sin 30}$ | P1 | This mark is given for the use of the sine rule |
|  | $\sin A B C=\frac{6.5 \times 0.5}{10.7}$ | P1 | This mark is given for a process to find the value of $\sin A B C$ |
|  | $\frac{65}{214}$ | A1 | This mark is given for a correct answer only |

## Question 12 (Total 3 marks)

Question 13 (Total 5 marks)

| Part | Working an or answer examiner might <br> expect to see | Mark | Notes |
| :---: | :--- | :---: | :--- |
| (a) | For example: <br> $10 \div \sqrt{ } 5=2 \sqrt{ } 5,20 \sqrt{ } 5 \div 10=2 \sqrt{ } 5$, <br> $200 \div 20 \sqrt{ } 5=2 \sqrt{ } 5,400 \sqrt{ } 5 \div 200=2 \sqrt{ } 5$ | P1 | This mark is given for a process to <br> identify the common ratio |
|  | $400 \sqrt{ } 5 \times 2 \sqrt{ } 5=4000$ | A1 | This mark is given for the correct answer <br> only |
| (b) | $\frac{5 \sqrt{ } 2}{8} \div \frac{5 \sqrt{ } 2}{4}=\frac{1}{2}$ | P1 | This mark is given for a process to find <br> the ratio of the 4th and 6th terms |
|  | $\frac{5 \sqrt{ } 2}{4} \div\left(\frac{1}{\sqrt{2}}\right)^{3}=\frac{5 \sqrt{ } 2}{4} \times 2 \sqrt{ } 2=\frac{10 \times 2}{4}$ | P1 | This mark is given for a process to find <br> the first term |
|  | 5 | A1 | This mark is given for the correct answer <br> only |

## Question 14 (Total 5 marks)

| Part | Working or answer an examiner might <br> expect to see | Mark | Notes |
| :---: | :--- | :---: | :--- |
| (a) | $\overrightarrow{A C}=5(3 \mathbf{a}+4 \mathbf{b})$ | M1 | This mark is given for a method to find <br> $\overrightarrow{A C}$ in terms of $\overrightarrow{A B}$ |
|  | $\overrightarrow{A C}=5 \overrightarrow{A B}$ and so they are on the same <br> line and in the same direction | C 1 | This mark is given for a correct proof <br> with reason given |
| (b) | $\overrightarrow{D F}=(3 \mathbf{e}+6 \mathbf{f})+(-10.5 \mathbf{e}-21 \mathbf{f})$ <br> $=(-7.5 \mathbf{e}-15 \mathbf{f})$ | P 1 | This mark is given for a process to find <br> the length of $\overrightarrow{D F}$ |
|  | $\overrightarrow{D F}=-2.5 \overrightarrow{D E}$ | This mark is given for a process to find a <br> multiplicative relationship between $\overrightarrow{D E}$ <br> and $\overrightarrow{D F}$ |  |
|  | $5: 2$ | A1 | This mark is given for the correct answer <br> only (or equivalent) |

## Question 15 (Total 4 marks)

| Part | Working or answer an examiner might <br> expect to see | Mark | Notes |
| :---: | :--- | :---: | :--- |
| (a) | $(2 m+1)^{2}=\left(4 m^{2}+4 m+1\right)$ <br> $(2 n-1)^{2}=\left(4 n^{2}-4 n+1\right)$ | M1 | This mark is given for a method to <br> expand $(2 m+1)^{2}$ or $(2 n-1)^{2}$ |
| $\left(4 m^{2}+4 m+1\right)-\left(4 n^{2}-4 n+1\right)$ <br> $=4 m^{2}+4 m+1-4 n^{2}+4 n-1$ <br> $=4 m^{2}+4 m-4 n^{2}+4 n$ | M1 | This mark is given for a method to find <br> an expression with both expansions <br> correct |  |
|  | $=4\left(m^{2}+m-n^{2}+n\right)$ <br> $=4 m\left(m+1-n^{2}+n\right)$ <br> $=4(m+n)(m-n+1)$ | C1 | This mark is given for a full proof with <br> no errors |
| (b) | Yes, Sophia is correct. <br> $2 m+1$ and $2 n-1$ are both odd numbers <br> and the right-hand side of the equation is a <br> multiple of 4 | C1 | This mark is given for a correct reason <br> supported by a valid explanation |

Question 16 (Total 4 marks)

| Part | Working an or answer examiner might expect to see | Mark | Notes |
| :---: | :---: | :---: | :---: |
|  | $\frac{(x-1)+3(2 x-1)}{(2 x-1)(x-1)}=1$ | M1 | This mark is given for a method to find a common denominator |
|  | $\begin{aligned} & 7 x-4=2 x^{2}-3 x+1 \\ & 2 x^{2}-10 x+5=0 \end{aligned}$ | M1 | This mark is given for a method to rearrange to find a quadratic |
|  | $\frac{10 \pm \sqrt{100-4 \times 2 \times 5}}{2 \times 2}=\frac{10 \pm \sqrt{ } 60}{4}$ | M1 | This mark is given for a method to solve the quadratic equation |
|  | $\frac{5 \pm \sqrt{ } 15}{2}$ | A1 | This mark is given for the correct answer in the form $\frac{p+\sqrt{ } q}{2}$ |

Question 17 (Total 2 marks)

| Part | Working or answer an examiner might <br> expect to see | Mark | Notes |
| :--- | :--- | :---: | :--- |
|  | Enlargement <br> Scale factor $\frac{1}{2}$ <br> Centre $(0,2)$ | B2 | These marks are given for all three <br> aspects of the transformation stated <br> (B1 is given for two aspects stated) |

## Question 18 (Total 6 marks)

| Part | Working an or answer examiner might expect to see | Mark | Notes |
| :---: | :---: | :---: | :---: |
| (a) | $\frac{4}{3} \pi r^{3}=\frac{1}{3} \pi r^{2} h \quad \text { so } 4 r=h$ | P1 | This mark is given for a process to equate the two volumes |
|  | 1:4 | P1 | This mark is given for the correct answer only |
| (b) | $4 \pi r^{2}=\pi r^{2}+\pi r l$ | P1 | This mark is given for a process to equate the two surface areas |
|  | $4 \pi r^{2}=\pi r^{2}+\pi r \sqrt{h^{2}+r^{2}}$ | P1 | The mark is given for a process to substitute $l=\sqrt{h^{2}+r^{2}}$ |
|  | $\begin{aligned} 3 \pi r^{2} & =\pi r \sqrt{h^{2}+r^{2}} \\ 3 r & =\sqrt{h^{2}+r^{2}} \\ 9 r^{2} & =h^{2}+r^{2} \\ 8 r^{2} & =h^{2} \end{aligned}$ | P1 | This mark is given for a process to find an equation in terms of $r^{2}$ |
|  | $1: \sqrt{ } 8$ | A1 | This mark is given for the correct answer only |

## Question 19 (Total 4 marks)

| Part | Working or answer an examiner might <br> expect to see | Mark | Notes |
| :--- | :--- | :--- | :--- |
| $1-0.75=0.25$ M1 <br> Let $x$ be the probability of passing the <br> practical test and $(1-x)$ be the probability <br> of failing the practical test. Then <br> $0.75(1-x)+0.25 x$ M1 <br> This mark is given for a method to find <br> the probability of failing the theory test  <br> $0.75(1-x)+0.25 x=0.36$ This mark is given for a method to form <br> an expression for the probability of <br> passing only one of the two tests <br> (awarded for $0.75(1-x)$ or $0.25 x$ seen) <br> $0.75-0.75 x+0.25 x=0.36$ <br> $0.75-0.5 x=0.36$ <br> $0.5 x=0.39$ <br> $x=0.78$ M1 <br> This mark is given for a method to form <br> an equation for the probability of passing <br> only one of the two tests (may be seen on <br> a tree diagram)  | This mark is given for the correct answer <br> only (or an equivalent fraction or <br> percentage) |  |  |

Question 20 (Total 3 marks)

| Part | Working or answer an examiner might expect to see | Mark | Notes |
| :---: | :---: | :---: | :---: |
|  | Let the diameter of semicircle $\mathbf{A}=a$, that of $\mathbf{B}=b$ and that of $\mathbf{C}=c$ <br> Using Pythagoras' theorem, $a^{2}=b^{2}+c^{2}$ | M1 | This mark is given for a method to show the relationship using Pythagoras' theorem, |
|  | Area of semicircular region $\mathbf{A}=\frac{\pi}{2}\left(\frac{a}{2}\right)^{2}=\frac{\pi}{8} a^{2}$ <br> Area of semicircular region $\mathbf{B}=\frac{\pi}{2}\left(\frac{b}{2}\right)^{2}=\frac{\pi}{8} b^{2}$ <br> Area of semicircular region $\mathbf{C}=\frac{\pi}{2}\left(\frac{c}{2}\right)^{2}=\frac{\pi}{8} c^{2}$ | M1 | This mark is given for a method to find the areas of the semicircular regions using $\frac{\pi r^{2}}{2}$ |
|  | $a^{2}=b^{2}+c^{2}$ and multiplying each term by $\frac{\pi}{8}$ gives $\frac{\pi}{8} a^{2}=\frac{\pi}{8} b^{2}+\frac{\pi}{8} c^{2}$, so <br> area of region $\mathbf{A}=$ area of region $\mathbf{B}+$ area of region $\mathbf{C}$ | C1 | This mark is given for a full explanation |

*Question 21 (Total 5 marks)

| Part | Working an or answer examiner might expect to see | Mark | Notes |
| :---: | :---: | :---: | :---: |
|  | $\pi \times 4^{2} \times \frac{60}{360}=\frac{8 \pi}{3}$ | P1 | This mark is given for a process to find the area of a sector of angle $60^{\circ}$ |
|  | $\frac{1}{2} \times 4 \times 4 \times \sin 60^{\circ}=4 \sqrt{ } 3$ | P1 | This mark is given for a process to find the area of the equilateral triangle |
|  | $\frac{8 \pi}{3}-4 \sqrt{ } 3$ | P1 | This mark is given for a process to subtract the area of the equilateral triangle from the area of the sector |
|  | $\begin{aligned} & 16 \pi-\left(\left(4 \times \frac{8 \pi}{3}\right)+4\left(\frac{8 \pi}{3}-4 \sqrt{ } 3\right)\right)= \\ & \frac{48 \pi}{3}-\frac{32 \pi}{3}-\frac{32 \pi}{3}+16 \sqrt{ } 3 \end{aligned}$ | P1 | This mark is given for full process to find the shaded area: (the area of the circle) minus (the area of four sectors plus four lots of the equilateral triangle subtracted from the sector) |
|  | $16 \sqrt{ } 3-\frac{16 \pi}{3}$ | A1 | This mark is given for the correct answer (or equivalent) |

*This is one way of solving this problem - there are plenty of others.
