KEY STAGE

TIER **6-8**

2003

Mathematics test

Paper 1 Calculator **not** allowed

Please read this page, but do not open your booklet until your teacher tells you to start. Write your name and the name of your school in the spaces below.

First name	
Last name	
Last Hame	
School	
5 C 11 C C 1	

Remember

- The test is 1 hour long.
- You must not use a calculator for any question in this test.
- You will need: pen, pencil, rubber and a ruler.
- Some formulae you might need are on page 2.
- This test starts with easier questions.
- Try to answer all the questions.
- Write all your answers and working on the test paper do not use any rough paper. Marks may be awarded for working.
- Check your work carefully.
- Ask your teacher if you are not sure what to do.

Instructions

Answers

This means write down your answer or show your working and write down your answer.

Calculators

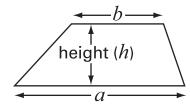

You **must not** use a calculator to answer any question in this test.

Formulae

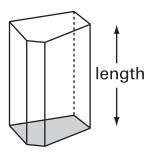

You might need to use these formulae

Trapezium

$$Area = \frac{1}{2}(a+b)h$$

Prism

Volume = area of cross-section × length

Solve these equations.
 Show your working.

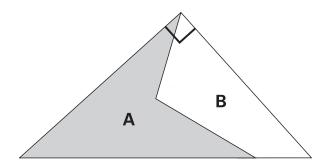

3t + 4 = t + 13

						•		•	•	
t	=	 								
							2 r	ma	ırk	s

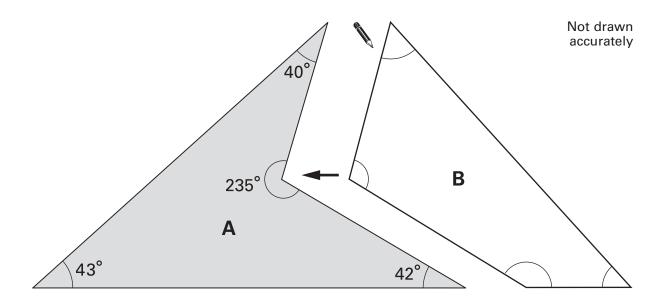

2(3n + 7) = 8

2. The drawing shows how shapes A and B fit together to make a right-angled triangle.

Work out the size of each of the angles in shape B.

Write them in the correct place in shape B below.

3. (a) Add $\frac{6}{10}$ and $\frac{6}{5}$

Now use an arrow $(\slashed{\psi})$ to show the result on the number line.

. . . . 1 mark

1 mark

(b) How many **sixths** are there in $3\frac{1}{3}$?

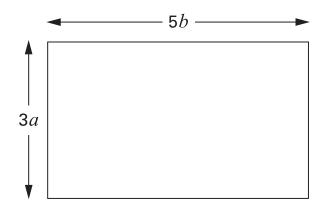

(c) Work out $3\frac{1}{3} \div \frac{5}{6}$ Show your working.

4. (a) The diagram shows a rectangle.

Its dimensions are 3a by 5b

Write **simplified expressions** for the area and the perimeter of this rectangle.

(b) A different rectangle has area $12a^2$ and perimeter 14a What are the dimensions of this rectangle?

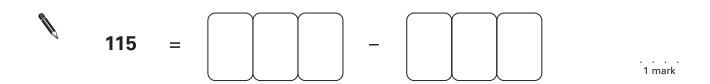

)) [) 1) () 1	
1		2		3		4		5		6
]]	

(a) Arrange these six cards to make the calculations below.

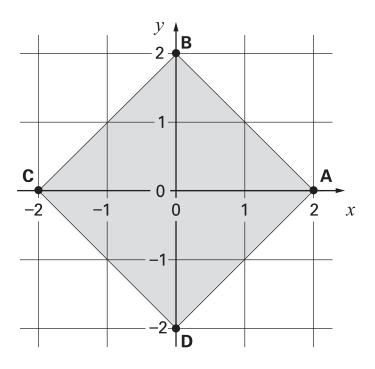

The first one is done for you.

(b) Now arrange the six cards to make a difference of 115

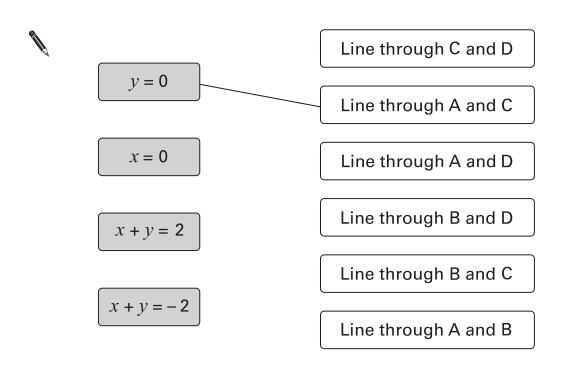

6. The diagram shows a square drawn on a square grid.

(a) The points A, B, C and D are at the vertices of the square.

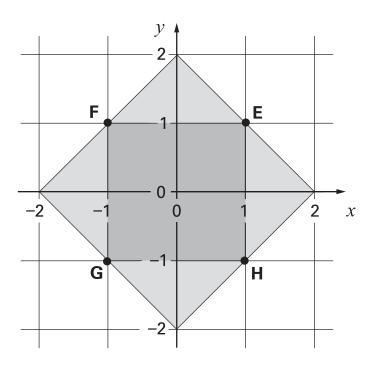

Match the correct line to each equation.

One is done for you.

2 marks

The mid-points of each side, E, F, G and H, join to make a different square.

(b) Write the equation of the straight line through **E** and **H**.

. . . . 1 mark

(c) Is y = -x the equation of the straight line through **E** and **G**?

Tick (✓) Yes or No.

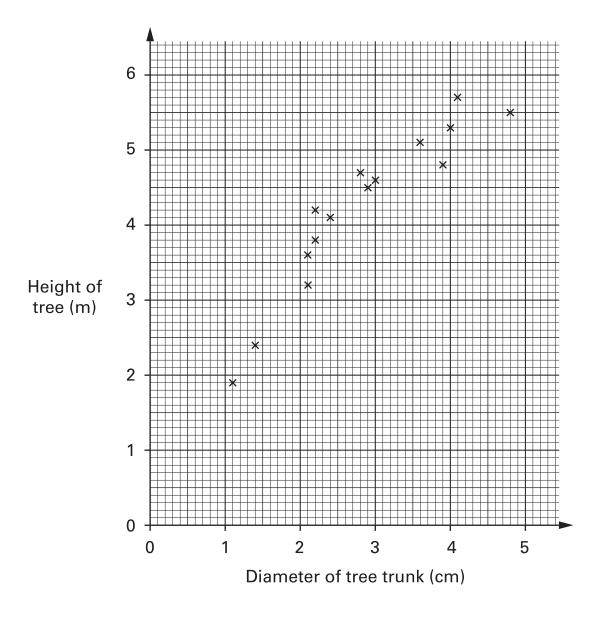

Yes

No

Explain how you know.

. . . . 1 mark 7. The scatter graph shows information about trees called poplars.

(a) What does the scatter graph show about the **relationship** between the diameter of the tree trunk and the height of the tree?

(b)	The height of a different tree is 3m. The diar Use the graph to explain why this tree is not		
, ,			 1 mark
(c)	Another tree is a poplar. The diameter of its Estimate the height of this tree.	trunk is 3.2 cm.	
		m	 1 mark
(d)	Below are some statements about drawing I on scatter graphs. For each statement, tick () to show whether		True or False.
	Lines of best fit must always		
	go through the origin.	True	False
	have a positive gradient.	True	False
	join the smallest and the largest values.	True	False
	pass through every point on the graph.	True	False
			 2 marks

8. A headteacher wants to choose a pupil from year 7, 8 or 9 to appear on television.

The headteacher gives each pupil one ticket.

Then she will select the winning ticket at random.

The table shows information about the tickets used.

	Colour of the ticket	Numbers used
Year 7	red	1 to 80
Year 8	blue	1 to 75
Year 9	yellow	1 to 90

(a) What is the probability that the winning ticket will be **blue**?

1 mark

(b) What is the probability that the winning ticket will show number 39?

1 mark

(c) The headteacher selects the winning ticket at random.

She says:

'The winning ticket number is 39'.

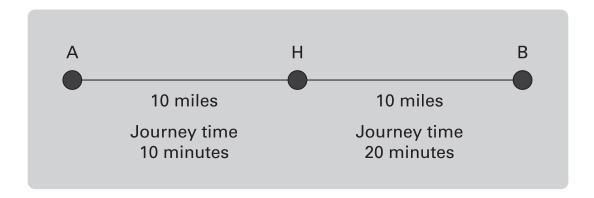

What is the probability that this winning ticket is blue?

1 mark

9. The diagram shows the distance between my home, H, and two towns, A and B.

It also shows information about journey times.

(a) What is the average speed of the journey from my home to town A?

. . . 1 mark

(b) What is the average speed of the journey from my home to town B?

1 mark

(c) I drive from town A to my home and then to town B.

The journey time is 30 minutes.

What is my average speed?

Show your working.

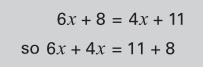

10. (a) Pupils started to solve the equation 6x + 8 = 4x + 11 in different ways. For each statement below, tick (✓) True or False.

$$6x + 8 = 4x + 11$$

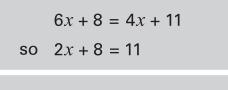

so $14x = 15x$

1	1	
True	False	

$$6x + 8 = 4x + 11$$

so $6x = 4x + 3$

True	False

$$6x + 8 = 4x + 11$$
so
$$2x = 3$$
True False

$$6x + 8 = 4x + 11$$
so
$$-3 = -2x$$
True False

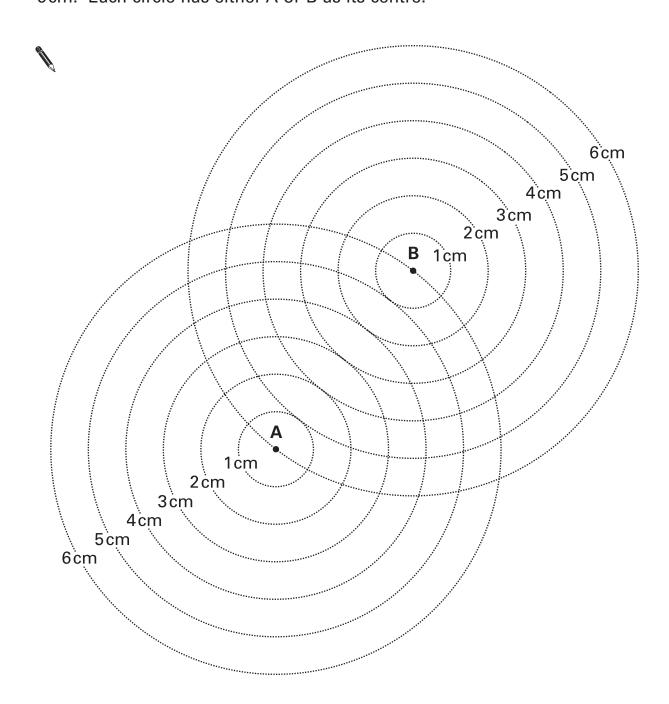

- 3 marks
- (b) A different pupil used trial and improvement to solve the equation 6x + 8 = 4x + 11Explain why trial and improvement is not a good method to use.

. . . 1 mark

11. The diagram below shows two points A and B that are 6cm apart.

Around each point are six circles of radius 1cm, 2cm, 3cm, 4cm, 5cm and 6cm. Each circle has either A or B as its centre.

(a) On the diagram, mark with a cross any points that are 4cm away from A **and** 4cm away from B.

(b) Now draw the locus of **all** points that are the **same distance** from A as they are from B.

12. For each part of the question, tick (\checkmark) the statement that is true.

(a) When x is even, When x is even, $(x-2)^2$ is even $(x-2)^2$ is odd

Show how you know it is true for **all** even values of \boldsymbol{x}

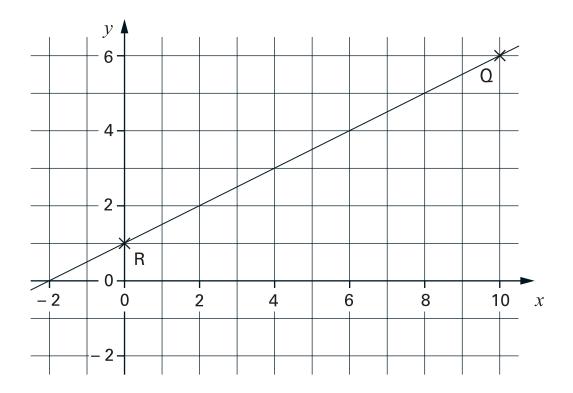

. . . . 1 mark

(b) When x is even, When x is even, (x-1)(x+1) is even (x-1)(x+1) is odd

Show how you know it is true for all even values of \boldsymbol{x}

. . . . 1 mark

13. Look at the graph.

(a) The **gradient** of the line through R and Q is **0.5**Show how you can work this out from the graph.

1 mark

(b) What is the **equation** of the straight line through R and Q?

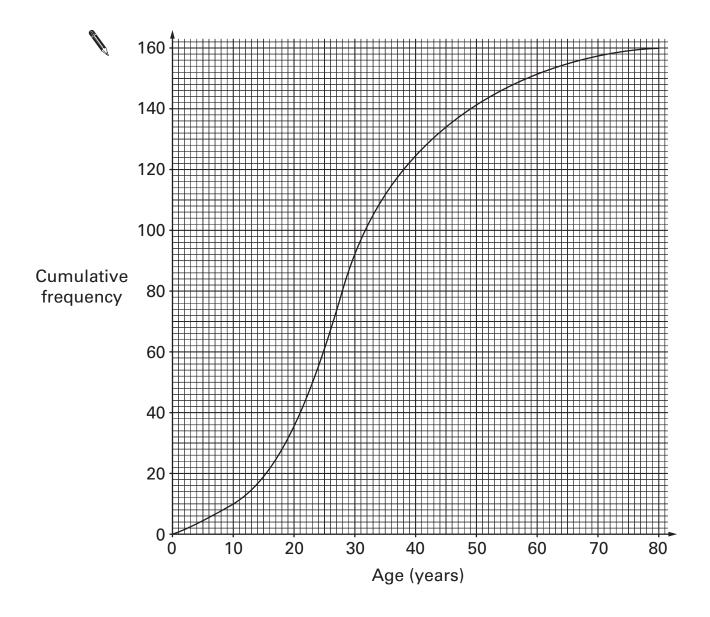

. . . . 2 marks

(c) Write the equation of a line that is **parallel** to the straight line through R and Q.

. . . 1 mark 14. Tom did a survey of the age distribution of people at a theme park.He asked 160 people.

The cumulative frequency graph shows his results.

(a) Use the graph to estimate the **median** age of people at the theme park.

1 mark

(b) Use the graph to estimate the interquartile range of the age of people at the theme park.

Show your method on the graph.

(c) Tom did a similar survey at a flower show.

Results:

The median age was 47 years.

The interquartile range was 29 years.

Compare the age distribution of the people at the flower show with that of the people at the theme park.

1 mark

15. (a) Solve these inequalities.

Show your working.

$$\frac{2(2y+7)}{3}\,<\,2$$

$$\frac{4(7-2y)}{12} > 1$$

(b) Kate is solving the inequality $y^2 < 9$

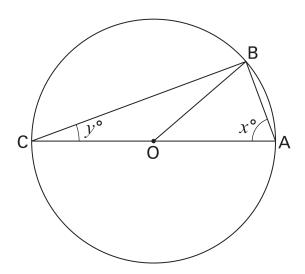

She says:

 $y^2 < 9$ whenever y is less than 3'

Kate is **not** correct. Explain why.

16. The diagram shows 3 points, A, B and C, on a circle, centre O.
AC is a diameter of the circle.

(a) Angle BAO is x° and angle BCO is y°

Explain why angle ABO must be x° and angle CBO must be y°

(b) Use algebra to show that angle ABC must be 90°

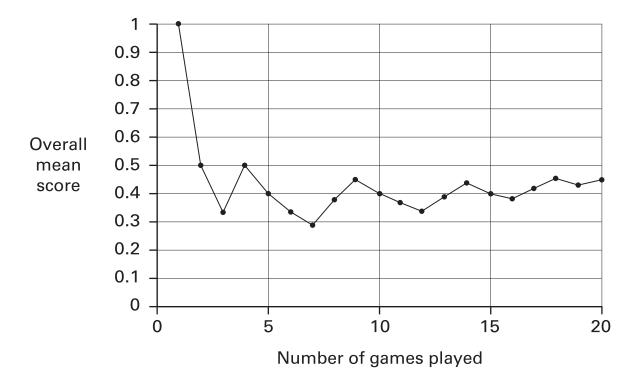

17. A girl plays the same computer game lots of times.

The computer scores each game using 1 for win, 0 for lose.

After each game, the computer calculates her **overall mean score**.

The graph shows the results for the first **20 games**.

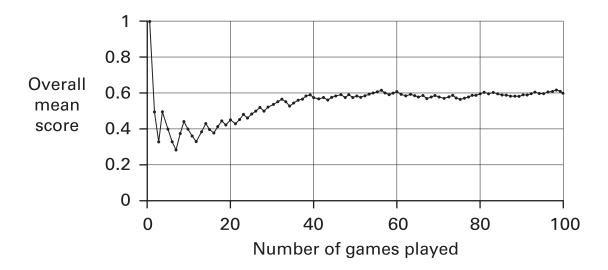

(a) For each of the first 3 games, write W if she won or L if she lost.

first game second game third game 1 mark

(b) What percentage of the 20 games did the girl win?

. . . 1 mark The graph below shows the girl's results for the first 100 games.

(c) She is going to play the game again.

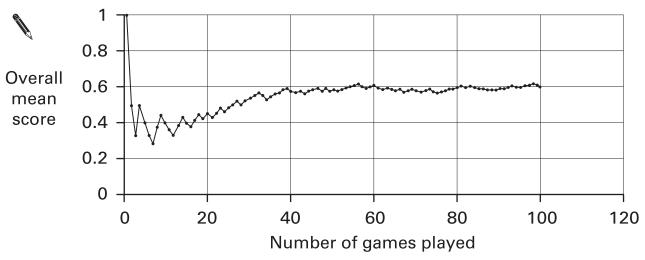

Estimate the probability that she will win.

1 mark

(d) Suppose for the 101st to 120th games, the girl were to **lose each game**. What would the graph look like up to the 120th game?

Show your answer on the graph below.

1 mark
